There was a book that recently came out, teaching you all sorts of things in Blitz- it wasn't a full manual re-write though.

## 1.5 Re: Writing A Proper Blitz Manual

From: Curt Esser <camge@ix.netcom.com>

Date: Tue, 03 Feb 1998 18:32:17 -0600

Subject: Re: Writing A Proper Blitz Manual

Hi,

Yes, I agree that a new Blitz manual would be the single greatest improvement that could be made. I would gladly buy a decent manual with better descriptions and examples of how to use the commands. And including the new commands!

I had Blitz 1.7, and when I got 2.1 I discovered that the manual is really no different than my old 1.7 manual. It is now in a better format (the 1.7 manual was in a softcover book, and the pages immediately began to fall out!) but there is no description of any of the new "3rd party lib" commands, and in fact it is MISSING some stuff that the old manual had. For example, the Appendix 1 mentioned on page 43 really does exist in the old manual, with descriptions of all the Blitz Object structure. Very useful.

On 03-Feb-98, Mike Carter wrote:

>I always find I can learn or understand things better when they're in  
>a book. You can take the book to bed then and read it to sleep, or  
>sit on the bog having a crap and going over the interrupts.

Yes :) and it's also more convenient to have my code on the screen in front of me, and be able to look at the book at the same time, rather than to keep flipping screens whenever I want to look something up. Or try to remember which 3rd party doc the information is in.

>

> Interested in sharing the work?

>

The current Blitz manual has that already, we would just go into a  
little bit more detail about each function (were needed) and take  
some of the technical bullshit out; or add an english equivalent next  
to it.

What format would the book have to be created in? Amigaguide is all  
very well for transmitting but I like a paper one! Do you think it  
would ever be possible to get a book published about Blitz Basic?

Sigma press take book contributions from new writers :-)

If other companies can make money out of selling re-writes of manuals  
for crappy PeeCee applications then I'm sure it could sell,  
at least a few copies anyway !!

Cheerio,

Mike.

Yes, use "Wline ..... " with -1 as the colour. Then the second time, this line will be erased.

## 1.12 Where's the Font I am looking for?

From: Roger Beausoleil <vision\_fx@citenet.net>

Date: Mon, 16 Feb 1998 02:47:50 +0500

Subject: Where's the Font I am looking for?

Hi All...

I am trying to code with Blitz an Open Screen with a Specific FONT in the Title bar... Its very easy with the Basic Command Screen... but it sounds hard with the OS functions. Please ne1 take a look at the code and tell me what's wrong...

Here's the code: ( I use the Amigalibs.res )

-----  
 WBStartup

DEFTYPE.Screen \*Scr

DEFTYPE.NewScreen MyScreen

DEFTYPE.TextAttr Workbench12

USEPATH Workbench12

\ta\_Name = "Workbench.font"

\ta\_YStyle = 12

\ta\_Style = 0

\ta\_Flags = 0

USEPATH MyScreen

\LeftEdge = 0

```
\TopEdge = 0
\Width = 640
\Height = 400
\Depth = 3
\DetailPen = 0
\BlockPen = 1
\ViewModes = -28668
\_Type = 15
\DefaultTitle = "Nice Font Title!"
\Gadgets = 0
\CustomBitMap = 0
Scr.l = OpenScreen_( &MyScreen )
If Scr
MouseWait
CloseScreen_( Scr )
endif
end
```

-----  
P.S.

I did the test with the Taglist too... The problem still the same. The Title bar still be write in Topaz font.

Thx a lot.

Roger Beausoleil

Quebec - Canada

( Please, Excuse me for my english, I did my best... I am french. )

## 1.13 Web Space

## 1.14 Warning : Val command bug

From: Marc Le Douarain <mavati@club-internet.fr>

Date: Sun, 08 Feb 1998 21:41:35 +0100

Subject: Warning : Val command bug

Hello Blitzers !!!

When I was making the last version of Marryampic (a memory card-game available on Aminet in game/think). I've got a big trouble with the command Val()

I was converting an hexa number in a string, and was using : Val("\$"+STR\$)

That's work if your number is less long than 8 digits. With the all 8 digits (as a 32 bits can contain),

the val function doesn't work.

Be carefull !

Here is a little example, and the function I've used to avoid that trouble...

(There must be a better one...)

```
Function.l ValHexa8Digits{CHAINES}
```

```
LGT=Len(CHAINES$)
```

```
NBR.l=0
```

```
I=1
```

```
Repeat
```

```
CAR.b=Asc(Mid$(CHAINES$,I,1))
```

```
If CAR.b>$40
```

```
CAR.b=CAR.b-65+10
```

```
Else
```

```
CAR.b=CAR.b AND $f
```

```
End If
```

```
NBR.l=NBR.l+CAR.b
```

```
If I<LGT
```

```
NBR.l=NBR.l*16
```

```
End If
```

```
I+1
```

```
Until I>LGT
```

```
Function Return NBR.l
```

```
End Function
```

```
CH$="4012C003"
```

```
NBR.l=Val("$"+CH$)
```

```
NPrint NBR.l
```

```
NPrint "$"+CH$
```

```
NPrint ""
```

---

```

NPrint ""
NPrint "Val gives : "+Hex$(NBR.I)
NPrint ""
CALCUL.I=ValHexa8Digits{CH$}
NPrint CALCUL.I
NPrint Hex$(CALCUL.I)
Bye !

There's all this talk about the show over the other side of the world
but what about the World Of Amiga being held in London? Has anybody
considered getting a table their? Might even be able to wangle
something with CU seeing as they're organising it along with EPIC.
Comments?
Cheerio,
Mike.

>2. What about show in Saint Louis? Any news from Blitzers?

Well, I'm still waiting to see if my company is sending me away on a work assignment during that weekend. That would *\*really stink\** as St. Louis is only 400 miles from where I live but 800 miles from where they want to send me.

Is anybody else still considering getting a table there?

## 1.17 Various

Date: Fri, 20 Feb 1998 11:28:43 +0100 (MET)

From: Mathias Parnaudeau <mathias@pegase.univ-angers.fr>

Subject: Various

Hello everybody,

I have no particular problems (yes, it happens) but some things to say:

1. I forgot the name of a member who gave docs in PageStream format, about Blitz libraries. I'm interested. So, guy, could you send me this doc.

Thanks.

2. What about show in Saint Louis? Any news from Blitzers?

3. About IFF compression, I know the method used is RLE, an easy to understand method (if there wasn't so many variants!). So, Xavier, see you next week in Angers...

4. The list is really quiet, isn't it?

The show must go on.

Bye,

Mathias

Hey Bob!

We aren't morons nor less smart than you here!

I got that too that is NOT my problem!

MY problem is when I reply to a simmilar e-mail (to confirm that I REALLY wanna unsubscribe) I get a reply saying that my e-mail(meaning ME) is not a subscriber/member on that List!

AND I SURE am getting e-mails from there - meaning that I am a member of that list!

thanx for your try to help thou!

## 1.20 UNSUBSCRIPTION INFO - READ HERE

Date: Wed, 11 Feb 1998 13:39:38 +0100

From: Bob <stifter@mira.cz>

Subject: UNSUBSCRIPTION INFO - READ HERE

<<I have succesfully unsubbed and resubbed, so read what I got from the server >>

Subject: ezmlm response

Date: 7 Dec 1997 21:54:37 -0000

From: blitz-list-help@netsoc.ucd.ie

To: stifter@pha.pvtnet.cz

Hi! This is the ezmlm program. I'm managing the  
blitz-list@netsoc.ucd.ie mailing list.

To confirm that you would like

stifter@pha.pvtnet.cz

removed from this mailing list, please send an empty reply to this address:

blitz-list-uc.881531677.igkpnfhdcchpkcmddae-stifter=pha.pvtnet.cz@netsoc.ucd.ie

Your mailer should have a Reply feature that uses this address automatically.

I haven't checked whether your address is currently on the mailing list.

To see what address you used to subscribe, look at the messages you are receiving from the mailing list. Each message has your address hidden inside its return path; for example, God@heaven.af.mil receives messages with return path ...-God=heaven.af.mil.

--- Here are the ezmlm command addresses.

I can handle administrative requests automatically.

Just send an empty note to any of these addresses:

<blitz-list-subscribe@netsoc.ucd.ie>:

Receive future messages sent to the mailing list.

<blitz-list-unsubscribe@netsoc.ucd.ie>:

Stop receiving messages.

<blitz-list-get.12345@netsoc.ucd.ie>:

Retrieve a copy of message 12345 from the archive.

**DO NOT SEND ADMINISTRATIVE REQUESTS TO THE MAILING LIST!**

If you do, I won't see them, and subscribers will yell at you.

To specify God@heaven.af.mil as your subscription address, send mail

to <blitz-list-subscribe-God=heaven.af.mil@netsoc.ucd.ie>.

I'll send a confirmation message to that address; when you receive that message, simply reply to it to complete your subscription.

--- Below this line is a copy of the request I received.

I think there has to be a list containing all our e-mails(everyone's e-mail)

so the admin, go in there and delete the line with my e-mail on it!

simple, but who has that possibility?!

I though Liz Tucker(?) was admin.. I could be wrong..

Liz, if you see this, please remove me from that file!

I have thought Daire Byrne was the admin. I have searched for the old message, here it is.

Subject: The blitz-list is moving!

Resent-From: blitz-list@netsoc.ucd.ie

Date: Thu, 27 Feb 1997 20:38:40 +0000 (GMT)

From: Daire Byrne <daireb@netsoc.ucd.ie>

Okay the blitz-list is on the move! I have set up a blitz-list with everyone from the helsinki list subscribed to this one. The relevant addresses are now:

blitz-list@netsoc.ucd.ie ;the main list that msgs are sent to.

blitz-list-request@netsoc.ucd.ie ;the command address, ie subscribe etc

If you want help on the commands you can send, just mail

blitz-list-request@netsoc.ucd.ie and put the word "help" in the "Subject" field.... note not the body field as with majordomo. There might be a few small things that need to be configured so if there is anything you want me to set differently for the list just mail me.

The hope is I think that more people will start to use this new blitz-list and the cc.helsinki.fi one will become obsolete. Anywayz talk to yez later.

Daire

> Yep, unfortunately there isn't a "SelectAll" command either so you  
> have no way of selecting the text in order to paste it into the other  
> document.

Not quite sure what you're getting at, but it sounds like you want to transfer a block of code (perhaps a procedure or two) from one source-file to another...

If this is the case, the current editor already supports this:

Simply highlight the section of code to be transferred, Select Save Block (not sure of the exact command as I'm on my PC) and save this section to disk or RAM.

Now, load in your other source (the one where you wish to insert the block of code). Move the cursor to the point where you wish to insert the code-block and select Include. Choose the block you just saved and presto, you have now merged that block of code into this source.

If you want to transfer one whole source-file into another, simply load the second source-file, move to the insertion-point, hit the Include menu-option and select the source to be merged...

I tried this, and it still wouldn't work. And then I realized I had used windowfont on the wrong window! Once I fixed this, it works fine.

Thanks for the advice.

BTW, Textfit\_ returns the maximum characters of the window's font that will fit into the specified rectangle - most useful for word-wrapping.

## 1.42 Textfit\_

From: Curt Esser <camge@ix.netcom.com>

Date: Sun, 01 Mar 1998 17:44:01 -0600

Subject: Textfit\_

Hi All,

I am trying to use the command "Textfit\_" which is supposed to return the number of characters of the given text string that will fit in the current window, but I can't get it to work. I am using it like this:

NEWTYPE.textEX

txwidth.w

txheight.w

---

```
txMinx.w
txMiny.w
txMaxx.w
txMaxy.w
End NEWTYPE
t$="the string I want to print"
chars.w=len(t$)
fsize=(height of the current font)
txlim=(width in pixels of the window area I want to print to)
maxchars.w=TextFit_(RastPort(0),&t$,chars,al.textEX,0,1,txlim,fsize)
But I always get the same result, no matter what font I have loaded...
Can anybody see what I am doing wrong?
And yes, I have tried "Use Intuifont 0" and "windowfont 0" first.
Thanks for any help.
Bye for now...

