

# The Star Trek™ Episode Guide Stacks version 3.0

Created by David R. Landis, © Oak Mountain Software 1991–1996

Special thanks to Timothy Lynch, Mike Brown, Mike Holtz,  
Jennifer A. Hawthorne, Matt Gomes, Mark Anthony Young,  
Bill Johnston, Fred Huemmerich, Diana Sunday, and Peter Vince.

These four Star Trek HyperCard stacks are designed to simulate the interface of a Federation computer screen while displaying information on episodes of the original *Star Trek* series (TOS), *Star Trek: The Next Generation* (TNG), *Star Trek: Deep Space Nine* (DS9), and *Star Trek: Voyager* (VOY). They allow you to scan the episodes and read detailed plot descriptions and Episode Notes; check out the writers, directors, and guests; and store information on your personal video tape collection (if you have one). Simply place all the stacks in the same folder and they will recognize each other.

## Hardware and Software Requirements

These stacks can operate on any Apple Macintosh computer with at least 4 megs of RAM, HyperCard 2.0.2 or higher, and System 6.0.5 or higher.

## How To Get Updates to These Stacks

Updated versions of these stacks will be available at the Oak Mountain Software World-Wide Web Site at "<http://www.universe.digex.net/~oakmtsw/>". They will also be available by Anonymous FTP from "[sumex-aim.stanford.edu](ftp://sumex-aim.stanford.edu)" and its mirror sites. Any new stacks will be announced in the Usenet newsgroups [comp.sys.mac.hypercard](mailto:comp.sys.mac.hypercard), [rec.arts.startrek.current](mailto:rec.arts.startrek.current), and [rec.arts.startrek.info](mailto:rec.arts.startrek.info).

## Comments and Suggestions

You can direct comments and suggestions on this stack to David Landis at [OakMtSw@aol.com](mailto:OakMtSw@aol.com), or write them to the following address. Remember, work on this stack is continuing. If you have any special features you would like included in an upcoming version, send in your suggestions. They will all be considered.

David Landis

## Description of the Main Screen

The main screen has been designed to resemble a Federation-standard display screen. It is still in black and white because HyperCard still has no reliable way of handling color for main screens, although there are color windows. This main screen has many elements, all of which will be described in detail. There is Balloon Help for System 7, and "pseudo Balloon Help" for System 6 — help is available for all elements on the main screen, activated by the "Help Mode" menu item.

The episodes for each series are stored in the original US broadcast order. This order cannot be changed, but Episode Lists you generate can be resorted into several orders.

The screenshot shows a HyperCard interface for the episode "The Way of the Warrior" from Star Trek: Deep Space Nine. The interface includes a title bar with the episode name and series name, navigation buttons for "Season" and "In List", and a sidebar with menu items like "Find", "Go To", "Build", "List", "Report", "Video", and "Quit". The main content area displays episode details: Writers (Ira Steven Behr & Robert Hewitt Wolfe), Director (James L. Conway), Stardate (49011.4), Air Date (Sep 30, 1995), Season (4), Number (73 (1 & 2)), and Program # (473 & 474 (718)). There are also sections for "Guests" (listing characters like Garak, Kasidy Yates, Gul Dukat, etc.) and "Episode Notes" (describing changes for the fourth season of Deep Space Nine). A status bar at the bottom shows "Recorded?" checked, "VCR Tape: Star Trek: DS9 #11", "Count: Index 4", and "Your Rating: 9".

## Episode Information

**Title:** The episode title is at the top of the screen. Any title that has "(an)" after it is from the Animated series, and any title that has "(M)" after it is a movie. (Note: it is not recommended that you change the titles of any episodes.)

**Writers:** This lists the writers of the plot and the story. The writers of the actual teleplay (script and dialogue) may be listed separately. Clicking on a name will create a list of episodes of everything that person has done in *Star Trek*.

**Director:** This holds the name of the director of this episode. Clicking on the name will create a list of episodes of everything that person has done in *Star Trek*.

