in 4/72

\_\_\_\_\_\_

This software was written in a very system friendly way, so it may not be as fast as a common hardware hack would be.

#### Requirements:

- Kick 2.05 (V37) or higher
- For Screenmode requester: V38+ of asl.library
- About 160 KB of Chip memory
- At least 300 KB free Fast memory
- MC68000 or higher
- OCS machine
- TV or Monitor
- Harddisk, with at least 0.5 MB free
- Lemmings 2 Harddisk version

(can be acquired from Aminet:game/patch/lems2HD.lha, CD 7 or Set 2 Disk C or directly from me (only the patch, not the game!)).

#### Recommended:

- Kick 3.0 (V39) or higher
- 2 MB of Chip memory
- 2 MB of Fast memory
- MC68020 or higher
- AGA machine
- Multiscan Monitor
- Commodities/AutoPoint or similar tool

#### Developed on:

- A4000/60 with Kick 3.0, 9 MB Fast
- 17" Multiscan Monitor
- Flicker fixer and CyberVision64

### 1.4 How To Install The Editor

Main

Legal

Intro Menu

Keys

Windows

FAQ

History

Register

Installation

Installation is normally done using the Installation Script.

Please note that it's not done by just copying the Editor to your harddisk. PrepL2 is an essential part of the Installation. It installs the patch and creates some files and directories on your harddisk. Please read the

Legal~Issue

in 5/72

about this patch.

The supplied installation script is also able to remove the editor from you harddisk again.

### 1.5 Introduction

Introduction

\_\_\_\_\_\_

The Lemmings 2 Level Editor is a (quite obvious) Level Editor for Lemmings 2 by DMA Design. You will be able to create up to 8 world files for all 12 tribes (+ Practice levels), each one containing 10 Levels (that's up to 960 normal and 32 Practice levels in total).

Summary of features:

- Selectable Screenmode (runs on ECS or AGA chipset or even on graphic boards).
- Font sensitive menu and gadget layout.
- Efficient built-in file caching system.
- NewLook Menus on Kick 3.0 or higher.
- Tries to keep new look with different palettes.
- Tries to keep everything readable on Kick 2.0, which doesn't support full DrawInfo.
- Online Help in menus.
- Window positions are saved along with the preferences.
- Iconify.
- Plot, line and bar drawing modes.
- 64 KB Undo/Redo buffer with unlimited steps.
- 100% assembly language code.
- No hardware hacking!
- Has been tested with Mungwall and Enforcer (+ Memory Protection option)

However, it is not possible to create a new tribe with new graphics etc.

General Information on Levels

Lemmings Levels can be seperated into three main parts:

1. The Level Map, which is build up using 16\*8 pixel sized predefined block

in 6/72

graphics, both transparent and solid for the Lemmings.

The Levels can be of varying sizes, and can be visibly reduced by a limiting border. Lemmings going past this border will vanish.

Manipulating the map can be either done using Raw Blocks, these are single blocks, selectable from about 600 different blocks, or Block Elements. The Block Elements are predefined chunks of blocks and are displayed shrinked to 1/4 of their actual size, because the layout is taken directly from the graphics file and the graphics would be to wide (320 pixels).

There are three drawing modes to be applied to both Raw Blocks and Block Elements: Plot, Line and Bar. All drawing operations can be undone and redone multiple times.

The Raw Block and Block Elements windows can be sized, and normally don't display all the available blocks at a time. Pressing Space or the right mouse button will flip to the next page of blocks.

2. Objects, placed over the map, like starts, exits, traps, water etc.

There can be up to 64 objects on each levels. Objects normally should not overlap, but this is not tested for. Objects are drawn in the order they have been created.

All Objects can be dragged, some of them can even be sized. The Objects on the map are displayed together with Object Indicators.

More information on Objects see

here

3.

Level preferences

-----

### Background story

-----

Having enjoyed Lemmings 1 and it's Data Disk, I immediately bought Lemmings 2 - The Tribes on release in 1993. Sadly enough, I made it through in a short time. I also bought All new World of Lemmings (Lemmings 3), but was quite disappointed by it.

