Trouble Shooting Guide

Since this game uses continuous sound effects in the background
you'll need more than 4 megs of ram in your system. If you got 8 megs or more you're ok! But if you got only
4 megs then there is hope!

You'll need to create a new swap file in the size of 11264kb temp or
perm. This will give full sound effects. For sound features, you can use
either a Sound Card, or PC Speaker. But for the best sound effects the
use of a Sound Card would be more recommended!

Follow the instructions in your Windows Manual about changing your
Perm or Swap file size or go into your CONTROL PANEL and double
click on HELP.

Thanks again for trying out Baby Brats - Super Play Room for Windows and don't forget to registered for
your full blown version.
