What went wrong last time
propassword@assign.u-net.com (ProPassWord issues ie Bug's,Idea's ←
etc)

amiga_dude@assign.u-net.com (E-Mail Andrew Guard about anything else but ←
   ProPassWord)

1.2   What Is ProPassWord

                      ProPassWord is Password protection for your HD it will ask for a ←
                         user name
and password on start-up like most password programes but it dose not stop
there, the version you are using is a beta test with a lot of the features
enabled but due to the rush of getting this out in time for the last
CU Amiga a few of the features are missing. In future releases we will be
using a clever trick which will mean it will boot on start-up of your
workbench but it will not be in your wbstartup, startup-sequence
or user-startup so no one will be able to disable it in the usual ways.
ProPassWord will do this and a lot more see
                    future updates
                     for more
information.

1.3   Updates

ProPassWord Display Palette
Couldn't get it working in time for deadline for Submissions to the mag.
Which is a shame as I wanted to get working so much.

Graphics Cards surport
I don't have GFX card yet still waiting for BVision to arrive.

Non-use Topaz (Yuk)
I hate that font as much as you do.

Font senstitve GUI
Now we are talking.

You can get updates of ProPassWord from the Aminet or my web page.

   Send Voyager

   Send AWEB

1.4   Installing

                      When you unarchive you should have a ProPassWord Draw with

1)
                       ProPassWord

```
                    Main Program
2)
                 GenrateProPassWord
               For genarating the passwords
3)    Guide               You are reading it
```

Just copy The whole ProPassWord draw to your HD then edit your user-startup
(Please rember this is only a beta test version and that in
                  future updates
                  adding the programe to your user-startup, startup-sequence and ↩
                     wbstartup
will not be requied.)

E.G If I installed ProPassWord to HD1:utils/ProPassWord/ I would add to my
user-startup
Run <>NIL: hd1:utils/ProPassWord/ProPassWord

1.5 Error Codes

Here are the error Code you may come across

```
Error Code 1    Can not locate Password file
Error Code 2    The program is already resident in memory
Error Code 3    Program Has Been Hacked (This should never happen)
Error Code 4    System is low on Chip/Graphics memory.
Error Code 5    That palette is out of range.
Error Code 6    Can not save Log-file
Error Code 7    Can not save User-name
Error Code 8    Can not save Host-name
Error Code 10   Unknown data in password file
Error Code 11   Error in structure of password file.
Error Code 12   Error in ProPassWord config file.
Error Code 13   a non-valid config file for this version of ProPassWord
Error Code 14   a non-valid log file for this version of ProPassWord
```

1.6 What you need to us this program

            You nead an AGA Amiga, Kickstart 3.0 (39)+ which can display PAL ↩
                 screen
and at least 450K of Chip/Graphics.

We recommend fast memory as well with a good CPU.

This program has not been tested on 68060 or PPC Amiga system.

            How do I use this program?

1.7   How do I use this program?

First of all configuration for ProPassWord is done with in
GenrateProPassWord. ProPassWord will edit all the functions and
add/edit/delete users password data from in there.

GenrateProPassWord makes two diffrent data files:-

Config_ProPassWord   Is the main config data file.
PassWord_PPW   Is the password data file.

Config_ProPassWord is saved in S:
All other data is save in ETC: unless you configer it not to.

GenrateProPassword

ProPassword

1.8   ProPassWord

Believe it or not ProPassword dose have a few option you can issue
during loading you can see the commands available by typing
ProPassword ?

1) Force
If the Program dose not run on your machine try this command this
fix some problems some people may have

2) Info
This just displays some technical info

3) Noaudio
This command disables all audio actions which could cause problems
with some users

The GUI is self exploratory just one important note if you type
your name or password in without entering it will flash and reset
the GUI (This not a bug it is a feature) This is explained more in

GenateProPassword Config Menu

1.9   GenrateProPassWord

Main Menu

Master Menu

Master Status

```
                    Delete Menu

                    Config Menu
```

1.10   Main menu

```
                1) Load in a PassWord list
Load in ProPassWord data file.

2) Save a PassWord list
Saves a ProPassWord data file.

3) Config PassWord (NEW)
Where you config ProPassWord and enter your own password and
master password.  As well you control master issues about password
data.

                This opens Master options menu
                4) Display users information
Display all users on the password data base.

5) Add a new user
Add's new user.  Each user has UserName , PassWord and ID Word.
It is recommend as good practice that the enter's for each user
doesn't use the same data for each fields.

6) Edit user
Edit user settings for UserName , PassWord and ID Word.  Must
activate Master ID before using this function.

7) Delete user
this dose not delete the user from the data base it just tags them for
deletion.  When a user has been tagged they can not get in to the system
unless they are untagged which is done through the
                master status menu
                0) Exit program
Exit's the program.  It will not warren you that you have saved
PassWord or Config data.
```

1.11   Master Menu

```
                1) Enter master password
When you First use this the username is username and the password
is password

                This opens Master Status Menu
                2) Enter own password ((NOT PROGRAMMED))
For future realise

0) Back to main menu
```

Take you back to main menu

1.12   Master Status Menu

                  1) Disable master password
You only need to put the master password in once if you exit out
of the master status menu and realise you have to go back in it
will not ask you for the master password. This option is in case
you have to leave the system to go to the toilet you don't want
your annoying brother to have access to the master status options
so use this option to rest it so it ask for the master password