So in the beginning of 1996 I had the idea of making a Level Editor for the great game Lemmings 2. I had a first look at the files on the disks: I

in 7 / 72

found the graphic files of each style, but not the actual level files. So I examined the main executable and finally found them there, RNC packed (which was no problem to decrunch because I had used a RNC decrunching routine long ago in my AMOS AMCAF-Extension (have a look at this one, if you're an AMOS programmer!)). Then I started to write a Level viewing program in AMOS, which was quite easy, except of finding out images of the level objects. I just couldn't find out, which information the chunks contained. So I gave up.

One night, I had an idea to get this data, and after two days of trial and error, the level viewer was finally finished.

But then there was the next problem: The level files were in the main program. How could I get Lemmings2 to load the levels instead of unpacking them from inside? There was only one solution: Using a disassembler to find out, where the level decrunching routine was. After one week of mindboggling decoding, I finally found it. I wrote a quick patch to load the levels. But that was not enough: I had to create some kind of selection screen. So I went into more resourcing and another week passed before I got a nice screen with fading and using the built-in text routines of Lemmings.

Now I had to write a small program that installs this patch. That was hardly any work and was finished soon. Now I could start coding on the main editor. Taking routines from other projects I'm working on, it gave me some quick start off. But it took me one whole month to finish it to it's first usable version V0.7, which I gave my younger sister to create some levels with. After one week, I was nearly finished with the general stuff. So I started writing this manual (15-Aug-96). To do list: Object optimizer, Keyfile/Registering code, Menu and Button Online Help, Trace Mouse, general beta-testing.

Well, it's now the 26-Aug-96, and I'm nearly finished (V0.99). Still, the manual is pretty incomplete...

#### Windows

Note: Using an Autopoint utility like the one supplied on the workbench disk (in the Tools/Commodities-Drawer) or MultiCX, makes the editor much simpler to use, as the windows don't have to be activated by hand. If you don't want use autopoint, don't forget you can only activate the level window by either clicking into (can be very annoying), or pressing the Return key.

#### Level Map Window:

This is the backdrop window, which is used to display the level map. Normally, this window is as big as the screen (exception see here

What you actually can see on the map is controlled with the

Show -Prefs.

#### Raw Blocks Window:

Holds all the Raw Blocks available. Clicking on a block will make it the active one, and the mode will change to 'Raw Blocks' (see Screen Title).

If you click on the same block a second time, all blocks will be ghosted, indicating the block now being transparent.

Drawing with a transparent block 0 (the empty one) will not erase the graphics underneath but make keep them as they are, but making them transparent.

in 10 / 72

Depending on the size of the window, it might not show all the blocks available. Switching to the next page is either done by pressing the Space-key or clicking with the right mouse button.

Using Raw Blocks you can create a lot of never seen level layouts, for example fake objects (blocks, that look like solid blocks, but aren't!).

Note that clicking on a object or drag nob will switch to no-op mode after the operation, so you need to reselect the block before you can draw on the map again.

If you have selected the

Picks up

mode for the

Right Mouse Button

you can also select the block you want to draw with using the right mouse button on the level map.

#### Block Elements Window:

Block Elements are predefined images which are often needed during level design. I took them directly from the graphics file. It seems as if the original Psygnosis level editor used a 320 pixel wide Lowres screen, where you could select these Block Elements. However, 320 pixels is too wide for my Editor (or do you prefer to have a 320 pixels wide window on your screen all the time?), so I had to shrink them down to 1/4 of their original size (half width, half height). Don't forget this fact. The graphics can be

interpolated
to get better results.

Block Elements are shown on the map while you move your mouse around, making it easier to figure out where it would be best to place them.

Selecting Block Elements is pretty similar to the procedure with Raw Blocks: One click selects the Element, another one toggles transparency.

Page flipping works exactly the same like above.

