1.2 Introduction

Introduction

I've got a crap monitor, it flickers when showing interlaced displays. I've also
 got MWB installed
 on my machine, I can live with the stretched icons (some drawers come in those
 proportions anyway!).
 What I can't live with is the backdrop pictures (not the patterns), you can tell
 they are stretched
 too much (and you can only see half the picture). You can't half them either
 because when you half
 dithered pictures they look terrible, so Hires MagicWB Backdrops was born. Hires
 MagicWB Backdrops
 is simply a collection of Hires MagicWB backdrops.

1.3 Disclaimer & Copyright

Disclaimer

You use these backdrops at your own risk. I will not be responsible for any loss
 of data or damage
 to your machine in any way. This software does NOT have a warranty.

Copyright

These MagicWB backdrops are is copyright to Ashley Hales. You may put them on the
 Aminet, PD disks,
 or anything else you fancy. If the software is changed or parts of it are used
 for something else
 you must mention my name in the doc/guide.

1.4 Requirements

Requirements

You need the following things to use these backdrop pictures:

- An Amiga
-

·WB 3.x or above

It is recommended you have the following things when using these pictures:

· The MagicWB package (by Martin Huttenloher)

1.5 Usage

Usage

You may notice that these pictures don't cover the screen. I haven't got any pictures that completely cover the screen. I suggest that you load them up into a paint package and position them where you want them. It may help you if you make a template of the workbench screen so you know where the pictures will appear (see Example). Notice on the example the title bar is at the bottom of the screen. This is because workbench places the pictures in the top left of the window, behind the border, so the top of the picture must be in line with the top left of the window. If the title bar is covered by the workbench window then don't put the title bar at the bottom of the screen.
