

VARY COLOR

If you have a color monitor, you may want to change the colors on your display. Select VARY COLOR on the Main Menu to change screen colors. Each time you select FOREGROUND or BACKGROUND on this menu, you see the revised screen colors. When the colors you desire are on the screen, exit this menu (Quit) and the colors will be retained.

STATES & AREA CODES

Select STATES/AREA CODES on the Main Menu to see a display of the Post Office two-letter state abbreviations. This is handy if you forget whether NE stands for Nevada or Nebraska, etc. There is also a telephone "reverse" area code directory -- if you know the area code, the directory shows you which state has that area code. This can be useful when you get phone messages with an unfamiliar area code, and wonder about the location and/or time zone of the caller.