**Stardate:** For *Star Trek:TOS*, Stardates were assigned simply to show progression of time, not to indicate where the episode appeared within the season. For *Star Trek:TNG*, Stardates in the 41000's are in the first season, the 42000's are the second season, etc. For *Star Trek:DS9*, Stardates in the 46000's are in the first season (DS9 started in TNG's 6th season), the 47000's are the second season, etc. For *Star Trek:VOY*, Stardates in the 48000's are in the first season, the 49000's are the second season, etc. If "(est)" appears after the Stardate, then it was not stated in the episode and has been estimated. Clicking on a Stardate, or the "Stardate" label will call up the "Stardate Calculator" window (see the "Stardate Calculator" listing in the "Star Trek Menu" section below).

**Air Date:** This is the date the episode was first shown on television (the first Saturday, for VOY it is the first Monday).

**Season:** This is the season number of the episode. If an "A" is part of the season, it was part of the Animated series. If an "M" is in the season, it was a movie.

**Number:** This is the episode number in broadcast order. The first is the number since the premiere of the series, and the second is the number within the season (Example: "101 (1)" is the 101st episode of the series, but the 1st of the season).

**Program Number:** This is the official Paramount program number of the episode. The numbers indicate the order in which the episodes were filmed, which may not be the order in which they were shown. Any episode ending in "A" is an Animated episode, starting with "ST-" is a movie, or starting with "V" is a Voyager episode.

## Pull Down Menus

**Guests** ▼ "Guests/Main Cast" button: This shows a popup menu where you can choose to view the Guests or the Main Cast.

**Guests:** This lists the actors who are not in the main cast. Guests who appear on the show frequently are shown in italics. Clicking on a name will create a list of all the things that actor has done in any *Star Trek* series.

**Main Cast:** This lists the main cast members who are on the show for this season. Clicking on a name lets you choose to create a list of all the episodes that feature that character in a major role, or a list of all the things the actor has done in *Star Trek*.

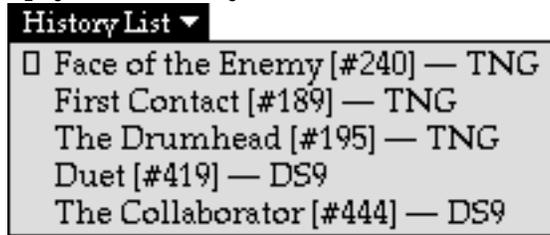

**Episode Notes** ▼ "Short Synopsis/Long Synopsis/Episode Notes" button: This shows a popup menu where you can choose to view the Short Synopsis, the Long Synopsis, or the Episode Notes.

**Short Synopsis:** This is a short description of the plot, used in the Episode List window and printed out in some of the reports.

**Long Synopsis:** This is the long, detailed plot synopsis of the episode.

**Episode Notes:** This holds information about the actors in the episode, plot lines altered or dropped, mistakes and inside jokes, and opinions (if "DL" appears after an Opinion, then they were written by me, the stack's author). There are also references to other episodes of *Star Trek* that are related, linked by hypertext links. Simply click on an underlined episode name followed by a number, such as "Klingons In My Dryer" [#123], and the stack will take you to that episode. These links operate between all four Star Trek stacks, allowing you to follow references to their origin.

 **"History List" button:** This shows a popup menu (shown below) containing a list of the last 15 episodes you have accessed (in the order you accessed them). Selecting an episode from this list takes you to that episode, even across stack boundaries. This list is empty each time you start the stacks.

## Screen Buttons and Controls

**Bajoran/Federation symbol:** Clicking on this symbol plays the theme for this series (if the sounds are on) and gives access to the credits screen.

**Left Arrow:** Clicking on this button shows you the previous episode, in the original broadcast order. Holding down the Option key and clicking here will take you to the first episode in this stack.

**Right Arrow:** Clicking on this button shows you the next episode, in the original broadcast order. Holding down the Option key and clicking here will take you to the last episode in this stack.

**Left "Season" Arrow:** Clicking on this button shows you the first episode of the previous season. Holding down the Option key and clicking here will take you to the first episode of the current season.

**Right "Season" Arrow:** Clicking on this button shows you the first episode of the next season. Holding down the Option key and clicking here will take you to the last episode of the current season.

**Left "In List" Arrow:** Clicking on this button takes you to the previous episode contained in an Episode List you've created. It will beep if the Episode List is empty. Holding down the Option key and clicking here will take you to the first episode in the list.