### 1.43 Re: Textfit\_

From: Paul Burkey <burkey@bigfoot.com>

Date: Mon, 02 Mar 1998 01:32:37 +0100

Subject: Re: Textfit\_

Hi Curt,

```
> maxchars.w=TextFit_(RastPort(0),&t$,chars,al.textEX,0,1,txlim,fsize)
```

This is the first I've heard of TextFit\_() but my first idea

would be to supply your al.textEX as an address eg:

```
maxchars.w=TextFit_(RastPort(0),&t$,chars,&al.textEX,0,1,txlim,fsize)
```

~~~~~

The textExtent structure is where the result is to placed so  
it is natural to supply an address.

Cheers,

Paul

Have a look at my brother's Home Page (his name is Benoit)

<http://mach.ulb.ac.be/~bsocias>

and follow the KESACO and KESACO2 links,

or go to Aminet/text/edit/kesaco2.lha

Kesaco2 is a Japanese text editor,

but the source is in the archive

and it uses all the tricks you need

to make an ASCII/Latin-1 editor.

Good Luck.

## 1.47 stencil?

From: "C.J.R.Jarvis" <C.J.R.Jarvis@wkac.ac.uk>

Subject: stencil?

Date: Wed, 25 Feb 1998 13:36:19 -0000

Hello, blitzers

can anyone send me a piece of code which demonstrates the use of the stencil command? I really need it for some game ideas I have.

Furthermore, (and this is directed quite heavily at Paul Burkley :] ) in games such as Settlers, Theme Park and Foundation, how does one make the people walk behind the buildings? I really have no idea, and I am working on some ideas for a theme park style game, but I would really like to make the display isometric, and I just can't figure out how to create levels of depth.

Also, despite help, I cannot get the BitmapWindow command to work. It is a different command from BitmapToWindow, which is what a few people thought I meant. BitmapWindow is used to create a clipping area within a bitmap # (for cropping) but I just can't get it to do anything.

Chris

Hi C.J.R.Jarvis,

> Furthermore, (and this is directed quite heavily at Paul Burkley

> :] ) in games such as Settlers, Theme Park and Foundation, how does one

> make the people walk behind the buildings?

It's really quite simple but at the same time it's not very clever stuff. You simply have to draw all your objects in a strict order from furthest distance to the closest distance or to put it simpler from top to bottom.

With foundation I have everything setup in 'sectors' with each sector able to display 1 landscape object (tree, building etc.) and room for as many people to walk across that sector. I then render the sectors from top to bottom dealing with each sector of the landscape at a time.

> I really have no idea, and I

> am working on some ideas for a theme park style game, but I would really

> like to make the display isometric, and i just can figure out how to

> create levels of depth.

Just split your scene into sectors (or blocks) and be sure to render them in a strict order. You'll find it's quite a heavy system to render but it's not that hard to do. I'm sure people can think of faster methods but I honestly didn't find anything better for my particular needs.

> Also, despite help, i cannot get the BitmapWindow command to

> work. It is a different command from BitmapToWindow, which is what a few

> people thought I meant. BitmapWindow is used to create a blitting area

> within a bitmap #(for cropping) but i just can't get it to do anything.

Imagine you've got bitmap 1 that is 320x256 and you use the following code:

```
BitmapWindow 1,2,16,16,288,224
```

Now you have a 'fake' bitmap 2 which is your blitting area inside bitmap 1 a bit like this dodgy diagram.

```
+-----+
| +-----+ |
||||
||||
||||
||||
| +-----+ |
+-----+
```

You should blit to bitmap 2 using ClipBlit to get the best idea on how it works.

Cheers,

Paul

Subject: Re: stencil?

> Hello, blitzers

Hello

> can anyone send me a piece of code which demonstrates the use of  
> the stencil command? I really need it for some game ideas I have.

This should work, but I haven't checked it

bitmap 1,320,256,4 <= The background bitmap

buffer 0,16384

stencil 0,1

sblit shape,x,y

repeat

use bitmap 1

unbuffer 0

bblit 0,anothershape,new,newy

newx+joyx(1)

newy+joyy(1)

forever

You should, hopefully, be able to move the object about and see what happens when the co-ordinates cross.

This should help you out and hide object behind a shape. Email us if it doesn't work, cause I'll write a program when I get home.

> Furthermore, (and this is directed quite heavily at Paul Burkley

## 1.51 status of audio channels

Date: Mon, 02 Feb 1998 09:58:43 +0000

From: James Marshall <homegrown@eclipse.co.uk>

Subject: status of audio channels

Hi all,

does anyone have any neat tips on how to tell if a sample is being  
played through one of the audio channels? I've tried monitoring the  
various audio hardware registers given in the Blitz 2 manual, but none  
of them seem to change when a sample is played. I also looked at  
attaching code to the audio channel finished interrupts, but that tended  
to crash my machine. Help?

Also no-one responded to my query on problems with 16 colour hi-res  
coplists in the Display Library. Has anyone experienced anything similar

(displays come out too narrow)?

James

>tended to crash my machine. Help?

Hi! Months ago I was trying to know when a sample just ended playing  
in one of the channels, but there is no way. Even checking the finished  
interrupts, flags, etc. after playing a sample the channel continues  
as active, and next time the results are weird. Even a friend who codes  
emulators for Amiga tried, but without good results.

I don't know why you wish to get that info, but in my case

I needed it to avoid playing a soundfx in the channel while it was still  
playing another, in a game. I solved this problem coding a little piece  
of code and using a table of Priorities and Times for each sample, in this  
way each time I want to play a soundfx I call that subroutine, check its  
priority and # of vbi it will take, and if it's high than the currently  
playing then play it and set as current.

Well if your prog need NOT to do anything while waiting you can try this

one!

repeat

a.w=3Dpeek.w(\$dff01e)&%11110000000

until a>0

This will go off from the loop immediately when one of the audio channels=

have finished playing! In fact the sample starts at the begining. ;)

There is one thing thou you might have to do, because blitz is using audi=

o

interrupts by itself I think, so the interrupts have to be disabled

manually. (WARNIG this can lead in serious audio problems!!!)

to disable all audio interrupts you writepoke.w \$dff09a,\$0780

and to enable them you write poke.w \$dff09a,\$8780

If you got more problems or you don't get it working hit me with mail wit=

h

more details what you are trying to do.

Well, unbuffering replaces the background, so your bob is overwritten.

You either have to make sure they don't overlap, or unbuffer all your

BBlits each VBL.

Subject: Some questions

Date: Tue, 12 Feb 97 11:04:34 GMT

From: Robocop@dame.de (Frank Otto)

Bcc:

Hi,

I'm currently programming a new Amiga game and have some questions.

I hope someone can help me.

1) The command "BitmapInput" causes a guru, if I use it more than once.

Is there another command I can use to use Edit\$() from a Bitmap in Blitz mode?

2) How can I turn off the ColSplit-command? I made a rainbow background and want to turn the rainbow off (to fade the screen) but how can I do this? Just setting the splitted colors to the RGB value of the non-splitted colour does not work because this cannot be faded!

3) I have bobs in my game which are unbuffered and bblitted every vertical blank.

But if there is a bob (which does not get unbuffered) right to the other bob, not only the unbuffered bob disappears, also the bob next to it.

This strange event only appears if the bob is right to the other one.

What's the reason for this?

Ok, thanks!

Have you tried resetting to defaultinput before switching ?

BitMapInput

AMIGA

DefaultInPut

FileInput

DefaultInput

BLITZ

BitMapInput

If this still crashes, which is not unlikely since I discover more and more bugs lately, you'd probably better handle it yourself with inkey\$ or peeking the hardware address, and a printing routine.

>

>> >2) How can I turn off the ColSplit-command? I made a rainbow background

>

>It says "Not enough custom copper space". I have not used a lot of the

>Display-Library, I used the old Slice commands like "ColSplit", "RGB" etc.

>Could you give me an example of the DisplayRGB command?

Here's some code attached to give you an idea of what to do to handle the

Copper

CopperFade.bb2 Fades copper. Ripped from one of our games we never released because of some serious bugs. This intro picture has a rainbow which fades together with the palette. Unfortunately the code is ECS only, and uses a jerky fader. That's why I've included the next two files.

CrossFadeDemo.bb2 A better X-fader in AGA, also showing you the advantage of X-Fade over the default Blitz2 fade commands. It's programmed in ASM for speed, but since all it does is change the Palette, without really altering any copper data, it should also be

possible and fast enough in Blitz commands.

CopListDemo.bb2 Demonstrates manually altering the coplist data. I programmed it once because someone on the list complained about DisplayRGB being to slow for the game he wanted.

When you combine those two AGA programs, using the techniques used in CopperFade, you should be able to reconstruct an AGA CopperXFade.

BTW. You're free to use the code...

>Damn! So there's nothing I can do? :-(

There should always be a way. It's not an AMIGA limitation. It's BLITZ only, so someone should be able to help you with it.

>

>Let me explain the problem a little more:

>next to them. It's a 16x16 area (all bobs are 16x16 pixels). The bobs  
>are not BBlitted they are Blitted to the BBlitted ones. They are left,  
>right, below, or above to them. And they are Blitted to both Bitmaps.

>

I've had exactly the same problem, only those bobs that got unblitted, were BBlitted to another buffer. As a matter of fact, every BBlit had it's own buffer. Anyway since they are on a 16x16 position and are 16x16 in size, why not use BlockScroll instead. Just add a third bitmap, and for every object, you want to bblit, you BlockScroll that part to a reserved position on that bitmap, Blit (no BBlit) and when you want to restore, just blockscroll everything back. This way you omit the buggy UnBuffer.

>Very strange. I hope you can help!

This is what got me thinking about finding out more about the blitter. It's one

of Blitz most used function together with SetInt, and both are buggy :(

Good Luck,

Serge Veugelers

First of all i would like to thank everybody for their reply on my problems with the Free bitmap command...

I've found the solution, but it's not the free bitmap command :)

I had opened a window and attached 2 GTlists to it. When i used only one Gtlist, the problem was solved...

I did this, because i wanted to open the main screen, but i had to load some things first, and then i wanted to open a listviewgadget, wich was in GTlist no.2 :)

Maybe others will have the same problem, so hopes this helps a bit :)

>256 color mode but only actually uses the first 16 colors and I cut shapes

>from it will the shapes take up more memory than if the IFF was in 16 colors?

Yes, they are now 256 colour shapes and take much more memory than 16 colour shapes. A 256 colour shape takes width \* length \* 9/8 bytes of chip ram. 16 colour takes width \* length \* 4/8 bytes chip ram. So, depending on the size of the shapes, this can be quite a difference.

Best to make them in 16 colours if that is all you are using, and blit with the excess Off/on parameter if your screen is 256 colour.

Bye...

Jake Frederick hat folgendes vom Stapel gelassen,

>Is there a limit to the amount of shapes you can have in memory? For some  
>reason when I try to access a shape past #99 my computer locks. It loads them  
well, i guess you have to increase the number of shapes given in the  
compiler options [RAMIGA]+[o] (menu Comiler/tag compiler options)  
browse the object maximum list and edit the amount of max. shapes  
then it should work quit fine :-)

I have no problems using 1024 shapes in my current project but you should be  
sure

to set the maximul amount of shapes in the compiler options which as a pure  
coincidence is set to a maximum of 100 shapes!

If you keep the Runtime Error checking on it'll warn you about that type of  
thing.

Cheers,

Paul

Use the command "Windowfont fontnumber,style"

The stlyes are 0 = normal

1 = underline

2 = bold

4 = italic

You can also add them, so "Windowfont 0,3" would make text printed in that window appear in font 0 in bold underlined. I am not sure how to make the GTgadgets do this.

## 1.64 Setperiod again

From: "C.J.R.Jarvis" <C.J.R.Jarvis@wkac.ac.uk>

Subject: Setperiod again

Date: Sun, 22 Feb 1998 14:52:53 -0000

hello,

I tried the help I got for setperiod, but it still doesn't work.

The syntax (according to the manual) is SetPeriod Sound,Channelmask (?).

It won't accept any other parameters, and the Channelmask option will only accept 1-15 (obviously) I cannot put in figures of 200-300 as I was recommend.

Arg!

please help

---

>recommend.

>Arg!

>please help

The problem is in the de-bugger, the command works. Try the code below:

```
;this is just a little demo of how to overcome the pitch command problem
```

```
;in Blitz - try it first with Runtime Errors on - it will give you an
```

```
;error "Illegal Chanel Mask" <-(yes, that's spelled wrong - but that is
```

```
;what it says) if you enter anything over 15 - it seems to think you are
```

```
;trying to set a channelmask! Now turn Runtime Errors off - it works
```

```
;perfectly! A value of about 425 gives the normal pitch - higher numbers
```

```
;gives a lower pitch - try 700 - and lower numbers speeds it up - like 300.
```

```
;of course, the usable range will vary depending on the speed the sample was
```

```
;originally recorded at.
```

```
;To use this while developing the program, include the two compiler commands
```

```
;shown below - but don't forget to comment them out again when you make your
```

```
;executable program
```

```
;
```

```
;
```

```
;
```

```
LoadSound 0,"ayecarumber" ;load an iff sound for testing
```

```
Repeat ;start here
```

```
Sound 0,15 ;play the sound
```

```
Print "Enter pitch : " ;just a slight prompt
```

```
a=Edit(8) ;get user's input in a crude way
```

```
If a <1 Then End ;if it is 0, we're outta here!
```

```
;------
```

```
;Runerrsoff ;tell the compiler to not check this
```

```

;-----
SetPeriod 0,a ;set the new pitch
;-----
;Runerrson ;ok, we can use the debugger again
;-----
Forever ;and go play it again
There is also another command, Freq, which works similar. But it only alters
the pitch temporarily, so must be used each time you play the sound. It is
used AFTER the sound is played:
Sound 0,15
Freq channelmask, period
This command does work with the debugger on.

## 1.66 Re: Setperiod again

```

From: Paul Burkey <burkey@bigfoot.com>
Date: Sun, 22 Feb 1998 17:15:21 +0100
Subject: Re: Setperiod again
Hi C.J.R.Jarvis,
> I tried the help I got for setperiod, but it still doesn't work.
> The syntax (according to the manual) is SetPeriod Sound,Channelmask (?).
I thought it was 'SetPeriod Sound#,Period'
> It won't accept any other parameters, and the Channelmask option will
> only accept 1-15 (obviously) I cannot put in figures of 200-300 as I was
> recommend.
It's not a channel mask. It's a period setting and it works fine with 200,
300 and I tried it with 2000 too. I'm not sure about the valid range but
it seems to accept ANY figure I feed it. Well to be honest I stopped trying
when I reached the billion mark ;)
God knows what it sounds like because I didn't actually play any sounds
with the periods I tried but it gave no errors. You said you couldn't
put in figures of 200-300 so I expect it's not compiling?
Cheers,
Paul

This is really a de-bugger bug. The command works fine if you turn the debugger off. Otherwise, it seems to think you are asking for a channel mask and will give an error for any value >15.

While developing the program, you can put "Runerrsoff" just before this command and "Runerrson" just after to temporarily disable the debugger.

Here is a small example. Just substitute the name of a standard iff sound sample for testing. For most samples, a value of about 300 - 600 will give a normal pitch. Higher numbers will lower the pitch, smaller numbers will raise the pitch.

You will normally get that whine you mentioned with values less than about 200, but this can vary depending on the sample.

## 1.71 SetInt 5 scroller thang

From: BootBlock of Carnage <j.cox2@ukonline.co.uk>

Date: Wed, 04 Feb 1998 20:15:51 GMT0

Subject: SetInt 5 scroller thang

I'm currently coding a diskmag, and there's a scroller at the bottom of the screen. When the user isn't moving the menu selection bar up/down the screen, the scroller scrolls (urm) perfectly smoothly. But when the user moves the bar (which needs to be blitted and things), the scroller starts stuttering and looks poo.

It says in the Blitz manual not to access strings\$ in an interrupt, so there goes the idea of placing the whole thing in a SetInt 5...End SetInt (Vertical Blank) interrupt.

Hmm.... does anyone know how I can keep the scrolling smooth without the stalling?

-----

>Anathem/DimentionX) and it scrolls perfectly AT ALL TIMES, but that's coded  
in

>Assembler.

>Anyone got any ideas?

Well, the processor can only do so much. The only other way to keep the  
scroller moving is to make all the other things go fast enough that they leave  
enough time each Vblank to update the scroller too.

But I think the problem is probably the use of the "Scroll" command - this is  
quite slow. Simple blits and such take hardly any time.

Have you tried pre-printing your text on another bitmap, then using GetAShape  
to grab & blit the required parts to your main screen?

Here is one way:

```
count=(set by experimentation)
```

```
(other set-up code here)
```

```
ReserTimer
```

```
Repeat ; main loop
```

```
(handle user inputs here)
```

```
If Ticks => count
```

```
(do scrolling here)
```

```
ResetTimer
```

```
EndIf
```

```
Forever
```

This will slow down the scrolling enough to handle other events without stalling the scroll routine. Of course, count can be less on a faster machine, so you might also want to check the processor when setting it. You just need to make count large enough to cover the slowest event you need to handle.

Another (but not as good) way, would be to set a CIA interupt to

---

execute it many times during your main loop, then you just check each time if the Blitter has finished and do the next Blit- there's a good section in the Dev docs on CIA interrupts.

Another (even worse way), would be to manually call your blitter check routine at various (appropriate) points through your main loop- not very flexible I know :-/

The other thing to check out is some of the Amiga assem web sites, as they have a lot of assem examples not found elsewhere.

<<http://home.sol.no/~tj1040/assem/>> this site has some good stuff on it.

> but when it's deactivated the blitter freezes.

Firstly the \$68 is level 2 autovector and blitter interrupt is level 3 interrupt so it uses the \$6c autovector!!!

What kind of blitting you maked? and how many bitplanes there were?

What I mean is that maked you the blitting by hitting the hardware directly

or used an blitz command?

> Another funny thing is that the IRQ keeps occurring even when I blit on=

ly

> once, I see a rainbow of colors. I \_do\_ flag the IRQ with MOVE.W

> #INTB\_BLIT,INTREQ

> but it makes no difference...

There is one big problem in this blitting thing!!!... and it is, that blit=

z

needs the "blitter finished interrupt" by itself do be able to do normal blitting!!! The tough part is that you cannot disable this feature without

t

losing the ability to use VBI as well!!

But I think there is a way to do the blitting handler if you do the VBI

as well... this means that you can do only blit mode things

!!!Start of example!!!

This is NO way complete or working example, but as only to give an idea how to

make own interrupt handler!!!

BLITZ; we enter to BLITZ mode

OwnBlitter\_; lets get the blitter to us

WaitBlit\_; wait until it is really free

move.l\$4,a6

move.b\$129(a6),d0

and.l#%1111,d0; Check processor

beqGotVBR; if 0 then we run on 68000 system and the

; vector table start address is 0

leaGetVBR,a5; else we get the VectorBaseRegister

jsr\_LVOSupervisor(a6); it have to be done in supervisor mode

bra.sGotVBR

GetVBR:movecvbr,d0

rte

GotVBR:move.ld0,VBRBase; now we store it to use in the cleanup

move.ld0,a0

move.wintena+custom,d0; get old intena bits

or.w#\$8000,d0; and set the "set bit"

move.wd0,oldintena; and save for later use

move.l\$6c(a0),OldVbi; save the old vector content

move.w#\$70,intena+custom; disable vbi, copper and blitter

; interrupts

move.l#Level3\_Interrupt,\$6c(a0); set the new autovector

move.w#\$8060,intena+custom; and enable VBI and

```
; blitter interrupts.
=2E..
=2E.
your code will come here!!!
=2E.
=2E..
cleanup:
move.lVBRBase,a0; get VBR
move.w#$70,intena+custom; reset VBI BLITTER and copper ints
WaitTOF_; wait top of frame
WaitTOF_; just to make sure ;)
move.lOldVbi,$6c(a0); restore the old autovector
move.woldintena,intena+custom; and enable previous interrupts
DisownBlitter_; and we need no more exclusive use of blitter...
AMIGA; Now we can come back to amiga mode
end; and the execution ends HERE!!!