Note that clicking on a object or dragging/sizing nob will switch to no-op mode after the operation, so you need to reselect the block before you can draw on the map again.

Picks up doesn't work for Block Elements.

#### Objects Window:

This window contains a listview gadget with all the objects available. Selecting one will take you to the Place Object mode, so you can paste the object to the map. You can have up to 64 Objects on the map. If you run out of Objects, the

Object Optimizer

in 11 / 72

might help.

Unlike the blocks on the map, objects can be dragged by clicking on the dragging nob in the top left corner of each object.

Some objects can be sized: They have a second nob in the bottom right corner.

If you want to delete an Object, you can do this by selecting it (and then pressing the Del key), or alternatively, if you've set the

Right Mouse Button

mode to

Deletes

, just click on an Object with

the right mouse button.

More information about Objects can be found

here

Level Preferences Window:

See

here

### 1.8 Information on the Patch itself

Main

Legal

Information on the Patch itself

The installation script installs a patch into Lemmings which makes it possible to load up the custom levels. Everytime the main code tries to load a level, the L2 Editor Patch Screen comes up, giving you the possibility to select your world file you want to play.

Then you've got three choices:

### 1. Accept and sleep:

The patch will take your setting for all futher loading activities and will never show up again. If you want to change it again, press and hold in 12/72

the right mouse button when you expect the program to show up.

#### 2. Accept:

Just accept this setting, but show up everytime Lemmings is going to load a level.

#### 3. Cancel:

Ignore your setting and load up the original levels.

If your world file is not in the list of selectable files, try to update the catalogs from within the Editor.

History

Register

Object Information

\_\_\_\_\_

All Objects can be dragged to any position on the map, as long as they stay completely in the map. Dragging is done by pressing the left mouse button when the pointer is above a small nob in the top left corner of the object. Keep the button pressed and move your mousepointer, the object will follow into it's new position until you release the button again.

Some Objects have a second nob in the lower right corner, which is used to change the Objects size. Sizing is done in a similar way to dragging.

There's a maximum of 64 Objects on the each level. The amount may be reduced using the

Object Optimizer

Try to keep Objects off overlapping. Objects are drawn in the order they have been created. Deleting an Object will create a gap in the Object list, which will be filled when you create a new Object.

For the following Objects more information available:

Start

in 13/72

Exit & Exit (solid)

Water (top & bottom)

Solid Blocks (any size)

Roundabout

Cannon/Catapult

Dino/Plant Catapult

Trampoline

Sand Container & Toggle

Teleports

Steam Leak & Toggle

# 1.10 Object: Start

Main

Legal

Intro

Menu

Keys

Windows

FAQ

History

Register

Object: Start

This is the Object the Lemmings start from. There always must be at least

one Start Object, although you can place a lot of them around the level.

Keep these objects within the level boundary!

How fast the Lemmings leave the Start Object can be changed with the Release Rate slider in the

Level Prefs

# 1.11 Object: Exit

Main Legal in 14/72

Intro Menu Keys Windows FAQ History Register

\_\_\_\_\_

Object: Exit

\_\_\_\_\_

This is the Object all the Lemmings should walk into to complete the level. If you're not creating a

Practice

level, there should be at least one,

although there can be as many as you like.

You have to be a little bit more careful when it comes to exits. The exit will not work if you do it wrong.

There are two types of exits: Normal ones and solid ones. The first type just contains of the exit, the latter have one or two solid blocks underneath.

Normal exits can placed anywhere as long there is NO solid block underneath them. If you need a solid block below the exit, use a solid exit instead.

Solid exits can be placed anywhere on the map. Be sure you don't overlap the solid block with other solid blocks or the exit won't work.

# 1.12 Object: Water

Main

Legal

Intro

Menu

Keys

Windows

FAQ

History

Register

Object: Water

\_\_\_\_\_\_

Water always consists of two parts: The top part and the bottom part. The top part is not harmful for the lemmings in any way. The bottom part really is water with all it's dangers.