**Right "In List" Arrow:** Clicking on this button takes you to the next episode contained in an Episode List you've created. It will beep if the Episode List is empty. Holding down the Option key and clicking here will take you to the last episode in the list.

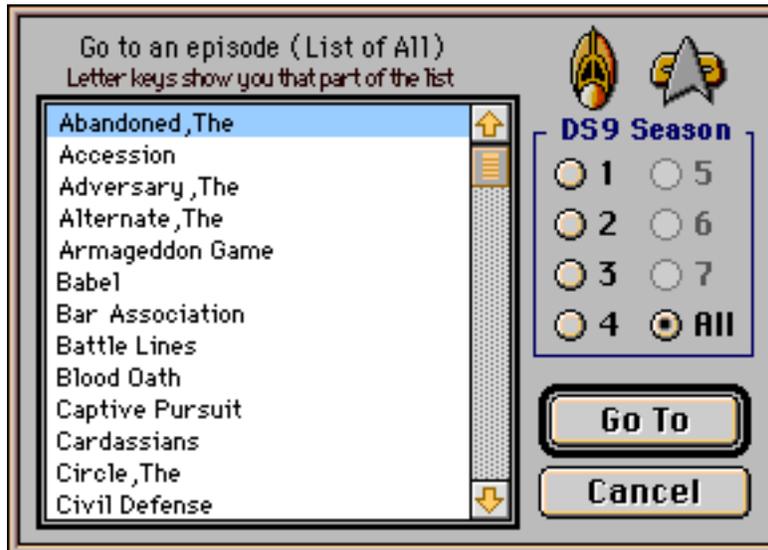

**"In List?" button:** This button in the upper-left of the main screen shows you whether or not the episode is included in an Episode List you've created. If the round button is solid black (as shown here), the episode is in the list. If the round button is empty, it is not. You may manually add or delete this episode from the Episode List by clicking on this button. If you add a new episode to the list using this button, it will appear with the description "You added "Klingons in My Dryer" [#123]" in the Episode List window.

**"Find" button:** This button calls up the "Find an Episode" window that allows you to enter one or *two* strings to find, and it allows you to limit the search to the synopsis or the episode notes if you like (by using the radio buttons on the lower left of the window). [Example: Find the episode with "Riker" and "birthday" in the synopsis.] When you have found something once, the "Find" button in the window changes to "Find Next". This window can also be accessed by pressing Apple-F. Holding down the Option key and clicking on the main screen "Find" button (or pressing Apple-G) does a "Find Next" without displaying the Find window.

