History

You must install the english catalog to use the program with the english gui. The "master-Catalog" is in the catalog-drawer (more -> Catalogs.guide).

Please overlook my mistakes in the guide,
my english is very bad.

1.2 Copyright/Autor

MEReset is Freeware.
All rights reserved.

You use MEReset on YOUR OWN RISK!. If damage or destroy the Prg.
something is that your Problem not mine.

MEReset (C)opyright by Malte Eller,1995-1999

1.3 Requirements

MEReset need OS2.0 or higher (min. OS3.0 to use Locale) and a AMIGA and nothing more.

MEReset is only testet on a AMIGA 500 (OS3.0, 3 MB RAM, 520 MB AT-HD).

1.4 What do MEReset??

MEReset is a small Commodity, which can reset your Computer (system confom!).

MEReset have an small ARexx-Port (Name MERESET.REXX):

- Ende
This cmd cancel the Program.
- Reset:
This cmd reset your Computer, with the prg. parameters.
- QReset:
resetet the Computer immediately (CAUTION!DANGER!).
- Abbruch
Cancel the Countdown.

1.5 Using

I think it is very easy...

Tooltypes:

SICHER - befor an Reset an Sure-Requester will popup.

ZEIT - the time for the Countdown.

and the normal

CX_HOTKEY,CY_POPUP,CX_PRIORITY

You can change this parameter also in the Prefswindow (Project->Prefs)

The CLI/Shell-Version has only the Parameter ZEIT=, (for the Countdown) but the Countdown will not shown. (This comes in the next version).

1.6 Installation

You must only use the Install-Script to install the Program.

1.7 History

Version 1.0:

The first Version of this meaningful Program.

Version 1.1:

Small correction and a Sure-Requester build in.

Version 1.2:

A ARexx-Port and the Count-Down build in.

Version 1.3:

The Reset-Count-Down can now be canceled, the ARexx-Port Name is now >> MERESSET.REXX <<.

Version 2.0:

The Program now uses the Locale-Library.

Version 2.0a: (12.01.1997)

Installer-Script, English Guide, Catalogs are now ready.

Version 2.1: (10.02.1997)

Mistakes in the Locale-using are now removed, a new CLI/Shell only version is now in the archive.

Version 3.0: (24.11.1998)

Complete rewrite!

Version 3.1: (09.01.1999)

- Bug in ARexx-Port removed
 - The program was optimized
 - The Menues now layouted in the NewLook look
 - The Prefs-Gadgets >Cancel< works now correct.
-