Note that both parts can be sized, so please don't place single water pieces all over the place.

in 15/72

Also note that a Lemming equipped with Swimmer and Magnoboots can walk underwater!

## 1.13 Object: Solid Blocks

Main

Legal

Intro

Menu

Keys

Windows

FAQ

History

Register

.\_\_\_\_\_

Object: Solid Blocks

\_\_\_\_\_

These are blocks which cannot be destroyed by anything. Solid blocks can be sized and you should use this feature whereever possible.

You might create levels with graphics that look like solid blocks, but aren't. But don't use this feature too often because it's very irritating and annoying.

## 1.14 Object: Swing/Roundabout

Main

Legal

Intro

Menu

Keys

Windows

FAQ

History

Register

Object: Swing/Roundabout

This is the famous Roundabout which is found on many levels. Note that you should not place too many of them on your map, because Lemmings cannot cope with too many chains.

Also note that the swinging frequency is dependant on the length of the chain, which can be changed by sizing the Roundabout up and down.

in 16 / 72

## 1.15 Object: Cannon/Catapult

Main

Legal

Intro

Menu

Keys

Windows

FAO

History

Register

Object: Cannon/Catapult

\_\_\_\_\_\_

Cannons always shoot the Lemmings to the left where as Catapults eject them to the right.

Neither the cannon nor the catapult itself is displayed on the map.

Note that catapults need at least three chain parts to operate correctly.

There's a maximum length for all the cannon/catapult chain segments, so if anything goes wrong on your level, reduce the amount of cannons/catapults or their lengths.

# 1.16 Object: Dino/Plant Catapult

Main

Legal

Intro

Menu

Keys

Windows

FAQ

History

Register

Object. Dine/Dlant Catanult

Object: Dino/Plant Catapult

These are lemming catapulting Objects.

Lemmings passing the Dino Catapult will be shot to the right. Can  $% \left( 1\right) =\left( 1\right) +\left( 1\right) +$ 

Cavelem

Tribe.

The Plant catapult only works if the Lemmings fall from above onto it. Can only be found in the

Outdoor

Tribe.

in 17/72

# 1.17 Object: Trampoline

Main
Legal
Intro
Menu
Keys
Windows
FAQ
History

Register

\_\_\_\_\_

Object: Trampoline

\_\_\_\_\_

Lemmings falling onto a Trampoline will jump much higher, landing softly (in most cases). The height of the jump is determined by the position the Lemming fell onto it.

# 1.18 Object: Sand Container & Toggle

Main Legal Intro Menu Keys Windows FAQ History

Register

Object: Sand Container & Toggle

These are special objects never used in the original levels, probably due to a bug (see below). These objects are only available in the

Egyptian and Shadow Tribes.

The Sand Container contains a liquid that is similar to the one a Filler Lemming spreads. If the area below the container empty, it will release it's liquid from the beginning of the level 'till a Lemming disables it using the Sand Toggle.

If you select a Sand Toggle or Container, the corresponding Object will be

in 18 / 72

marked with a box in green colour (if available).

Warning: Bug!

The Sand Container needs some special care: There's a bug in Lemmings that will cause the game to crash under right conditions: If the sand reaches the opening hole of the Sand Container, the game freezes. To avoid this bug, always make sure that the sand can run off the level somewhere, or limit the time so that it can't reach this height. Have a look at the provided levels to get the grip of it.

### 1.19 Object: Teleports

Main Legal Intro Menu Keys Windows FAQ History Register

\_\_\_\_\_

Object: Teleports

\_\_\_\_\_

Teleports are only available in the

Space

Tribe. They teleport one

Lemming at a time to another Teleport Object.

To see the destination of a Teleporter, select it and you'll get a green box around the target Teleporter.

NEVER place an odd amount of Teleporters on a map, this will lead to unpredicable effects or even crash you computer when playing Lemmings 2.

### 1.20 Object: Steam Leak & Toggle

Main
Legal
Intro
Menu
Keys
Windows
FAQ
History
Register

.....