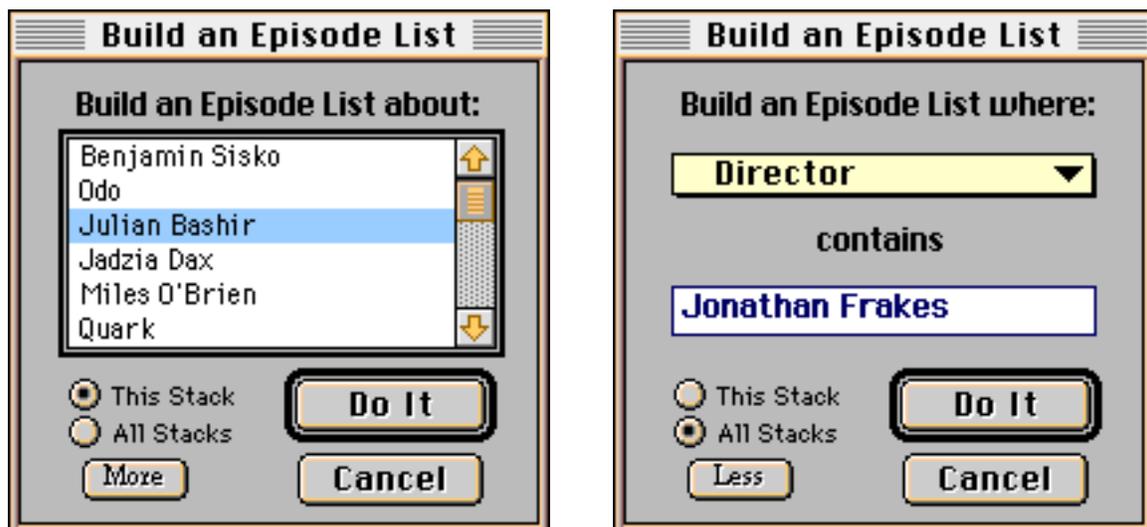

**"Go To" button:** This button calls up the "Go To" window that presents you an alphabetical list of all the episodes. By pressing a letter on the keyboard, you can move to that part of the list (Example: press the "S" key to see the part of the list where episode names start with "S"). You can also view an individual season of episodes in the order they were shown by pressing one of the "season #" radio buttons. Double-clicking on an episode name (or single-clicking and pressing the "Go To" button) will take you to that episode.

**"Build" button:** This calls up the "Build an Episode List" window that lets you build lists of episodes based on any conditions that you like (build a list of episodes "about Julian Bashir", for example).

Clicking on the "More" button (lower left of the window) will call up a more detailed screen (shown on the right), where you can build a list of episodes based on many different criteria. The popup menu at the top of the window lets you select which field to search in. If you select "Show Taped", "Show Seen", or "Your Rating", then additional popup menus will appear to aid your search. Otherwise, you must enter a name or other text to search for in the empty box. Clicking on the "Less" button returns you to the simplified window shown on the left.

Once the "Do It" button is pressed, the list is built and then displayed in a new Episode List window (see the next page). Once a group of episodes is in the list, you can print out various reports for them. You can view only the episodes in the list by using the "Listed" arrows on the main screen. You can limit the list to the stack you are currently in, or have all stacks scanned for episodes to include (by clicking on the "All Stacks" button).

**"List" button:** This button calls up the Episode List window, which shows all the episodes in the current list, the condition that makes the list unique, and the short synopsis of each episode in the list (when the episode name is clicked on). This allows you to figure out which episode you are interested in by looking at the short synopsis without having to manually scan through the stack. You can sort the list by air date, Stardate, your rating, and other categories by using the "Sort" popup menu just below the episode list (Note: the "Default" sort puts the episodes into the order they were originally shown, which is the order that they appear in the stacks).

You can clear the episode list with the "Clear" button so you can customize a list. Clicking on the header ("**about Julian Bashir**" in the example) will allow you to edit the header. You can then add episodes to the list manually using the "In List?" radio button at the top left of the main screen, adding or removing each episode to build your own custom list.

The "†" character after a title means that you have that episode on video tape. (Entering video tape and rating information is discussed further on.) If you have rated the episode (on the 1–10 scale), that will be shown in parentheses after the episode name, and your ratings will be averaged at the bottom of the list. If the last item on a line has a "»" before it, then that is the item that was used to sort the list (such as air date or Stardate).

**"Report" button:** This allows you to send a report to a printer or save it to a file. You can generate four types of reports (Full, Short, One Line, and Video) for all the episodes, the ones in an Episode List, or just the one you are looking at. The file or printed report for an Episode List will appear in the order that they have been sorted. The creator of the files can be set to any one of eleven programs (this is the word-processor that will open if you double-click on the file's icon, even though the file will be all plain text). You can print reports in large fonts (Times 10 for ImageWriters) or small fonts (Palatino 8 for LaserWriters).

**"Video" button:** This calls up the Video Information window, which shows a lot of information on when, where, and how the episode was recorded. It also has space for your opinion and rating (1 to 10 scale) of the episode. Some of the information in this window is reflected on the main screen. You can use the stacks to find which tape a specific episode is on so you need not physically search through your tape library to find it. This video information can be exported to a file, then imported into newer versions of this stack. This process is described further on. You can keep this window open as you move to other episodes, so you can see your video information.

**Your Information on This Episode**

Seen?  
 Recorded?  
 Commercials Cut  
 Stereo  
 Digital

Tape Name: Star Trek: DS9 #11  
 Tape Count: Index 4  
 Duration: 90 minutes  
 Date Taped: Oct 4, 1995  
 Channel: WDC A 20  
 Speed: 6 hours  
 Recording Details:

**Your Opinion**

Your Rating: 9

**"Recorded?":** This check-button indicates if you have this episode recorded on video tape. You can generate Episode Lists based on this.

