

Credits

Colleen Dick has been “pushing the envelope” of Hypercard ever since its inception in 1987. She has built up an eclectic collection of educational and entertainment software, and is a pioneer in bilingual educational software. Many of Platypus’ offerings are available in English and Spanish. Colleen learned from the school of hard knocks what makes a program appealing to users. She holds a human interface patent in Europe, and patent pending in the U.S.A.

AddColor by Apple has a lot to do with the enhanced look of this stack, and WindowScript™ by Heizer Software, is responsible for the nifty control panel, and sharp new credits window. The Platypus movie was originally developed in AddMotion, then exported to QuickTime.
