What file does ScrapIt Pro open upon starting?

If you didn't double-click any files to start Scraplt Pro and there were no files open when you last quit Scraplt Pro a default file will open if it can find one.

If you've checked the proper option in the Application Preferences, the last files you had open will be reopened. If no files are opened, Scraplt Pro will look for a file named "Scraplt Pro File", "Scraplt][File" or "Scrapbook File" in the Scraplt Folder and the System Folder.