**"Seen?":** This check-button indicates whether or not you have seen this episode. You can generate Episode Lists based on this.

**"Commercials Cut":** This check-button indicates if the recording of this episode has the commercials cut out.

**"Stereo":** This check-button indicates if this episode was recorded in stereo.

**"Digital":** This check-button indicates if this episode was recorded using a digital video recorder, instead of a standard analog one.

**"Tape Name":** This holds the name of the video tape that contains the episode.

**"Tape Count":** This holds the tape count where the episode is located on the video tape.

**"Duration":** This popup menu allows you to select a standard duration of the recording — 45 minutes (regular episode, no commercials), 60 minutes (regular episode, commercials), 90 minutes (double episode, no commercials), 120 minutes (double episode, commercials), or you can enter a custom duration.

**"Date Taped":** This holds the date you recorded the episode. It will convert your numeric date ("MM/DD/YY" or "DD/MM/YY") into the correct date format.

**"Channel":** This holds the name of the channel where you recorded the episode.

**"Tape Speed":** This popup menu allows you to select a recording speed for this tape. Because of the variety of names that tape speeds are called, this list is in hours.

**"Recording Details":** This holds any special details about the recording, such as you messed it up and need to rerecord it, or there was interference, etc.

**"Your Opinion":** This holds any personal opinion on this episode.

**"Your Rating":** This popup menu allows you to select a personal rating between 1 and 10 for the episode (1 is really bad and 10 is incredible). You can generate Episode Lists based on your ratings.

**"Quit" button:** This button quits the stacks.

### Video Tape Information

Some of your video tape information is shown at the bottom of the main screen. This is the same information shown in the Video Information window and it can be edited in either place.

**Recorded?:** This check-button indicates whether or not you have recorded this episode on video tape. You can generate Episode Lists based on this.

**VCR Tape:** This holds the name of the video tape that contains the episode.

**Count:** This holds the tape count where the episode is located on the video tape.

**Your Rating:** This popup menu allows you to select a personal rating between 1 and 10 for the episode (1 is really bad and 10 is incredible). You can generate Episode Lists based on your ratings.

## **"Star Trek" Menu Items**

The "Star Trek" menu (the right-most on the main menu bar) contains the following menu items. Note, on Classic all-in-one Macintoshes (9" screens), the menu bar is hidden because it would cover important information. Simply move the cursor to the top of the screen and the menu bar will appear. When you move the cursor away, it will disappear.

**"About the Star Trek stacks..." Menu Item:** This plays the theme for this series (if the sounds are on) and gives access to the credits screen.

**"Help Mode" Menu Item:** This toggles Help Mode on or off. When in Help Mode, System 7's Balloon Help will give you helpful hints on every screen object that you place the cursor on. With System 6, Help Mode causes small windows containing the same help text to pop up next to objects when you place the cursor on them.

**"Edit Mode" Menu Item:** This toggles Edit Mode on or off. When Edit Mode is on, you may modify all the text fields on the screen. When Edit Mode is off, all the text will be locked. Edit Mode must be turned off for any of the list building features to work (clicking on a name to see a list of episodes that person was involved in).

**"Sound On" Menu Item:** This turns the Federation computer sounds off or on. If the sound is off, only standard Macintosh system beeps will be used for warnings.

**"Clear Video Info..." Menu Item:** This clears all of your personal information about your video tape collection and your rating for each episod. Use this feature before you give a copy of these stacks to a friend. If you do give copies to your friends, be sure to make a copy of this document as well.