Object: Steam Leak & Toggle

in 19 / 72

Steam Leaks are only available in the

Sports

Tribe. Lemmings running

into the steam will be ejected in the direction the steam blows.

Steam Leaks can be turned off and on again using the corresponding Toggle. To find out which Toggle or Leak will interact, select the Object and a green box will appear on the target object.

NEVER let two steam leaks overlap that blow into different directions, this may crash Lemmings 2.

Currently, the steam sprites are displayed as pipe parts, but I hope you can imagine what it should be :-)

Hall of Levels

List of available Levels in no order. Last time updated: 03-Sep-96.

Thanks to their creators for supplying them!

Classic:

Beach:

Cavelem:

Insane by Thomas 'Lofwyr' Büttner. Containing

: Well, probably easy, if you can cope with - Jumping Jack

the timing.

: Easier form of Jumping Jack. - Bombing Jimmy

- Zum Aufwärmen : It's just easy. Well, that's what I say.

Circus:

Gaauuuudiii by Melanie 'Panther' Hodges. Containing

- 0815 : Pretty easy level. Timing is everything ;)

- The running Lems : Cannot be called absolutely easy. in 20 / 72

```
- Tame that wildcat!
                              : Nerve killing wicked level (timing!).
    - McLemmans riddle
                              : Take care of those invisible traps.
Egyptian:
  Anything but funny by Melanie 'Panther' Hodges. Containing
    - Don't believe u'r eyes : Wicked due to many illusive traps.
                      : Easy, but watch your time!
    - Up and down...
    - Oh no! I'm falling : Can't be easier ;)
    - What do u really see? : Not everything is real...
Highland:
  Scotland Yard by Melanie 'Panther' Hodges. Containing
    - Too much water : Easy... actually?!?
    - A long way home...
                             : Don't forget the other side.
    - Stressy thing!
                             : Release them at the right moment, otherwise
                                it'll be quite narrow.
    - Take a Trip down there : Take care which exit you want to take.
Medieval:
  A Hard Days Knight by Thomas 'Lofwyr' Büttner. Containing
    - Aller anfang ist schwer : Many ways home.
Outdoor:
Polar:
Shadow:
  Impossible Mission by Chris Hodges. Containing
   - So near and yet so far : Pretty easy, if you use the shortcut.
   - Building Skyscrapers : Found a little bug in Lemming Cood Luck, Jim : Weird and wicked level. Think first!
    - Labyrinth of Illusion : Hard, although you've got plenty of tools.
    - Oh, it's not that easy! : Looks easy, is easy, but not for you ;-)
Space:
  Intergalactic Cries by Thomas 'Lofwyr' Büttner. Containing
    - Teleporter Mania
                              : [comment ommitted]
  Lost In Space by Melanie 'Panther' Hodges. Containing
    - Oh no! Not again!
                              : It's not that hard, really.
Sports:
  I hate Sports! by Chris Hodges. Containing
    - Freestyle Building Compo: Do what you want to get to the exit.
    - Spell Tarzan with an 'L': <sigh> I only made it once!
    - A long way down - and up: VERY hard, this one.
                               Hint: Use the floater above the trampoline.
                         : Also a pretty hard level.
    - The Chaos Engine
    - The Magic of Magno Boots: A new usage for the fab Magno Boots!
    - Oh! No more Lemmings! : Pretty easy...
```

in 21/72

# 1.22 Frequently Asked Questions

Main

Legal

Intro

Menu

Keys

Windows

FAQ

History

Register

Frequently Asked Questions

\_\_\_\_\_

- Q: How do I create Practice Levels with different Tribes?
- A: Simple thing this is... first design your level with your prefered tribe, then save it to disk (or copy it to your clipboard) and load it into your Practice world file.
- Q: I have designed a level, but everytime I want to play it, my computer crashes. What am I doing wrong?
- A: First check your level name for illegal characters (>127), then look if

in 22 / 72

you use too many roundabouts or too many catapults/cannons. Also try to reduce the chain lengths of cannons and catapults or temporarily remove them. If this isn't going to solve the problem, send me the level and I'll try to find out what's wrong.