OldVbi:
dc.l0
VBRBase:
dc.l0
oldintena:
dc.w0
cnop0,4
Level3_Interrupt;; Interrupt handler
movem.l0-d7/a0-a6,-(a7)
Level3_Interrupt_Again:
move.wintreqr+custom,d0
btst#6,d0
bneLevel3_Blitter_Interrupt
btst#5,d0
bneLevel3_VBI_Interrupt
Level3_Interrupt_Exit:
movem.l(a7)+,d0-d7/a0-a6
rte
Level3_VBI_Interrupt:
move.w#2^5,intreq+custom
braLevel3_Interrupt_Again
Level3_Blitter_Interrupt:
move.w#2^6,intreq+custom
```

---

braLevel3\_Interrupt\_Again

!!!end of example!!!

The "example" cannot be runned and all the offsets have to be placed!! an=

d

the handler do nothing more than handles the exeptions.

But hopefully gives you an idea how to make interrupt handler!

If you don't understand something, you are free to ask about. ;)

>thing later on. Also, if you get any CIA interupts working I'd be

>interested as well.

>

Well... I now managed to get the screen blinking with an increase of the COLOR0 (\$DFF180) register. However it only keeps on Blitting

when I turn on the source-code debugger, but it freezes as soon as I

turn it off. When I end the exception like it's described, it doesn't

seem to work. So now I link my code with a jump to the vector that

was originally at zeropage \$68. This works when the debugger is active,

but when it's deactivated the blitter freezes.

Another funny thing is that the IRQ keeps occurring even when I blit only

once, I see a rainbow of colors. I \_do\_ flag the IRQ with MOVE.W

#INTB\_BLIT,INTREQ

but it makes no difference...

The RKM's and Amiga Intern both spend no more than one page to the subject :(

In other words... I'm stuck again :(

Hi Ferrari,

could be the size, as you say. My samples are very small, the largest being 13k, with most about 3-4k. What are you using to generate the samples? I use TechnoSound Turbo II. Maybe there`s a problem with the output format of your sampler...

Subject: Sample period in Blitz-mode

Hello !

First of all thanx a lot to Curt Esser for the help given with samples up to now.

Now I've experimented a bit and foudn that the period of samples goes

dramatically up (ie : frequecne goes down) when played in Blitz mode :-(

How to play a sample in its normal period ? I've tried the setperiod command,

and also tried poking directly in the Blitz sound data, but no fx :-(

Anyone has any better experience with samples in Blitz-mode ?

If you want to see how to write a manual for beginners look at the Easy AMOS manual. Pure perfection. Writing a manual for a language like Blitz is no small task (thats why it has such a crap one). The manual has to serve two separate functions. It must both introduce the concept of the language and its structure, but also serve as a reference book.

Interested in sharing the work?

Have fun,

Hey,check out the best computer manuals ever - the ZX Spectrum (any version) manuals! They were EXCELLENT! And they're the reason I'm using Blitz Basic now.I dread to think how I'd ever have got anywhere if all I had to go by were the Blitz manuals 8(

In fact,I'm pretty sure that a properly written manual with all the hints and tips,bug reports,examples /which explain things/ ;), etc would sell OK on its own...

Same goes for every other development language :(

I've bought DevPac a while ago, hoping it would learn me to use the

include-files. Just a simple book explaining the editor/debugger :(

RKM's and Amiga Intern only use one page to explain IRQ's while it's

a real complicated subject... Some better Docs would be nice...

HEheheh, okay, I shouldn't laugh, but Steve's comment about 'the most disgusting piece of programming ever' is just highly amusing. I have a mate who wrote some Blitz libs and talked to Mark Sibly quite a bit at one stage,

and has seen the Blitz source, and it's a mess.

Nested loops inside nested loops. Multiple lines of assembler code on the one line, including some of these loops... It supposed to be almost impossible to understand, and just as hard to read...

Good luck Steve...

> I get randomly crashes (pretty seldom though).

I'm also using an 040 w/ cv64 but no crashes. I am using the BSS version of Ted which may be more compatible with the 040. What task is causing the guru's?

Are you using MCP? If so, maybe you could experiment with turning off some of the functions that may cause a clash between blitz and the 040. Some people claim that MCP and indeed many other commodities/hacks work perfectly with the 040 but it really depends on which features you are using.

Cheers,

Paul

X-Authentication: IMSP

Haven't seen Paul's code, but if you are using a chunky buffer for your graphics then you can open a NewScreen using the information given by BestModeID, then call WritePixelFormat8() with the size and address of your chunky buffer and your screen's rastport.

This will always work in CGFX/AGA/whatever.

Alternatively, you can call up an ASL requester instead of calling BestModeID (useful if your proggy can run in different resolutions)

You should keep in mind, however, that WPA8 acts as a very slow c2p routine when you are using it with planar screen modes. You might want to get the WPA8 patch called NewWPA from aminet, or even better use a custom c2p for AGA modes.-.

--BOUNDARY.1744715584.1

Hi,

I just wrote a small bit of code that will allow anyone to add a "quick and dirty" CyberGraphX/Picasso96 mode to any AMIGA MODE game. It only contains two functions and I've provided a small demo program to show you how it works. Basicly theres an OpenScreen type function and a ShowBitmap type function. You'll see from the demo source that it only takes two lines of code to change from AGA/RTG so it really is very simple to use.

I am providing this code so that anyone who wants to support CyberGraphX but hasn't a clue how to do it can do so in just a few minutes work but it really is a terrible way to go about it. This system uses the "dump everything to the gfx card each frame" method so you will not get much more than 12fps out of it unless you've got a fast cpu, good gfx card and a Zorro3 bus.

Anyway, this is better than no RTG support at all isn't it! :)

Cheers,

Paul

>

[C.J.R.Jarvis] Int he game you are talking about (Transplant)

the starts in the background are not a bitmap. The stars in the background are individual shapes which are blitted to the bitmap, thus when the player rotates, the individual starts move in a circle. There is no rotation of the background. It would be impossible for you to rotate a bitmap background at reasonable speed. I've only ever seen bitmap rotation done on one of Fairlight's Demos!

Chris Jarvis

## 1.92 Re: Rotate a BitMap

From: bohdan\_jechnowsky@csgsystems.com

Date: Tue, 10 Feb 98 16:50:32 -0600

Subject: Re: Rotate a BitMap

Well, rotating large bitmaps can be a problem. This idea is actually one of Curt Esser's, but since we're working on the same project I'll let you know what his theory is.

Break the bitmap into smaller bitmaps, say 16 slices of 59x638. Rotate each of these individually and then copy them back into one larger bitmap which will fit all the rotated slices.

You may have to break it down more if there are still problems with memory, but this method should work for any size bitmap.

Hi!

Does anybody know how i can rotate a bitmap with size of 944x638?

Yes, I have found that rotating a bitmap (well, in Blitz, you have to rotate it as a shape) will cause a crash if it is larger than 350\*350. (I am using 256 colour shapes, you may be able to rotate larger ones if they have less colours).

I do have some code that will determine the size of the new bitmap needed (depending on the degree of rotation). And the above method should work, although I have not yet tried it. You will also need to do some memory checking, especially with a bitmap this large, to avoid a crash.

But first, this all depends on what you are rotating it for. If you are trying to create an effect in a game or something, forget it! Rotating a shape takes quite a bit of time - way too long for real-time animation, even with small shapes. If that is what you are doing, you are better off to use

---

some sort of vector drawing routines.

--

Yours electronically,

Curt Esser

> ship. I saw it done very fast in a game called "Transplant".  
> What do you mean with vector drawing? And how can i do "memory  
> checking"?

>

I think I remember the game Transplant, a damn good game :)

Anyway, I don't think Transplant rotated a bitmap to get the effect.

You'll notice that all the stars are just dots or very small shapes  
and are not actually rotated them selves. AFAIK, the effect was  
achived by storing the stars as co-ordinates rather than a bitmap and  
then rotating the co-ordinates around the ship before plotting each  
star individually.

I hope thats clear, if not then let me know and I'll try again =)

BTW Tommi, hopefully you should get this twice but I'm not sure if my  
mails have been getting to the list or not (maybe no one wants to talk  
to me ;)

What i'm trying to do is a pic of stars in the background that i would

like to rotate left or right depending where the player turning the

ship. I saw it done very fast in a game called "Transplant".

What do you mean with vector drawing? And how can i do "memory checking"?

Subject: Re[3]: clock in a win - timer.device

>04-Feb-98, Nelson Sandalwood said:

>NS>> 2. Get the timer.device to send you a message every second.

>NS>> Then update the clock

>NS>

>NS> I couldn't get the timer.device to work with the blitz lib I have for

>NS> it. Any ideas about it?

>NS>

---

Some time ago I translated a source in C, using the timer.device .

The only purpose of this program is to sleep during an exactly time (in secs and milisecs). You can use it in the loop section to make sleeping your program a little...

It is based on SimpleTimer.C

You can also found this prog on Aminet, in dev/basic/MaVaTi\_BlitzWork.lha

Here is the little code :

```
#TR_ADDREQUEST=9
DEFTYPE .timerequest *tr ; IO block for timer commands
DEFTYPE .timeval curval
Function DELETE_TIMER{*tr.timerequest}
DEFTYPE .MsgPort *tp;
If *tr<>0
*tp = *tr\tr_node\io_Message\mn_ReplyPort
If *tp<>0
DeleteMsgPort_(*tp)
End If
CloseDevice_(*tr\tr_node)
DeleteIORequest_(*tr\tr_node)
End If
End Function
Function.l CREATE_TIMER{unit}
; return a pointer to a timer request. If any problem, return null
DEFTYPE .l error
DEFTYPE .MsgPort *timerport
DEFTYPE .timerequest *TimerIO
timerport.l=CreateMsgPort_
If timerport.l=0
Function Return(0)
End If
*TimerIO.timerequest=CreateIORequest_(timerport.l,SizeOf .timerequest)
If *TimerIO=0
DeleteMsgPort(timerport) ; Delete message port
Function Return(0)
End If
error = OpenDevice_("timer.device",unit,*TimerIO,0)
If error<>0
R=DELETE_TIMER{*TimerIO.timerequest}
Function Return (0)
```

```
Else
Function Return(*TimerIO.timerequest) ; TimerIO (Type timerequest)
End If
End Function
; more precise timer than AmigaDOS Delay()
Function.l TIME_DELAY{*tr.timerequest,*tv.timeval}
*tr\tr_node\io_Command = #TR_ADDREQUEST ; add a new timer request
*tr\tr_time\tv_secs=*tv\tv_secs
*tr\tr_time\tv_micro=*tv\tv_micro
; post request to the timer -- will go to sleep till done
DoIO_(*tr\tr_node);
End Function
; main
; get a pointer to an initialized timer request block
*tr.timerequest=CREATE_TIMER{unit}
; some examples :
; sleep for two seconds
NPrint "-----"
curval\tv_secs = 2
curval\tv_micro = 0
R=TIME_DELAY{*tr,&curval}
NPrint "After 2 seconds delay"
; sleep for 200,000 micro-seconds = 1/5 second
NPrint "-----"
curval\tv_secs = 0
curval\tv_micro = 200000
R=TIME_DELAY{*tr,&curval}
NPrint "After 1/5 second delay"
; sleep for 1/2 second
NPrint "-----"
curval\tv_secs=0
curval\tv_micro=500000
R=TIME_DELAY{*tr,&curval}
NPrint "After 1/2 second delay"
; deallocate temporary structures
R=DELETE_TIMER{*tr}
End

Subject: Re[2]: Running blitz with a 040

Hi Anton,

> > get randomly crashes (pretty seldom though).

> > for example, the tcp-functions (from paul) will load into the

>

> Paul forgot to close the bsdsocket lib in his TCP\_Funcs (Miami won't

> exit if you don't). Also, you have to remember to free the read buffer

> allocated in TCP\_Funcs.

I remember taking a look at the code after you told me about that

bug and I realised that the bsdsocket.library is not even opened

by me because it's actually a blitz lib.

I do open and close it as part of a "check for existence of the library"

but once thats over I leave it to blitz to open and close the library

for me just as I would for dos, exec, graphics libraries. The

functions have been tidied up a bit since that 1.6 version so I'll

upload a new one soon.