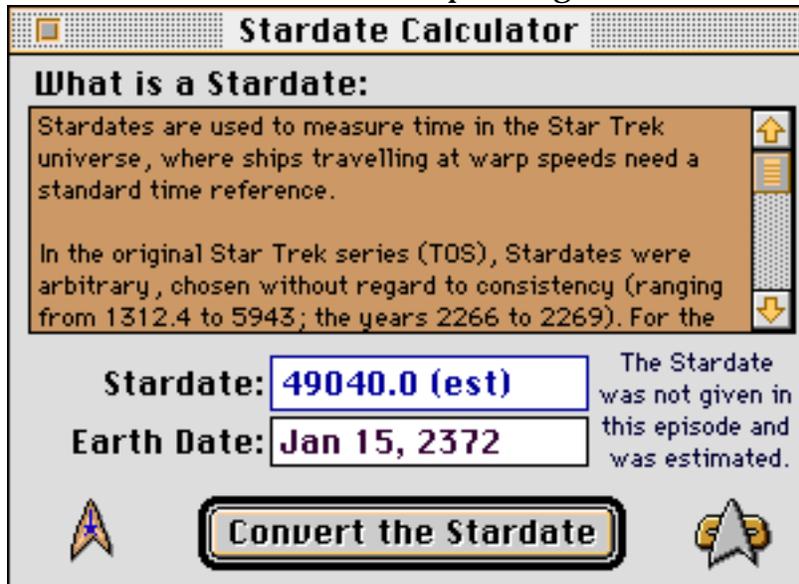

**"Export Video Info..." Menu Item:** This allows you to export a file containing all of your video information and ratings from an old version of the Star Trek stacks for importing into a newer version. See the next section for complete instructions.

**"Import Video Info..." Menu Item:** This allows you to import your video info and ratings from a previous version of the Star Trek stacks. It will first clear all information currently stored in the stack, then import your information. It will fill in blanks for all of the information not handled by older stack versions, and it will update any rating from 1 to 5 stars to the new 1–10 scale. See the next section for complete instructions.

**"View Character Info..." Menu Item:** This allows you to see a picture and biographical information for each major character in the *Star Trek* series you are looking at. Use the arrow buttons to move to the next or previous character. In the *Star Trek-TOS* stack, there is a button to switch between the original series information and the movie information. Note: if you do not have a color Macintosh, the character pictures will not be displayed, but all other information can be viewed.

**"Stardate Calculator..." Menu Item:** This shows you the Stardate Calculator that calculates the Earth Date for any Stardate used in the *Star Trek* universe (but *not* Stardates from Earth Dates). You can keep this window open and change episodes to see how the Earth Dates change. You can also enter your own Stardates and click on the "Convert the Stardate" button to see the corresponding Earth Date.

**"Star Trek-The Original Series" Menu Item:** This takes you to the *Star Trek-TOS* stack. If it is not in the same folder as the other stacks, this menu item will be disabled.

**"Star Trek-The Next Generation" Menu Item:** This takes you to the *Star Trek-TNG* stack. If it is not in the same folder as the other stacks, this menu item will be disabled.

**"Star Trek-Deep Space Nine" Menu Item:** This takes you to the *Star Trek-DS9* stack. If it is not in the same folder as the other stacks, this menu item will be disabled.

**"Star Trek-Voyager" Menu Item:** This takes you to the *Star Trek-VOY* stack. If it is not in the same folder as the other stacks, this menu item will be disabled.

## **Updating Video Information From Older Versions**

If you have entered information on your video collection into an earlier version of the stacks, you will want to transfer that information into version 3.0. Use the following steps to accomplish this.

- 1) Start the old version of the stacks.
- 2) Select "Export Video Info..." from the menu. This creates a file containing your video information.
- 3) Open version 3.0 of the stacks.
- 4) Select "Import Video Info..." from the menu. This will first clear any existing information from the stack.
- 5) Open the file you created in step 2. This will start the import process. When it is done, all of the video information from the original stacks will be a part of the new stacks, overwriting any existing information.
- 6) Make sure all of your video tape information transferred correctly before you delete the old version of your stacks.

## **Special Features**

- Each stack remembers which episode you were looking at last and opens the stack to that episode.
- You can add episodes to the stacks. Use the "New Card" menu item, or type Apple-N. The new cards will always be placed at the end of a stack. When you enter the name of the episode, that name will be updated in the title lists so you can view it with the "Go To" button. Make sure you spell the title of the episode correctly, otherwise updating to the next version of these stacks may have some problems.

## **Possible Problems**

There are several known problems and conflicts with the Star Trek stacks and other software and hardware. If you encounter problems other than those listed here, please report them to Oak Mountain Software.

