he web page has been checked, and has not changed since it was last visited.

he web page has been checked, and it has changed since the last time it was visited.   The icon will reflect whatever web browser you use with WebChecker.

he web page could not be checked.

he web page is currently being checked by WebChecker.

ebChecker is currently communicating with the web server, to determine its status.

ebChecker timed out while checking the web page.

he web page does not exist.

Comment Indicators

"Unknown Error"
What it says - the web page information could not be parsed.

"Page Protected"
You do not have access to the web page.

"Invalid Header Date"
WebChecker uses the HTTP "HEAD" command to query the web server on the status of the web page.   Some servers don't return the appropriate information, typically because they build web pages dynamically, and web pages generated this way can return this type of error.