By the way, does anyone know of an RFC that I should make available

on my web site? There are over 2000 RFC's each with very technical

titles so it's not easy to work out which are the important ones.

I'm wondering if theres an RFC for SMTP (post servers).

Cheers,

Paul

## 1.104 Re[2]: Fast AGA Screen Fader

From: Paul Burkey <burkey@bigfoot.com>

Date: Tue, 24 Feb 1998 15:09:18 +0100

Subject: Re[2]: Fast AGA Screen Fader

Hi Julian,

> > anyone know the most system friendly way to set the palette of a  
 > > colour Intuition screen is?  
 > LoadRGB32() for lots of colours and SetRGB32() for a single colour. All  
 > you need is a pointer to your palette and the screens colourmap I think.  
 thanks!. If anyone wants to know how I got it to work, I used  
 the following code:

```
; Supply a blitz screen# and a blitz palette#
Statement UsePalette{scr.w,pal.w}
LoadRGB32_ ViewPort(scr),Peek.l(Addr Palette(pal))
End Statement
```

I've not fully tested it yet but I think it's working better  
 than 'Use Palette' and I'd suggest anyone should use this method  
 instead of Use Palette. For anyone who missed the last message  
 I had problems with 'Use Palette' not setting the palette of  
 screens if the screen is 'behind'. Now it works.

> Did that AHI stuff work?

For the last month I've been without sound on my system but  
 I'll make sure I sort it out soon so I can test that stuff  
 you sent. You sent a rather interesting function and I'll  
 try it out ASAP but could you send me the necessary setup  
 code? I've got things a bit mixed up over here :)

Cheers,

Paul

Cool, it works fine when the window is activated. What could I do to keep it updated when I de-activate the win?

JK> 2. Get the timer.device to send you a message every second. Then update

JK> the clock

Yeah, this seems to be the best way. I've just tried the way Hans Olsen

handles timer.device (thanx Serge! ;) and it seems to work very good here. (He made an include

with all the functions and it's easy to create any kind of timer).

Unfortunately I don't have any documentation about devices, so it isn't easy for

me to understand how those functions work...

JK> Ciao,

JK> Julian Kinraid

### 1.108 Rescaling images

From: Curt Esser <camge@ix.netcom.com>

Date: Tue, 03 Feb 1998 18:48:41 -0600

Subject: Rescaling images

---

Hi,

I am trying to do proportional re-scaling of images. Since the screen is not really square (we are using 640x400), increasing or decreasing x and y by the same number of pixels won't work.

So, I tried using the formula  $x = y * 1.6$ , which should give correct results.

Also tried  $y = x * .625$

And both work, if I am increasing the size. But when I decrease the size, after a certain point the x dimension starts to shrink too rapidly.

This is due (I think) because of the error involved (I can't really move .6 pixels)

This is a continuous action thing - as the user moves the mouse, a "rubber band" box is expanded or shrunk accordingly, and when the button is released the actual re-sizing is done.

Any ideas?

Thanks, and bye...

--

Yours electronically,

Curt Esser

>after a certain point the x dimension starts to shrink too rapidly.

Can't you just use floats or quicks for the x and y variables, so they remain correctly proportioned, and then round them to draw your box and actually set the size?

Regards

Mike Child

Try having another array of all the directories you want to ignore.

---

Now when you find a dir, you check all the names in the array of the ones you want to ignore, or use a binary search method if the array is sorted. For example:

```
dim ignore$(size_of_ignore)
; Fill up ignore array
chdir <dir>
while MoreEntries
file_name$= Entryname$
If EntryDir
found=false
for i=0 to size_of_ignore_array
if ignore$(size_of_ignore_array)=file_name$ then found=true
next
if found=false
name$(x) = file_name$
x = x + 1
end if
next
wend

Seems to me your problem here is your understanding of string comparison techniques. You're not actually comparing "goobah" to anything, hence your problem... try this instead:

```
chdir <dir>
while MoreEntries
file_name$ = EntryName$
If EntryDir AND file_name$<>"goobah"
name$(x) = file_name$
x = x + 1
wend
```

what does EntryDir do? Don't have my Blitz to hand.

Date: Wed, 18 Feb 1998 21:15:12 +1000

Subject: Read dirs and ingore....

Hiya folks,

Thanks to those who helped me with the Read Dirs problem I had, and now

I have another. (Whats new ?!)

I read the dir into an array easily, but I need to ignore certain directories.

I know the name of the directories I need to ignore, and I wanted to do it

all in one big go, ie, when reading the dirs in...

I tried:

```
chdir <dir>
```

---

```
while MoreEntries
```

```
file_name$ = EntryName$
```

```
If EntryDir AND NOT "goobah"
```

```
name$(x) = file_name$
```

```
x = x + 1
```

```
wend
```

Now, say one of the dir names is "goobah" and I need to ignore it and not include it in the name\$() array, how could I do that ?

Help.... Please.... :)

>the EASY bit, but, how do I go about recognising directories from files in  
>Blitz ? And how do I read a directory in the first place ???

>HELP!!!

As luck would have it, I have just gotten this example ready to upload to  
Aminet!

I guess you get to be the "beta-tester".

The example actually creates an array of the directory names and a separate  
array of the filenames, but it should be easy enough to yank the file name  
stuff out of it.

=====

If anybody else needs this, you will find it on Aminet in dev/basic in a day  
or two.

I also sent examples there for re-mapping a picture to a screen's colours  
(including WorkBench screen) and making a fontrequester with a taglist (this  
gives MUCH better control of the options - check it out if you are letting  
users pick their own fonts).

Bye...

Yours electronically,

Curt Esser

Subject: Re: Read dirs

Hi Rodney,

> I want to be able to read a directory of a disk into say an array, then  
remove

> all the filenames from the entries, and just keep the names of the  
> directories.

instead of removing the files from the list you should simply ignore them

---

as you're reading the directories.

> From there I will need to CD into the dir and perform some actions. This is  
> the EASY bit, but, how do I go about recognising directories from files in  
> Blitz ? And how do I read a directory in the first place ???

Use the ElmoreDosLib which you may already have. Use the "Examine" command  
to examine the contents of the directory and then use the "MoreEntries"  
command

to examine the individual file/dir entries. Here's a basic example.

```
Examine MyPath$
```

```
While MoreEntries
```

```
If EntryDir
```

```
; Deal with the directory here.....
```

```
EndIf
```

```
Wend
```

```
Cheers,
```

```
Paul

I posted this to the list before, but this was a long while ago. It's the  
original source of MyDir.bb2 made recursive by me. Alternatively there's  
als Elmores DOS-lib. It's a little simpler than using structures, but it  
works about the same. It's fully functional so enjoy...

## 1.121 Re: Read dirs

From: Toby Zuijdveld <hotcakes@abacus.net.au>

Date: Wed, 02 Sep 1992 12:58:40 EST10EDT

Subject: Re: Read dirs

On 11-Feb-98, rodneyn@aic.net.au wrote:

>Blitz ? And how do I read a directory in the first place ???

>HELP!!!

I seem to recall an example back in BUM5 aroundabouts, I'll see if I can

scratch it up...

\*Using the ElmoreDOSLib\*

```
ChDir "RAM:"
```

```
While MoreEntries
```

```
Print LSet$(EntryName$,30)
```

```
If EntryDIR then Print "Dir " Else Print LSet$(Str$(EntrySize),6)
```

```
Print EntryBits$, " ",Date$(EntryDate)," "
```

```
Print EntryHour,":",Right$("0"+Str$(EntryMins),2),":"
```

```
NPrint Right$("0"+Str$(EntrySecs),2)
```

```
Wend
```

```
MouseWait
```

```
End
```

As you can see from the EntryDIR bit it is EASY to tell what entries are directories. Just log em to a Dimmed array and sort thru em then.

Hope this helps!

Subject: Re: random number

Hi Christophe,

> Does anyone know a way to get 10 number generated randomly within 1-60

> range without get the same number twice

I'd guess you'd have to use an array to remember the numbers because

you'll need to use them during the calculation. So using an array

here's a simple example. It's not the simplest way but it's quite small

and fairly random too.

;-----

```
Dim num.b(10)
```

```
For n.b=0 To 9
```

```
Repeat
```

```
num(n)=Rnd(60)+1
```

```
check.b=0
```

```
While check<n
```

```
If num(check)=num(n) Then check=10 Else check+1
```

```
Wend
```

```
Until check=n
```

```
Next n
```

```
For n=0 To 9 : NPrint num(n) : Next n ; display numbers
```

;-----

anyone make a better one? :)

Cheers,

Paul

The Geek Gadgets project (<http://www.ninemoons.com>) has ported freeware U=  
NIX

implementations of JAVA to AmigaDOS. From what I can tell, they're fully=  
compatible, except for their inability to do any sort of graphics routine=

s

(yet).

Oh, and Pascal (Turbo Pascal) also has a very strong base of programmers =

as

far as MS-DOS goes. Pascal is an Oberon or C-like language that is a bit=

easier to understand. I'm rather fluent in Pascal. For DOS there's also=

the

quite outdated QuickBASIC from Microsoft that produces kinda big and slow=

code

but it's a pretty powerful and extremely easy language to understand (eve=

n

though it has its quirks, just like BlitzBASIC). =

Oh, and there's also Borland's Delphi for Windows, which is a fully 32-bi=

t OOP

combination of Pascal and C for Windows 95, NT, and 3.1. It is supposed =

to be

really, really good and has a lot of extensions for database programming.=

And unlike the Amiga, don't even think of doing Assembly code if you're

programming Windows... =3D)

### 1.133 Parallel port help

2 Mar 98 11:29:13 +0200 (EET)

From: "Ott Aaloe" <ott@mail.lbi.ee>

Date: Mon, 2 Mar 1998 11:29:09 +0200 (EETDST)

Subject: Parallel port help

Hi all!

A question for hardware gurus out there ;)

I'm about to make use of 4 player adapter (connects to parallel port) for a game...I even found a library that supports it (Leading Edge released it, if I'm not mistaken)...fine, it'll probably work (I haven't made the adapter yet)...BUT...I need to receive some more external data at the same time 2-3 bits...so i thought of using the other bits in parallel port...like paper out (pin 12), and Select (pin 13)..the question is HOW...Is there a register for these bits (like for data bits). Any help, like always, very welcome ;)!  
 \*\*\* Ott (ott@lbi.ee)

### 1.134 Re: Parallel Port

2 Mar 98 16:05:40 GMT

From: "Andrew Ballard" <57228701@mmu.ac.uk>

Date: Mon, 2 Mar 1998 16:04:16 GMT

Subject: Re: Parallel Port

if you are not bothered about being system friendly or not, you can be naughty and access CIA-A and CIA-B directly by memory. One of these controls the parallel port, they also control other stuff like a few disk drive control codes, joy port fire buttons and timers. You can set up each of these "bit lines" (i just made that up) to either input or output and then read or write to them in byte blocks as you wish.

The addresses for all mentioned above are in the blitz manual at the back.

I hope this is useful, it probably isnt as it is system unfriendly...

>been able to grasp.

