

21

Want of Labour. and want
of Wages. Well. I think the
last want is rather the worst
- not but that an intelligent man
a long while decides his mind
for some weeks. even without news
from his own

But this want of Labour. and want
of wages. how does it come to pass
There's plenty, we would think in the
world wide, and of this be a real
want. There must be plenty of men
to get. But where has it all
got to. That question leads me
to my second distinction. between
the two forms of want of life to men
who cannot live -
I'll put the distinction sharply before
you. I'll put the Modern Disease of
the. I'll put the other side of the
Two forms of want ...

II

22

Let us come to the second distinction
between the two forms of want. Let us
the distinction is - to have one legitimate
and another illegitimate. The other
legitimate and illegitimate, amongst the
forms of want of life.

The legitimate form of want is that a man
who works. should be paid the price value
of his work. And that if he does not do
what he is to do. he should have no claim
to keep it. And if it is to be done
then an intelligent man working hard
and living by his hands. should be
justified of an accumulated mass of wealth
which he has obtained right. The other
form of want is not work and the
wealth and independent power the large
wealth by - at the end of the day
there will be nothing for - poor in property
and wealth or want of life. and will
then naturally want to be able to do

The House shall sit

the water is not ...

the shape of gable. as the water branching
out to the river. and the river is a
of the water with the river which
with projecting hills down it.

It is not with in I think pointed
red to white surface. result

It is remarkable for having the
red forested daylight round it boldly
within the shell.

Its section is ...

... for a large to shell

It offers small water

has some section. I think

with the large small and

a small shell

the shafts of the water which

run up its side on it the very

rough. and then hollows are common

but all decided over.

The water B. of the which is that
of the main plateau around center
on each side of the shell. - a narrow
to narrow. It is common within
it. shell is shallow as long. all shallow
about it. with narrow.
Not bleeding down as it runs of
the three shells from side to side.

London water is about 5 miles long.
has a very fine lake. but there is
only one mountain in the country.
The lake is about 1000
feet high. the higher part
of the mountain was so concealed by
mist that we could not distinguish
it. There is a less celebrated mountain
The mountain contains several
with copper mines. He has some very
fine for a mine. The first is
only a few of the lakes in West
moreland & Lancashire. The largest
lake is in Lancashire but they are
usually from an intermediate source
or last more of a light brown colour. I
traced the solution down all the
way and saw it was a very small
very much and about five miles
and all the way down to the
the mountain from the head
of the lake at Windermere.
I had a very fine view of
the country and the mountains.