- Q: I'm using Exits in my level, but somehow, the Lemmings just walk past them. What the hell is happening?
- A: You probably have made a little mistake with solid blocks underneath the exit. Refer to the

Object Information

on

Exits

.

- Q: The Blocker (or Attractor) Lemming doesn't work!
- A: The Blocker only works with the Classic Tribe. The Attractor doesn't work in the Classic Tribe (there had been no Attractor in Lemmings 1)
- Q: I'm running out of objects all the time. I've used a lot of solid blocks and water.
- A: You're probably not using the sizing feature for solid blocks and water. Try to replace single objects with one long object stripe. Or if you're registered, just run the

Object Optimizer

If this doesn't solve the problem, try to replace solid blocks with fake ones (using Raw Blocks), where the player won't notice the difference.

- Q: I've tried hard but I can't get past the first level(s). How can I play the other ones without having made the predecessors?
- A: There's a cheat to play all the levels. On the Lemmings 2 Title screen click in all four corners until you hear a "Let's go" sound (not the one from the music).
- Q: Why do I lose 48 bytes each time I start and quit the program?
- A: This seems to be a bug in the amigaguide.library or the datatypes and is not a problem of the Editor itself.
- Q: Then I play Lemmings on my Computer, the sound effects disappear after a short while. What's wrong?
- A: Dunno, but on my 68060 it disappears if I don't turn off the music. Might be a bug in the med replaying routine.

# 1.23 How To Register

Main Legal Intro Menu Keys Windows FAQ History

Register

\_\_\_\_\_

#### How To Register

\_\_\_\_\_

I spent a lot of work and time in the Lemmings 2 Level Editor, so I think it's only fair to demand a little reward, if you want to use my program on a regular basis.

If you want to register, please fill out the Registration Form or send

me a normal letter with the necessary information.

What you get:

- The latest version of the Editor and a personalized keyfile, which will enable all functions in the Editor.
- About 30 or more new levels to play with.
- Full support concerning the software.

The following things are not possible in the unregistered version:

- Edit other Tribes than the Space Tribe.
- Writing back other levels than Level 1.
- Loading and saving levels to disk.
- Using the object optimizer.
- Change every level parameter (name, rel. rate, time etc.).

\_\_\_\_\_\_

Registered Software License Agreement

\_\_\_\_\_\_

The author of this software will grant the Licensee a limited, nonexclusive right to use the program Lemmings 2 Level Editor and it's associated files on a single machine. The producer will hand out a special identification file called the key file to the Licensee. This key file will enable the Licensee to fully use this software package according to the terms of this license. The key file is strictly for personal use by the Licensee only. You may not duplicate, distribute, hire or sell a keyfile. Any disclosure of they key file will invalidate the license and the key file itself.

The Licensee will be held liable of any damage arising out of the disclosure of the keyfile. The product is provided as is without warranty of any kind, either express or implied, statutory or otherwise, including

24 / 72 in

any implied warranties limitation of non-infringement, merchantability and fitness for a particular purpose. The entire risk as to use, results and performance of the product is assumed by you and should the product prove to be defective, you assume the entire cost of all necessary servicing, repair or other remediation. In no event shall the producer of this product or it's resellers be liable for any property damage, personal injury, loss of use or other indirect, incidental or consequential damages, including without limitation, any damages for lost profits, business interruption or data which may be lost or rendered inaccurate, even if I have been advised of the possibility of such damages. This agreement shall exclusively be governed by the laws of the Federal Republic of Germany.

Payment

There are four ways to pay the money:

#### Cash:

If you want to pay in cash, the Shareware fee is 30 DM or US\$20 or £15). Other currencies cannot be accepted. There shouldn't be any problems if you place the bills in the envelope in a way they can't be seen from outside.

Cheques inside Germany:

Just send me a cheque for 30 DM.