There is not really much to say about Peek and Poke...

The Poke command is to put a certain value at a certain address

Syntax: Poke.type #Address,Value

The Peek function works the other way around. It retrieves a value from a certain address.

Syntax: Value = Peek.type(#Address)

For instance to change the rgb-value of color 0 (\$DFF180) to white , you would do

Poke.w \$DFF180,\$FFF

To read the values from the COLOR0 register, you would do

RGB.w = Peek.w(\$DFF180)

That's all that is to say about it really...

## 1.137 O`Basic

Date: Sun, 01 Mar 1998 19:09:25 +0000

From: Paul Lathwell <paul@blitzer.demon.co.uk>

Subject: O`Basic

Sorry for this slightly off-topic post, but some of you may remember I posted a msg a while back enquiring about a PC version of Blitz, or something similar. Recently a friend gave me the URL for a rather good basic language for the PC, any PC users reading this mail who may be interested are advised to take a look...

O`Basic - <http://www.celsoft.com/>

It`s a shareware product costing only \$40 to register. IMO, just as powerful if not more powerful than Blitz although it doe not seem to offer any kind of direct support for writing games. For Utils and serious software it`s certainly worth a look. ;)

## 1.138 Output handler

From: Dennis de Haan <dennis.haan@tip.nl>

Date: Mon, 16 Feb 1998 13:03:39 +0500

Subject: Output handler

Hi everyone,

Yep, another little problem i`m having here... I want to view the output of an program (like LHA or LZX or something like that) and i want the output in my own window REAL TIME!

Does anyone know how to fix this? When i use the CON: like,

Lha -2 x BLABLA.LHA >CON:

Con opens a window on my workbench screen, and that`s not quite what i had in mind :)

Is it posible to give some sort of adress to the window where all the output goes to, so i can replace then `>CON:` for something else that will appear on my own program`s window?

Thanks in advance for all replies :)

cYA!

```

._____._____
|/_____. _ _ ^ _ ^ _ _____|/

> on my own program's window?

> ...

In the past I did this,

o Create a named pipe,

- Create a MountList for your very own named pipe

- Somewhere in your application, mount the named pipe before using it

o Send the output of the command to the named pipe,

- As usual : Lha -2 x BLABLA.LHA > My\_Very\_Own\_Named\_Pipe:

o Read the named pipe from within your application,

- As you would read the content of a serial file

(A pipe is a FIFO memory file)

I hope it helps, good coding

> >flickering.

> >Is this OK???

> YES Wblit & BitMapToWindow are the only 2 command working with cgx

As well as all the Graphics.library calls like WritePixelFormat8\_() and

ScrollRaster\_()

as well as many other blitz commands such as:

WPlot, WCl, WCircle, WLine, WScroll... eg, all the window commands.

Plus the usual Window and screen commands like ScreenTags, RastPort()

and the mouse pointer commands. So everything that works in

a system friendly way will work with CyberGraphX and Picasso96.

Cheers,

Paul

> Is this OK???

WBlit and BitMapToWindow are basically the same thing. I'd expect the WBlit  
command actually calls BitMapToWindow command.

Blitz Bitmaps are in chipmem and are in planar mode and gfx card displays  
are in gfx card memory and in chunky mode which explains why blitting  
from one to another is slow and flickery.

Cheers,

Paul

### 1.144 Number of gadgets ?

From: James L Boyd <jamesboyd@velvety.demon.co.uk>

Date: Sat, 07 Feb 1998 01:38:22 -0000

Subject: Number of gadgets ?

Hi everyone,

Does anybody know if there's a maximum number of gadgets you can have in one gadget list...?

I'm trying to use 141 (!), numbered 0-140, but when my program runs, the gadgets from 128 onwards are numbered negatively : -127, -126, etc, (according to GadgetHit)...

Is it OK to use negative numbered gadgets, or is it possible to have gadgets numbered above 127 ?

Thanks for any help...

## 1.147 Re: MUI / newbie conflict!

From: Andreas =?iso-8859-1?Q?H=E5kansson?= <andy@bjuv.mail.telia.com>

Date: Mon, 09 Feb 1998 19:38:11 +0100

Subject: Re: MUI / newbie conflict!

Hello,

Well you have a real classic on your hands there m8.

The MUIBBLib is as old as the radio. It was hard to you, and the code really tended to get HUGE. But dont fear m8.

Thats why we released a new MUI lib for blitz, which is really easy to use. It' s been rewritten from scraths and the usage has changed drasticly. This is the MUIlib you should get your hands on and use from now on.

When I say 'we' I mean the members in Vivid Imagination. Erwan Fouret and myself has rewritten the lib. So dont even bother to try and use the old lib.

You can find the new lib on aminet in dev/mui. The archives name is mui38dev-bb2.lha, you should also get the mui developer files (it includes all the mui autodocs), you can also find this on aminet in dev/mui, and the archives name is mui38dev.lha. Btw to the rest of you out there. Version 1.4 of the MUI lib is on aminet now. It has some new commands, such as MUIBitmapObject, MUIShapeObject, MUIRedraw etc, and it has brand new list routines, since the old ones where full of bugs, that has been removed now. Happy MUI'ing..

Please send all MUI related questions directly to me or Erwan Fouret, and we will gladly help you with you MUI problems (note how ever that we WONT write whole GUI's for you, not will be trace down a bug in a 500line long code, so please narrow downm the bug code.)

ByE!

## 1.148 MUI / newbie conflict!

From: et@enterprise.net

Date: 08 Feb 98 23:12:23 +0500

Subject: MUI / newbie conflict!

Hello, I installed MUIBBLib by Erwan Fouret, with libnum=10. I only have the one example code, which is ShowHide, and it won't compile..

All of the MUI\_ commands are tokenised (erm, blue!) except for the one in this line below, and it stops with either syntax error or "array not yet dimmed."

