

Installation

Dialog View 2.0 incorporated the function of two older extensions of mine, Dialog View 1.x and Open-wide.

To install Dialog View:

1. Move or copy Dialog View to the Control Panels folder inside the System Folder.
2. Remove any older copies of Dialog View or Open-wide. If you are upgrading from Dialog View 1.x, you may as well remove the Dialog View Settings file from the Preferences folder. (Dialog View 2.0 will create a Dialog View Preferences file.)
3. If Norton Directory Assistance is present (probably in the Extensions folder), remove it. Dialog View will not run in the presence of Directory Assistance.
4. If you like, you may open the Dialog View control panel and click the Help button to read online documentation, or play with the settings. However, Dialog View will not actually function until you...
5. Restart your Mac.

Dialog View will give weekly reminders until you register it.