Cheques outside Germany:

It costs me a small fee to accept foreign cheques, so I have to charge you extra (sorry): Please send me a cheque for 35 DM or US\$24 or £17 or the equivalent amount in your currency.

Bank transfer:

You can transfer 30 DM to my bank account:

Christopher Hodges Account 359 68 63 Sparkasse Fürstenfeldbruck BLZ 700 530 70

Please don't forget to include your full name, so I'm able to see who transfered the money.

#### Special gifts:

The guys listed here may get a free copy (or in exchange to a registration on their software?):

-----

How To Get Your Keyfile

-----

### Snail-Mail:

The keyfile and the latest version of the Editor will be sent on a floppy disk and might contain some other productions I made.

#### E-Mail:

If you want to get your keyfile via electronic mail, please send the filled out registration text, along with your PGP-key (you can extract it using "PGP -kxa"), because I'm only shipping PGP-encrypted keyfiles! Bank transfer is recommended. I'm not going to send away keyfiles without PGP-encryption.

Register

Menu Item: Select Tribe

-----

With this menu item you select the Lemmings Tribe you want to create a level for. As soon as you have chosen a Tribe, an empty world file will be created, the old world gets erased. Normally, each world file contains 10 levels, except the Practice 'Tribe', which actually contains of four levels with of different Tribes (i.e Space, Medieval, Egyptian and Polar by default). To change the style of the practice levels, see the

L2ED-FAQ

A lot of menu items are disabled until you select a Tribe.

These are the 12 tribes:

in 32/72

# 1.31 Classic Tribe

Main Legal Intro Menu Keys in 33 / 72

Windows FAQ History Register

-----

#### Classic Tribe

\_\_\_\_\_

This is the Tribe found in the original Lemmings 1 game. Normally, this Tribe has only a few fixed Lemming types.

These are: Climber, Floater, Exploder, Blocker, Builder, Basher, Miner and Digger, which will be set automatically, when you create a new level or world. But you can change this if you prefer to have other Lemmings.

#### Special Notes:

Do not try to use an Attractor Lemming in a Classic World. The effect is quite harmless but very funny. Test it, but don't use it in final levels.

This is the only Tribe where you can use the Blocker Lemming.

#### Lethal Traps:

- 10 Tons: Squashes one Lemming underneath...- Stone : Squashes one Lemming underneath...

- Flamer : Burns every Lemming going to deep into the flames...

## Special Objects:

\_

Water

Solid Blocks

## 1.32 Beach Tribe

Main

Legal

Intro

Menu

Keys

Windows

FAQ

History

Register

Beach Tribe

Just a normal tribe most of the others.

Special Notes:

in 34 / 72

```
If you add a sun, don't forget the animating Sun Eyes object. Try to keep clouds and the sun
transparent

.

Lethal Traps:

- Evac. Chamber: Sucks one Lemming inside, then evacuates the chamber...
- Clamp
: Eats one Lemming.

Special Objects:

- Water
- Solid Blocks
- Solid Blocks
```

# 1.33 Cavelem Tribe

\_

Trampoline

# 1.35 Egyptian Tribe

Main Legal Intro Menu Keys Windows FAQ History in 36 / 72

#### Register

\_\_\_\_\_

#### Egyptian Tribe

\_\_\_\_\_\_

I specially enjoy this tribe, especially because of the Sand Container and Toggle, which are never used in the original levels.

#### Special Notes:

The Sand Container needs some special care: There's a bug in Lemmings that will cause the game to crash under right conditions: If the sand reaches the opening hole of the Sand Container, the game freezes. To avoid this bug, always make sure that the sand can run off the level somewhere, or limit the time so that it can't reach this height. Have a look at the provided levels to get the grip of it.

Moreover, the Lemh Eyes side Object cannot be used due to aligning problems.

#### Lethal Traps:

- Lem Crusher: Kills one Lemming at a time.