```
*cm1 = CheckMark(MUI_TRUE)
```

Is this the best MUI / BB package to use? Have I done something wrong? Also I really need a simple example if someone has such a thing..

While I'm posting my first message, I will also mention out that I couldn't get TCP-Extension to work reliably, has anyone had any problems with that? Crashes horrifically on get\_host\_name.

Hopefully,

et/

## 1.149 MPEG Header?!?

>Does anyone know the header? (both MPEG mov and MPx. if not the same)

I don't know offhand as I don't have any MPEG's here to look at. I do have a small program I made that will read a selected number of bytes of a file

header and show them to you in a window for examination. This makes it easy to find such information. Let me know if you want this.

>Also a friend of me told me that on PC he can find out if a file  
>is a ascii file. Does anyone know if i can do this on Amiga?

Well, an ascii text file has no header, but it can be recognized fairly accurately by what it DOESN'T have. There will be no non-printable ("control") characters other than "control J" (linefeed character). So if you read the first 1000 bytes or so and find nothing but CHR\$(10) or characters =>CHR\$(32) it is safe to assume it is a standard text file. An AmigaGuide file will be the same, but will always start with "@DATABASE". And any other type of file will be loaded with "control" characters.

Note that this DOES NOT apply to Word Processor text files!

Subject: more problems - Bitmapwindow?

Date: Fri, 13 Feb 1998 10:09:49 -0000

Hmm.. I think you'll be getting a lot of e-mail from me, as I find the blitzmanual totally unhelpful.

1. How do you use the command BitMapWindow to create a cropping area. Basically I'm doing the display for my 3d hiredguns game, but there is no way I can keep the blits inside the desired area, so I want to use Bitmapwindow. However. This command doesn't seem to do anything.

Can anyone give me an example code with this command in? Also explain how double-buffering will affect its output.

2. How does one BBlit in a double buffered game? Whenever I 'unbuffer' the shapes, the bits of background are often rerendered to the wrong bitmap.

3. How do you create directories within blitz. I found a list of OS system commands at the back of the manual, but again there was very little help in the manual on usage.

thanx again

Chris

>Can anyone give me an example code with this command in? Also explain  
>how double-buffering will affect its output.

---

You must use "BitmapToWindow" every time you change the bitmap. This command does not send any further drawing you do on the bitmap to the window.

>2. How does one BBlit in a double buffered game? Whenever I  
>'unbuffer' the shapes, the bits of background are often rerendered to  
>the wrong bitmap.

You need to use two buffers. And BBlit to the correct one, depending on which bitmap you are drawing on.

>3. How do you create directories within blitz. I found a list of  
>OS system commands at the back of the manual, but again there was very  
>little help in the manual on usage.

Use the command MakeDir "NewDirectoryName" to create a new drawer. If you have not yet done it, unpack your LibsDev.lha file. In this you will find the docs for the "3rd party" librarys which are included in Blitz, but are not mentioned in the manual. There are many useful commands in there. Also, check on Aminet/dev/basic and on the web sites included in people's signatures for many good Blitz examples and tips.

### 1.155 MOD`s and MED`s....

From: "Wright J.A" <J.A.Wright@rhbc.ac.uk>

Subject: MOD`s and MED`s....

Date: Fri, 13 Feb 1998 20:17:53 -0000

Hello ppl,

i just got a small problem with playing modules.... a friend of mine wrote a MED module with OctaMED SS, i tried to use it in one of my programs, but the tempo was completely wrong.... i then discovered that the tempo needs to be set to 125 bpm in OctaMED SS, and then there is some other number that is usually about 4, and that seems to be how many times you need to call PlayMED per 50th of a second (done with a SetInt 5). I then tried Loading the module inot PROTracker, because we couldn`t get the module to be ok at 125 BPM... i set the tempo up so it sounded alright in PROtracker, and resaved it. But when i loaded in the MOD into Blitz, the tempo got completely messed up again!!!! also when i save MED`s from OctaMED SS, blitz seems to set some of the instruments as being Looped when they aren`t.... so what`s going on???? I noticed that modules from demos and games don`t always have to be at 125 BPM... so someone just tell me what the specification for a module to be used in Blitz exactly is.....

thanks,

James

>handle all the stuffs...

Obviously, you would need some way for the single modules to talk to the main program. This could be done with message ports, or with arexx. I think arexx might be the best. When your main program recieves a 'do\_this' arexx message, your program will call a subroutine and return the result to the module. You would also need a set of guidelines for people wanting to write modules.

Oh.

It appears to be fine on Netscape. I haven't been able to try it at home because my A1200 is away being repaired. SO a nice GIF screen shot of Voyager making a shit out of the page would be nice :-)

Please make sure it's a GIF so I can see it on the PeeCee, and don't compress it as that's hassle - just send it attached to an e-mail direct to me please.

SOrry for the hassle...

Cheerio,

Mike.

You need to use the newlookmenus flag when opening a window

I think it's \$20000 or \$200000

Also there was one type of window that screwed up the menu colours  
 but I don't have the problem anymore . I think this is because I use  
 Screentags to open my screen instead of the normal blitz screen  
 command.

hope this helps

Dave

The "newlookmenus" flag is \$20000.

Example : Window 0,50,50,400,150,\$20100E,"Test",1,2

I use always ScreenTags to open my screens now, and haven't any troubles =  
with  
the menus...

I don't know about XBLoadSound, but Blitz'z LoadSound can handle sounds up to 128k.

This is also the system's limit, I believe.

>The second problm is the limit of chipram : it would be very nice to keep  
that

>a ready-to-be-used sound command to play from fast, as announced in the  
>REDSound library : has this ever be implemented ?

I haven't seen this anywhere :(

A simple way is to load the sounds into the RAM: disk, then load in each when  
needed into a sound object, play it, and then free the sound object for the  
next sound. This will save much chip ram if you have many samples.

I have tried this, and there is no noticable delay, even with sounds over  
100k.

For the sounds over 128k, you would need to split them into smaller pieces,  
then "double-buffer" them to get continous playing.

>Alsou would be nice to know in any moment if an sfx is playing or if it's  
>finished ...

I have been able to do this by determining the sounds playing time in Vblanks  
(I have some code that can get this information from the sound object). I  
then set a counter to count the Vblanks, and when this reaches 0 the sound is  
finished. I can send this if you think it will help.

## 1.175 Large sfx load&play

From: Vittorio Ferrari <Vittorio.Ferrari@com.mcnet.ch>

Date: Sun, 08 Feb 1998 15:11:20 +0100

Subject: Large sfx load&play

Hello !

I'm dealing with large sfx (from 50 kb up to 500 kb), representing the voices of our "Sixth Sense Investigations" game. Main problem is that both LoadSound and XBLoadSound commands don't allow to load sfx larger than 64KB.

I'd like to know if there's a chance of workingaround this limit.

The second problm is the limit of chipram : it would be very nice to keep that large sfxs in fast ram and then move them by chunks in chip, and play them chunk by chunk. This way I could spare lots of chipram. The very best would be a ready-to-be-used sound command to play from fast, as announced in the REDSound library : has this ever be implemented ?

MAYbe it could be possible to load the sound in mem, then jump in the sound data and play ust a part of it ... something simialr MUST be done by the diskplay command ... this would solve a lot, as I could load the sfx in fast, then copy chinks of data in chip and play them ... maybe initialising a sound with initsound and then copying data via copymem in someway could work ? A possibility would be to overfragment such large files and then load them in fast, then pass each file in chip and play it, but this would lead to a overfragmentation on HD (already thousand of files are present !), and surely complecity in implementation.

Alsou would be nice to know in any moment if an sfx is playing or if it's finished ...

Anyone having ideas/commands to solve the above problems please mail me !

BTW: X Bones, we all know U're the expert in the field, please come and rescue me !

## 1.181 Incbin exes that use DC statements with absolute addressing

From: C Dimitrakakis <cdimita@essex.ac.uk>

Subject: Incbin exes that use DC statements with absolute addressing

Date: Sat, 14 Feb 1998 01:50:44 +0000 (GMT)

X-Authentication: IMSP

Is it possible to INCBIN executables that use DC statements with absolute addressing... ie you have the asm source

...

lea table,a0

..

table Ds.w 16384

..

you assemble it and then INCBIn it in your blitz code

Will incbin be the same as loading it as an executable through the AmigaOS, ie, will the LEA table,a0 be properly translated to the new location of table?? (in other words will the relocation hunk be taking into account??)

Christos Dimitrakakis (aka Olethros)

I think INCBIN is just a simple 'Include Binary File', and won't alter the file at all, or take into account the relocation hunk.

## 1.183 Re: Incbin exes that use DC statements with absolute addressing

Date: Sun, 15 Feb 1998 22:29:15 +0100

From: Serge Veugelers <sergev@cistron.nl>

Subject: Re: Incbin exes that use DC statements with absolute addressing

At 03:46 15-2-98 +0000, you wrote:

>

[relocatable]

>no, the assembler assembles using an absolute addressing mode -

>[basically an offset relative to the start of the exe] - amigaos then

>uses the hunk information and adds the actual initial address of the

>executable to each such offset, so it is 'absolute addressing

>relocatable on loading'.

:-? You mean the Amiga OS alters your address offsets in the whole

code before executing ? Would be a lot better to use PC as an offset,

wouldn't it ? AFAIK the 680x0 uses the Lea Table(PC) for relocatable code.

DevPac and AsmOne automaticly change the code to PC-relative. At least...

I've checked, and the option can be turned off...

>Blitz only supports 68000 asm, no 68020+ stuff supported.

>(although it does support 68881 directives)

If it's just one 68020+ instruction you want, you can easily put in

that instuction with DC statements. Or a macro. If it's a lot of 68020+ code,

then you should include the compiled source without any headers. Off course

then

you really have to use PC-relative code. I don't know if this option is

available

in assemblers though. DevPac3 talks about S-records, but I haven't got a clue

what that is.

>plan... or how to fill a triangle.

>

>I already know the Geometry formula to draw a line :  $Y=MX+C$  and the

>Trigonometric formula of the Circle... but I did not learned something about

>the triangle...

I think you can test whether a point is within a triangle, by drawing a line from that point to ininity (a point far away). If the line you have just drawn intersects the triangle an even number of times, the point is outside. If your line intersects the triangle an odd number of times, the point is inside. IIRC, this theory will work with \*any\* polygon (even one that crosses over itself.) To get accurate results, you should probably use floating point calculations.

If you want to know how to fill a triangle, there is a better way. You find the gradients of the three edges, and using those you can fill the triangle. I can't remember the exact formula though.

[snip]

Ciao,

Julian Kinraid

## 1.186 IFF Format

From: Alvaro Thompson <alvaro@enterprise.net>

Date: Mon, 02 Feb 1998 18:03:06 +0000

Subject: IFF Format

Hi Blizters!

I was wondering the other day, while I was browsing through my ENV: dir... How do you save a file in IFF format? By this, I mean the IFF Preferences files you see in programs like MUI and the likes. Is there a "standard" way of making these, or what?

cya!

The IFF library handles chunk writing and stuff also parsing it when reading through the file after.

Cheerio,

Mike.

If you use "GetAShape" of the correct size from your bitmap, then SaveShape  
it, you will have an iff "brush" of the right size.

And now, maybe you can tell me how I could load a GIF or other non-iff picture  
in Blitz?

> But, wich is the algorithme to compress each line of the BitMap ?

I don't know if this will be any help, as I don't know the algorithme for IFF compression either...

I have discovered that "GetAShape" will correctly pick up a shape up to 640\*400 (on my system at least). Larger than this, and the shape is completely corrupted.

And it seems not to matter how many bitplanes either - but just the size of the shape.

I also was thinking that maybe it is possible to save the bitmap (with the incorrect size because of the even 16 pixel width limit, and then alter the picture files header to show the correct size information?

This might be easier than trying to make a whole new picture compacting code.

>So for example,if I want it to appear at 32,how do I make it do this?

Try this:

GTSetAttrs (GTlist#),(Gadget id#),#GTSL\_Level,(value to set slider to)

Do this before attaching the GTlist to the window.

Or you can detach the GTlist, do the above, and attach it again to change it while the window is open. You might have to do a redraw on the gadget if you do it this way, I don't remember.

## 1.201 GTScroller positioning

From: James L Boyd <jamesboyd@velvety.demon.co.uk>

Date: Sun, 08 Feb 1998 23:24:07 -0000

Subject: GTScroller positioning

HELP!

Does anybody know how to change the position of a scroller gadget?

I've defined it like this:

```
GTScroller 2,17,4,125+fsize,124,15,"Volume", $8018,4,68
```

I open a window, attach the glist, then I want the scroller to show its gadget at a different position (it goes from 0-64).

So for example, if I want it to appear at 32, how do I make it do this?

I can't set it to 32 when I define the gadget, as the value changes (I'm closing the window, and re-opening it with different values...)

Subject: GTList

Hey all!!

Okey i seem to have a problem with GTList. I don't know if this problem already have been up!!

Okey here goes:

When i compile my program from TED there are problems. But then when i run my created exe file this requester pops up. The requester say's "GTList already attached to window!". Do anyone know why this requester comes up? and how to get it fixed?

Thx alot!!

--

```
_____
/ _////_ // _//_
```

```
//-'_ _//_ _ _//_ _ _//_ / _/
```

```
//\V//_ // _//_ .//_ _// _//
```

```
//_ _//_//_//_ _//_//_//_
```

```
End NewType
Dim Cities.city(1-1) ;1 city
UsePath Cities(0)\Street[3]
\name="Easter Street"
\House[3]\name="Karlsson Family"
\House[3]\Family[3]\name="Hans","Eva","Roger","Simon"
;---
```

In this case we will have  $1*20*200*4=16000$  families, pretty many =)

Naturally they relate to eachother, now lets say your city grows so you end up with 60 streets instead of 20, think of how many more families you will get, there is my problem (i WOULD like to use this way, but if you think of a smarter one - tell me).

I get a "Type too Big" error msg and i was wondering if there is a way of making this error msg go away by increasing some sort of type-memory so i can use this approach?

Thanx in advance.

>with 60 streets instead of 20, think of how many more families you will get,

>there is my problem (i WOULD like to use this way, but if you think of a

>smarter one - tell me).

The only way around this is the way the OS uses it's structures : POINTERS

Instead of actually including a variable of the type street or house, you can

use pointers to such structures (\*SPrt.street). You still have put it

somewhere

in memory though.

---

For structures as big as there it's best to keep a relational database in memory instead of those structures, as maintaining them gets really complicated. This is pseudo code only. Your structures will be flat, "Id->xxx" just means the Id from table xxx  
 (= NewType  
 ) = End NewType

These tables are to use an Id instead of the whole name

```
-----
(Names | (Families | (Houses | (Streets | (Cities
Id | Id | Id | Id | Id
Name$ | Name$ | Housenr | Name$ | Name$
) | ) | ) | ) | )
```

These tables are to actually bind families to houses, houses to streets etc.

