1.2 Introduction...

```
Introduction...
---------------
    Have a look at the next button and if it's a little un-readable then
    Fixguide is for you!!

    ~What's~wrong~with~this~button~?
```

```
as you can see the button is un-readable, I have had alot of guides that
have this problem. So I decided to write an editor that replaces all
the ~ with a space.

How's this?

 What's wrong with this button ?

There you go much better don't you think?
```

1.3 disclaimer

```
            Disclaimer
----------

This program and all its associated files are Shareware. They may be
freely distibuted and used as long as the following conditions are
met:

    1). The
            Archive Contents
            remain intact.
    2). The only fee charged is that of handling and carriage costs.
    3). All executable files are NOT altered, disassembled, tampered
        with or used for anything illegal.
    4). If used regularly then a donation would be appreciated!!

I will not be held responsible for any damage this program may cause to
your machine and/or your Amigaguides, or any other files.

I have thoroughly tested it and there should be no problems.

The contents of this archive are the Copyright (c)1997 Mark Green.

This program has been tested on:

A1200     2MB chip   540MB Hard-Drive
A1200     2MB chip   4MB fast   540 Hard-Drive  28mhz 020
A600      1MB chip

All tested with Kick v3.0 and Kick v2.0

They work perfectly well on all of the above configs. If you have a
different Amiga and either program doesn't work please let me know.
```

1.4 Do I need a Super Amiga?

```
Fix Guide requires:
-------------------
```

These Editors require the following:

```
An Amiga (A bit obvious Really)
Kickstart v2.04+
1MB of Chip Memory
ASL.Library in Libs:
Some dodgy Amigaguide files
```

1.5 Contents of the Archive

```
Archive Contents:
-----------------
```

   The data held in this archive is shareware, you may freely distribute
   it as-long as the following files are in the archive AND are not
   altered:

```
    FixGuide             ; The main program.
    FixGuide .info       ; Icon for main prog (Can be changed).
    FixGuide.Guide       ; Amigaguide Docs
    FixGuide.Guide.info  ; Icon for Amigaguide docs (Can be changed)
```

   Please keep all the above with the archive.

1.6 So.....How do I use it then?

```
How do I use it?
----------------
```

   Dead simple... Double click on the icon and a window will open. A file
   requester will open next. Select your AmigaGuide file and select OK.

   The File will be loaded and examined. Any problems will be altered. the
   program will then bring up another requester. Select the name of the
   file to save as, and oooh aaah!!! all done.. Your Amigaguide should now
   be viewable.

1.7 What's Shareware then Bob?

```
            The Shareware Concept:
----------------------
```

   Shareware is a concept where you may try a program before registering
   (Paying). This program is shareware but unlike other shareware programs
   it isn't limited in any way. All I ask is if you use it regularly and
   get some enjoyment out of it you to send me something (Anything from
   a postcard to cash, I don't really mind).

The more people who send me a donation will give me an inclination of
the size of the Amiga community, I will then decide whether it's worth
writing more programs.

To register
            Press
            for my address

1.8   What do we do then?

Magazines.

    If any other Mags (CU or AF) would like to include this on a CD then
    please do-so, I really don't mind. All I ask is that the archive isn't
    altered.

1.9   Arhhhhh no not them....!

                Known Bugs

    I have not found any yet 8-D

    If you find any send me a detailed description of the bug and
    send it to me at
                My Address

1.10   What has been changed and added..

Fixguide Version History

(17/10/97)
   V1.0 Released

    Initial Release

16/10/96
   V0.0 interim version

    Could only change the name of a certain file on my hard drive. It would
    then save over the original file

1.11   What's on the horizon now?

```
The Future.
-----------
```

    I am currently working on a couple of new projects they should be
    finished shortly, they are:

    SwosEditor v2.0   -   New version featuring a newer better interface
                           that uses Listviews and Cycle gadgets. It will
                           also have all the things I couldn't fit or be
                           bothered to include in the current versions.
                           (About 15% Complete).

    Overflow   -   An AGA clone of Pipemania. Will boast loads of
                           features, including:

                       *   256 Colour Hires Laced Graphics
                       *   A scrolling play area upto 2000,2000 pixels
                       *   Sampled speech & SFX
                       *   Loads of different Musics
                       *   New features - never before seen in this game
                           genre.
                       *   upto 4 players (Using 4 Plr adaptor)
                       *   Loads more besides

                           Overflow is currently in its initial design stage.

1.12   Who do we blame for this program?

```
Credits.
--------
```

    The idea, conception, and programming is courtesy of: Mark Green.

    And to all the Amiga owners who have helped keep the machine alive. If
    it wasn't for people like you the Amiga would be dead. Stick with the
    Amiga and if a Software House stops supporting the Amiga then write to
    them. If they still say NO then it's their loss.

1.13   You wanna contact me then?

```
About the author

Mark Green is 22 yrs old (just) and I have been interested in the Amiga
since my first A500 in 1991.

At first I only played games, but now I am interested in:-

Programming (Blitz, Amos, Learning C)
3D - I use Imagine 4 (thanx CU) and Cinema 4D 2 (Thanx AF)
GFX - I use Dpaint 5 and PPaint 6.4
```

File Man - Dir Opus 4 & 5
Games esp. SWOS , Xtreme Racing, AB3D 2-TKG, TFX (cheers CU)

Recently mr girlfriend has moved in with me and she is now pregnant with
our first baby :-))

After getting burgled and losing my system :
A1200 - 6meg 020/28+fpu , 540hd, 2spd CD-ROM , Squirrel Scsi, Enact v42 bis
modem.

I have finally started getting it back together I now use:
A1200 - 6meg 020/28+fpu, 540HD, 8spd Atapi CDROM (connected via IDE
interface) ,Hewlett Packard 690C+ Deskjet Printer, Video Backup and numerous
mice, CD32 pads, Joysticks etc..

I hope to be getting a Blizzard 030/50mhz soon and a 1438 multisync
monitor.

Okee Dokee. I hope you use and enjoy this program as much as I enjoyed
programming it.

Contact me concerning any of the following:

    Bugs   (There has to be some)
    Improvements or possible additions
    Information on new programs
    or anything else.

write to:

1.14 Other programs by Mark Green

I have also written the following

 Text Reverser : A totaly useless program that reverses text input into it
                  One of my first programs

 Wiev   : An IFF pic viewer (Un-released -- Crap Really)

 Swoseditor #.# : Editor for Sensible World of Soccer save game files.
                  There are loads of versions floating around. Latest
                  version is V1.4 - (17/09/1997)