- If you experience any strange crashes of HyperCard while running the stacks (an "error of type 15" has been seen), increase the memory allocation for HyperCard in its "Info" box. Set the memory to at least 2500K.
- If you have an Apple laser printer with an internal Fax card, reports that are to be printed may be accidentally faxed instead. The solution is to install version 8.2 or higher of the Laser Printer drivers, which corrects the problem. If the problem persists, unplug the phone line into the printer before printing. That might work. If it persists after that, call Apple service at 1-800-SOS-APPL for assistance on this error.

## **Version History**

### **Version 3.0 (released March 1996) (TOS, TNG, DS9, and VOY stacks)**

- Included complete information on DS9 episodes up to the end of season 3, and listing for DS9 episodes up to mid-season 4.
- Included complete information on VOY episodes up to the end of season 1, and listing for VOY episodes up to mid-season 2.
- Added a new Video Information window and new Video Information report.
- Altered the import video information to update from the old (2.1) format into the new format. Altered the export video information to conform with the new format.
- Added a new Stardate Calculator window.
- Changed the "Other Links" popup menu to a "History List" popup menu, which contains listings for the last 15 episodes visited.
- Added Tim Lynch's "End of Season" reviews (including his ratings) for seasons 4–7 of TNG, seasons 1–3 of DS9, and season 1 of VOY.
- Changed the Rating scale from 1–5 stars to a 1 to 10 scale to conform with Tim Lynch's 1 to 10 rating scale.
- Fixed a few small scripting problems.
- All new color character pictures for TNG, DS9, and VOY.

### **Version 2.1b (released late December 1994) (TOS, TNG, and DS9 stacks)**

- Fixed a problem importing video tape information.
- Fixed a problem exporting video tape information.

### **Version 2.1a (released December 1994) (TOS, TNG, and DS9 stacks)**

- Fixed corrupted resource that caused Macs without FPU's to crash.
- Fixed a few other problems printing reports of an Episode List.
- Added all information for the new *Star Trek* movie "Star Trek:Generations".

### **Version 2.1 (released November 1994) (TOS, TNG, and DS9 stacks)**

- Included TNG episodes up to the end of season 7.
- Included DS9 episodes up to the end of season 2.
- Included TAS episodes and Trek movies in TOS stack.
- Created all new color interface windows using WindowScript™ from Heizer Software.
- Added "User Ratings" (1 to 5 stars) and the ability to sort episodes by ratings.
- Added name searches; click on a Writer, Director, Guest, or Main Character to build a list of all episodes that person was involved in (across all three stacks).
- Added new computer speech sounds (controlled by "Sound On" menu item).
- Added new "View Character Info" window with color pictures and biographical information on each character in the series.
- Added color credit pictures.
- Fixed the popup menu problem (when the stack was used with HyperCard 2.0) by upgrading the HPopupMenu XFCN (by Jon Pugh) to version 3.2.2.

**Version 2.0 (released August 1993) (Now TOS, TNG, and DS9 stacks)**

- Included TNG episodes up to the end of season 6.
- Created the new DS9 stack, with episodes for all of season 1.
- Created the new TOS stack, with all 79 episodes listed.
- Keep "Help Mode" and "Edit Mode" on across all three stacks.
- Keep the same fields visible when changing stacks.
- Added new "Episode Notes" field and entered a huge amount of new information for all three stacks.
- Addition of HyperText hot-links on episode names in the "Episode Notes" field. Click on an episode name to go to that show's listing.
- Added new "Go To" dialog box with alphabetic list, and seasonal lists.
- Added previous and next "Season" arrow buttons.

**Version 1.2 (released January 1993) (TNG stack only)**

- Included TNG episodes up to mid-season 6.
- Added new Large Font reports for people with dot-matrix printers.
- Added full-color system icon for System 7 users.

**Version 1.1 (released June 1992) (TNG stack only)**

- Included TNG episodes up to the end of season 5.
- Added a "New Show" feature so users can add information.
- Added a routine to choose a format (which word processor) for report files.

**Version 1.0 (released January 1992) (TNG stack only)**

- Baseline version of the TNG stack, including episodes up to mid-season 5.
