

Sapphire Star Nozzles 1

Sapphire Star Nozzles

'Sapphire Star Nozzles' is an amazing new collection of nozzles for Painter™ and Painter 3D™, PC Windows 95, 98, and NT and Power Mac system 8 or later.

What does this amazing package offer you?

Adds a vast range of new brushes to your painting set.

More brushes, more originality, more incredible images. Our 120+ nozzles are featured in this pack and they form the basis for thousands of new effects and image creations.

What does it include?

A variety of nozzles in star and starburst style, in a variety of colours and styles.

The possibilities are limitless.

Star Nozzles will form the basis of your own nozzle sets, or can be used as a basis for the pattern brushes that play an amazing role throughout the brush set of latest version of Painter™, or these nozzles can be used as an endless supply of graduations, textures, grains, texturemaps, bump maps, reflection maps, blobs, tiles, and you can even use them to paint with!

Using the new advanced paint technology in version 6, nozzles add even more to your creativity. You can fill a picture or an object with nozzles, fill text with nozzles, use these nozzles in stroking selection paths.

The only limits, your imagination.

Instant art, or subtle effect... ideal for surreal, weird, photo-realistic... all kinds of art

Nozzles can also form the basis of add-ons to other products such as Corel PhotoPaint 9™. Though they must, of course, be converted to RIFF format before use in PP.

Anything else?

The nozzles are stored as nozzles libraries for access to scaling of nozzles and nozzle display. The nozzles can be extracted from the nozzles library and then manipulated to create a whole new range of nozzles for your own use, such as having different colours or sizes or multiples of nozzles or angled nozzles and so on. The nozzles set forms just the basis of a possible huge set of new brush effects.

The manual includes a catalog of all the effects