## 1.38 Outdoor Tribe

Main

Legal

Intro

Menu

Keys

Windows

FAQ

History

Register

Outdoor Tribe

\_\_\_\_\_

This Tribe has a lot of background graphics. Unfortunately, there are no Sand Container and Toggle Objects as could be expected by the Raw Blocks.

Special Notes:

The Plant Catapult is out of order as the action height is 8 pixels above the lower bottom of the Object and so normally, the Lemmings don't reach it. The only way to get it to work is to let lemmings fall onto it from above, which is not that easy at all.

Lethal Traps:

- Frog: Eats one Lemming at a time.

Special Objects:

\_

Water

(two different anims)

\_

Solid Blocks

\_

# 1.55 Menu Item: Set Level Size

Main
Legal
Intro
Menu
Keys
Windows
FAQ
History
Register

Menu Item: Set Level Size

-----

Lemmings 2 allows 7 different level formats, i.e level sizes, ranging from 1280\*160 to 320\*640. You cannot create bigger levels than these sizes, but you can create smaller ones by dragging the visible size of the level to your personal favorites.

If you have already begun to paint your level and then change it's dimensions, the right or lower border areas will be cut off by this operation, so it would be wise to

Move the Level

to it's top left

corner before changing the level size, so the loss is minimized.

in 49/72

## 1.56 Menu Item: Level Prefs...

Main

Menu Sub-Item: Screen Mode...

-----

Let's you choose your prefered screen mode for working with the Editor. Note, that you should NOT redirect the screen using external mode promoting programs like NewMode or ModePro, as these programs are usually only made for opening screens that keep their size. The Editor however, will use a lot of different screen sizes, depending on the level size and the screen font. If you want to use a graphic card screen, use this screen mode requester and not NewMode!

Please note the following:

#### 1) ECS Machines

Due to their 16-bit architecture, OCS/ECS machines will CRAWL in Hires

in 59 / 72

modes, especially, if you don't have any fast memory.

#### 2) AGA Machines

If you've got a flicker fixer card, I would recommend to the Super72: SuperHires-Interlace mode, with is quite suitable for most resolutions. Otherwise it's best to go for the screenmode you're using for your workbench to avoid monitor switching during the closing of the Editor's screen.

#### 3) Graphic boards

The Editor needs lots of different screen sizes from 1280 width to about 650 pixels height. Choose a suitable screen mode to support all those resolutions. I emerged some problems with Cybergraphics Software V40.65 in conjunction with Autoscrolling and horizontal screen dragging. If you also have these problems, you'd better switch to an AGA screen mode, if possible.

# 1.75 Menu Sub-Item: Min. Menu Height

Main Legal Intro Menu Keys Windows FAQ History

Register

Menu Sub-Item: Min. Menu Height

If this item is checked, the editor opens his screen with at least the height to display the menu in one single row. Normally, this will only have effect on level sizes of 1280x160 and 1024x192. This option has a slight drawback: Due to the bigger size of the screen it consumes more chip

memory.

If you disable this feature, the screen will be opened at the height of the level plus the screen bar, so there no gap to the end of the screen.

## 1.80 Menu Sub-Item: Trace Mouse

Main Legal Intro Menu Keys Windows FAQ History Register

Menu Sub-Item: Trace Mouse

\_\_\_\_\_

If this option is enabled, the Objects, Raw Blocks and Block Elements windows will open at the current mouse position. This feature can only be sensibly used when working on a lowres display mode, with just little view of the whole level. Otherwise you're adviced not to use this option, because it's very irritating.

If you think you want this feature on, you better turn off the automatic window opening for the three windows, and open them with the hotkeys, when you need them.

The behaviour of Trace Mouse might change in futher versions of the Editor.

Menu Item: Interpolate Gfx

As you have probably read before, the graphics in the Block Elements window

in 68 / 72

are halved both vertical and horizontal to save space on the screen. This shrinking process leads to a unavoidable loss of detail, making it sometimes hard to figure out what it is exactly.

Enabling this feature will interpolate each pixel, normally yielding better graphics. This, however, will take some time to perform. Decide yourself, which graphics suits you most.