2) Enter own password ((NOT PROGRAMMED)
for future release

3) Config ProPassWord
This is the option you would use if you would like to change the
way ProPassword works

                  This will open the Config Menu
                  4) Edit master password
This allows you to change the master username and the master
password

5) Delete user account
If you would like to delete tagged users or untag them this is the
option you would use

                  This opens Delete Menu
                  6) Change auto-expire time
Change the expire time of the users

7) Validate user
If a user has expired you can re validate the user for more time

0) Back to main menu
Take you back to main menu

1.13   Delete Menu

1) Display all users who are designed for deletion
Displays all users who are tagged for deletion

2) Delete ALL users who are designed for deletion
Deletes all users who have been tagged for deletion

3) Select a user to be un-designed for deletion
Allows You to untagg a user so it will not be deleted

4) Select a user to be deleted

Allows you to select a user for deletion

0) Back to main menu
Take You Back to main menu

1.14   Configuration Menu

1) Load ProPassWord config file
Load The proPassword config file

2) Save ProPassWord config file
Save The ProPassword config file

3) Delete ProPassWord config file
Delete ProPassWord Config File

4) Where ProPassWord data base is (ETC:PassWD.PPW)
Where you would like the PASSWD.PPW File to save (Password File)

5) Where ProPassWord access log is (ETC:Finger.log)
Where You would like the to save the Finger.log this file is so
you cane see who has been on your computer

6) Where ProPassWord saves user name (ENV:UserName)
Where ProPassword Saves User Name this file holds the name of the
user on your system so for future relise if a user was loging in
from the a bbs or some where you would know who it is at a glance

7) Name of ProPassWord host name (localhost)
This is for the host name defaults to localhost. This option
again is for the future for bbs/internet.

8) Where ProPassWord host name saves (ENV:HostName)
where the host name saves

9) Screen blanker delay in seconds (180)
The delay in seconds that the GUI will stay on screen without you
doing anything after this time it will blank it's self.

A) ProPassWord Palette
This is no functional but in the future it will change the palette
of the ProPassword GUI

B) Key clear delay in seconds (60)
This is The key clear delay which is how long it will take if you
type something in to the GUI like your name then go out to make a
cup of tea when you come back it would of reset so you have to
type your name in again, it basically resets the GUI.

0) Back to main menu
Take You Back to main Menu

1.15 Amiga Securty Mailing list.

List for issues of Amiga Security ie PGP Amiga, ProPassWord, Intranet/
Internet Firewalls or FOF issues. Anything and everything to to do
with Amiga security issues.

1.16 By Amiga programmers, for Amiga programmers!

http://www.assign.u-net.com/amivisual/
AmiVisual is a programming tool (written by Amiga programmers) which
will allow Amiga programmers to create programmes by a GUI system.

AmiVisual is not just a GUI programming system, it's a whole new way of
writing programmes on the Amiga.
The best way to look at it is Bars+Pipes meets NewIcon's.

The closest we have on the Amiga is CanDO. Unlike CanDO it is a generic
module system. In other words, you the programmer, can specify the code
that it generates e.g. C, E, AMOS or Blitz.
No other O/S will have a system this advanced, but so simple.
This is the future of programming and I hope you will join me on the way
to develop AmiVisual.

Mailing list formed

Yes great news ! We now have a mailing list up and going

Goto http://www.coollist.com/menu.htm and at bottom of the page you will
see "Subscribe to a Coollist mailing list:" in the list name
enter amivisual (this is case sensitive, make sure you enter it in all
lower case) and in the e-mail box, the address you wish e-mails to be
sent to. Note as well, you must use this address when you post a mail to it!
To post a post message to the group just mailto:amivisual@coollist.com

German AmiVisual Issuse's
IRC
A German language channel has been formed on Dal-net
#AmiVisual-DE
I am looking for German speakers/writers to be OP's on the channel. If
you think that you fit the bill and have a registered nick on Dal-net,
then get in touch with me. Please state that you want to be an OP on
#AmiVisual-DE..
mailto:amivisualde@assign.u-net.com

Note:-I don't speak German at all, so please write in english. Thank you.

If you want to contact me about any issues about amivisual personally and
it isn't about German support mailto:amivisual@assign.u-net.com

1.17 IRC-Gamer

IRG-Gamer

Is a system which people who have access to IRC networks can play PRG games
over the net using IRC channels. The games are for multipliable people.
For more information go to this web page
http://www.assign.u-net.com/irggamer/

the use of ProPassWord.
E&EO

1.19 Why was this realise rushed

Due to fact CU-Amiga the best Mag around and Mag I Subed to is Closing down
:(((

To all the CU-Amiga reads thanks for staying with Amiga. Keep the faith!

To those's who worked on CU-Amiga good luck hope we see you again soon!

1.20 What went wrong with the last Aminet version of ProPassWord

The author (Andrew Guard) of ProPassWord compiled the wrong version of
ProPassWord for the Aminet.
By mistake the version made for the Aminet was for offical beta testers
only. Genral public usage was never ment to happen on the last version of
ProPassWord (0.16b).

The last version of ProPassWord would have auto-expired way before it
should have.

I am very sorry for any problem that this has cause you.

Andrew Guard (21/11/1998)