```
-----
(House | (Street | (City |
Houses->Id | Streets->Id | Cities->Id |
Families->Id | Houses->Id | Streets->Id |
) | ) | ) |
```

The first set of tables is to reduce memory. A Family, House, Street or City is just referred by it's Id. The other tables are to set the relations.

To check what streets are in what City for Example, you have to read the City-table. The table should be sorted on the Cities->Id. You then have to find the Cities->Id. From then you can list every street (From it's Id) until the Cities->Id changes.

I hope this explains it a little. Relational databases can get quite complex. But you now won't have problems with memory management.

Good Luck,

## 1.207 Free Bitmap?

From: Dennis de Haan <dennis.haan@tip.nl>

Date: Sun, 15 Feb 1998 15:27:35 +0500

Subject: Free Bitmap?

Hi everybody,

I am having trouble using bitmap commands (i think it's the bitmap that's giving me a hard time!)

i have opened a screen, used the screensbitmap command and then blited a shape on the bitmap...

I have then opened two windows and everything works fine!, but when i want to close it all, my amiga hangs and i get errors like: GURU line emulator 111 etc...

Is there another command what can give me the same result as Free Bitmap?

I used the following:

CloseWindow 0

CloseWindow 1

Free BitMap 0

CloseScreen 0

What goes wrong here? Sombody please help me :)

 111  
 > etc...

This could be something to do with freeing a bitmap that doesn't really belong to you. The bitmap belongs to the screen you opened so freeing it could cause a problem. If you want to free the bitmap at the very end of your program then you could simply forget about it and let blitz clean up for you. If you need to reuse the bitmap number then a solution must exist. I'm really not too sure about the way screensbitmap works with regards to free bitmap command.

I expect you're running this with error checking on? So it can't be the blit going outside your screens bitmap or anything like that.

Cheers,  
 Paul

Subject: Re: Free Bitmap II?

Hi Dennis,

> When i just 'End' the program with the 'End' command, i get the message

> Unable to free memory and then all kinds of Guru and illegal commands..

It sounds like you've corrupted the memory ie, blitting a shape that doesn't fit inside the bitmap ie, too deep or too wide although the error checking would pick that up.

> Maybe it's the screensbitmap i use?

> This is still a problem... Can you help me out here?

Why not isolate the code that is causing your problem and send a "ready to compile" example to the list. There's no need to send any shape files as long as you explain what size and depth the shape is.

Cheers,

Paul

If you are in Blitz mode, I think the only way is to print on another bitmap

and pick up the text as a shape.

If you are in Amiga mode, "WJam 0" will make your printing print with no

background.

Use 'FileSeek file#,location' to set your position anywhere inside the file.  
For example 'FileSeek 0,100' would set it up ready to read from 100  
bytes into the file.

Cheers,

Paul

>So I need some rapid speedup!

err, i don't know if you're doing it already by double buffering, ie.

showing the complete bitmap, while the next frame is being drawn in the

background. Something like this should do the job (it's only a schematic =

;-)

=

bitmap=3D0

repeat

show bitmap

bitmap=3D1-bitmap ; toggle between both bitmaps all the time

draw & update bitmap; next frame will be drawn =

=

until mouseclick

let me know if you need some example code (there must be an example on so=

me BUM disk when i remember correctly )

Subject: Fastest way to display a map-tile-screen?

Hi!

I need some advice!

In my game, I have to blit/block the display with tiles(16\*16 shapes)

in a loop. Now this is fullscreen on 640\*256, 256 cols... And a bit

slow... :)

So I need some rapid speedup!  
Is there a faster way than using block to display the map?  
Maybe I should do this in asm?  
HELP ME PLEASE! :)  
Yours,  
MinuteMan2606

calls

>and hopefully works even when the screen is behind! :)

LoadRGB32() for lots of colours and SetRGB32() for a single colour. All  
you need is a pointer to your palette and the screens colourmap I think.

Did that AHI stuff work?

Ciao,

Julian Kinraid

## 1.222 Re: Fast AGA Screen Fader

From: Paul Burkey <burkey@bigfoot.com>

Date: Mon, 23 Feb 1998 20:01:19 +0100

Subject: Re: Fast AGA Screen Fader

Hi Daniel,

> Has anyone got any examples of any fast AGA \*Amiga Mode\* faders. I'm using  
> screens with 256 colour bitmaps attached to them. How do I fade from Black  
> into the colours of the palette?

I currently use the FadePalette command in a loop together with Use Palette.

I'm going to replce that some time because the Use Palette comman only  
works when the screen in 'in front'. That means any time the screen is  
moved to the back durring or before a fade in/out the usrr will be greeted  
with either a black or random palette.

Does anyone know the most system friendly way to set the palette of a  
256 colour Intuition screen is? Hopefully using graphics/intuition calls

---

and hopefully works even when the screen is behind! :)

Cheers,

Paul

>screens with 256 colour bitmaps attached to them. How do I fade from Black  
>into the colours of the palette?

A few days ago, I accidently submitted some files to the list with the name  
AgaCopperStuff.lha. In it there is a CrossFadeDemo.bb2.

It has two ASM-functions :

XFadeInit : Initializes Data structure for smooth fading

XFade : Does the real fading (repeat #steps times)

These functions fade from any palette to any other.

In the demo they are in BLITZ-mode, but all they do is change the  
Palette data, followed by a DisplayPalette #Cop,#Pal. So you just have  
to put the code in AMIGA-mode, and it will work.

You're all free to use it.

Bye now,

Serge Veugelers

## 1.225 Dualpf\_Slice?

Date: Mon, 2 Mar 1998 00:22:00 +0000 (GMT)

From: Duncan JJ Stewart <djjs@st-andrews.ac.uk>

Subject: Dualpf\_Slice?

Hi,

Can anyone help me with a problem I've got with the platform game I'm currently programming?

I'm using Slice to set up a dual playfield, but I can't seem to get more than 16 colours on an AGA amiga! (8cols fg, 8cols bg).

Can anyone give me a Slice command to get better results?

Thanks a lot

Duncan

```

Subject: Re: Dualpf\_Slice?

Hi Duncan,

> I'm using Slice to set up a dual playfield, but I can't seem to get more  
> than 16 colours on an AGA amiga! (8cols fg, 8cols bg).

I've nver used Slices before but I can only guess that the Slice method is the ye'old'blitz graphics library of ECS times while the DisplayLib is the newfangled graphics library of the AGA period.

To put is another way, Slices=ECS DisplayLib=AGA/ECS

Maybe I'm wrong, I never really tried Blitz mode much.

Cheers,

Paul

--

Paul Burkey <burkey@bigfoot.com>

<http://www.sneech.demon.co.uk>

"Doctors say the only treatments they can offer so far are rubbish."

-- The Day Today

But the backdrop colours are getting messed up. I am blitting 8col shapes to the fg bitmap (maybe I should be using sprites?) So I load in the palette as the shapes palette, and then the backdrop palette with the offset 8, but with a 64 colour backdrop, some of the colours get screwed up. e.g My nice yellow sun suddenly turns light blue.

I've tried everything I can think of!

Can anyone help? It's the final routine I need to fix to complete the game!

Thanks a lot

Duncan

## 1.230 Debugger Bug

From: Anton Reinauer <anton@ww.co.nz>

Date: Mon, 09 Feb 1998 12:02:27 +1200

Subject: Debugger Bug

Here's a bastard that had me going for a couple of hours:

Non-printing characters like Chr\$(0) show up in the Cli and printed onscreen as rectangular boxes, but if you Eval a string with them in, in the debugger they show up as blank, and even worse they prevent the rest of the string from being shown.

Then you think that there's something wrong with your source code and start pulling it apart, or there's an odd bug with a Blitz command, and re-write it in assem... [arrgg!]

Also I get the debugger freezing the computer sometimes, and I think it's because I'm running low on chipmem, and there might not be enough left for it to open it's windows- but it should be checking first.

d>Where's (are) my mistake(s)?

WaitEvent halts the program until an event occurs, which is why your  
clock is not updating. Try replacing WaitEvent with:

```
Delay_ 10
```

```
ev.l = Event
```

This way, your program will pause a short time ( 10ms here, I think ) and  
then pick up an event.

Note that this method does increase processor usage considerably ( 20-30%  
increase on my 040 ), but that is because the program is never really  
idle.

Bye,

Alex

JK> Then update the clock

I couldn't get the timer.device to work with the blitz lib I have for  
it. Any ideas about it?

Subject: Re: clock in a win

> Well, with the above listing the clock ONLY updates when I click  
> anywhere in the window. Instead, I want it to be constantly  
> updated. Where's (are) my mistake(s)?

Firstly, waitevent will wait for you to do some thing...

I had a similar problem, the final soluton was a long time in comming,  
but it came...

I didched blitz event handling, and went with a system of singnals and  
interupts...

```
.Setup_Signals
```

```
#SIGBREAKF_CTRL_C = 1ASL12
```

```
#ECHO = 17 ; Sent from the time Interupt
```

```
a = AllocSignal_(#ECHO)
```

```
; stuff for handelng events
```

```
DEFTYPE.Task *echo
```

```
DEFTYPE.IntuiMessage *imsg
```

```
DEFTYPE.MsgPort *iport
```

```
DEFTYPE.Gadget *gad
```

```
*echo = FindTask_("BHHIV") ; used by the Time routine to signal a  
second has passed
```

```
If *echo = 0
```

```
Error{2,"",Off}
```

```
EndIf
```

Ok, BHHIV is the name of my prog... Error{ } is an error function, do  
what ever here...

Having set this up, I needed a way to track the time, and sent a  
signal to my #ECHO signal bit...

```
.Time
```

```
SetInt 5
```

```
If Ticks >= 150
```

```
ResetTimer
```

```
Time = Time + 3
```

```
signal.l = Signal_(*echo,1LSL#ECHO)
```

```
EndIf
```

```
End SetInt
```

## Return

On every vertical interrupt it checks to see howmany ticks have passed, if more than (in this example 150, or three seconds) it resets the timer (ticks) to 0, inceases my Time by 3 and sends a signal to my #ECHO signal bit. Next, all I needed was a way to notice tha tthe bit had been set, and at the same time watch for gadget presses etc...

```
*win.Window=Peek.l(Addr Window(0))
winsig1.l = 1 LSL *win\UserPort\mp_SigBit
winsig2.l = 1 LSL *win\WindowPort\mp_SigBit
*iport = *win\UserPort
.Main
Repeat
sig.l = Wait_(winsig1|winsig2|(1LSL#ECHO)|(1ASL12))
*img = GT_GetIMsg_(*iport)
If *img
EventClass.l = *img\Class
ECode.w = *img\Code
Mx.w = *img\MouseX
My.w = *img\MouseY
*gad = *img\IAddress
GadHit.w = *gad\GadgetID
If (sig & winsig1) OR (sig & winsig2)
If ChangeTime = 1 Then GOSUB Change_Time
If EventClass.l <> 0
If EventClass.l = $20 ;Cause GTMX only works on GADUP
If GadHit = 7
EndIf
EndIf
If EventClass.l = $400 ; key press!
If Right$(Hex$(ECode),2) = "14" ; advance time mode
EndIf
EndIf
If EventClass.l = $40
If GadHit = 1
EndIf
EndIf
If EventClass.l = $8 ;mouse button
EndIf
If EventClass.l = 256
```

---

```
MenuH = 99
ItemH = 99
SubH = 99
dum$ = Right$(Bin$(ECode.w),16)
dum1$ = Right$(dum$,5)
k = 0
For t = 1 To Len(dum1$)
If Mid$(dum1$,t,1) = "1"
k = k + 2 ^ (Len(dum1$)-t)
EndIf
Next t
MenuH = k
dum1$ = Mid$(dum$,6,6)
k = 0
For t = 1 To Len(dum1$)
If Mid$(dum1$,t,1) = "1"
k = k + 2 ^ (Len(dum1$)-t)
EndIf
Next t
ItemH = k
dum1$ = Left$(dum$,5)
k = 0
For t = 1 To Len(dum1$)
If Mid$(dum1$,t,1) = "1"
k = k + 2 ^ (Len(dum1$)-t)
EndIf
Next t
SubH = k
If MenuH = 0
If ItemH = 0
If SubH = 0 Then Gosub Load_Party
EndIf
EndIf
EndIf
EndIf
EndIf
EndIf
EndIf
GT_ReplyIMsg_(*imsg)
While *imsg <> 0
```

---

```

*imsg = GT_GetIMsg_(*iport)
GT_ReplyIMsg_(*imsg)
Wend
EndIf
If sig.l & (1LSL#ECHO)
ClrInt 5 ; disable the interrupt while setting time
Gosub Change_Time ; it will still count ticks,
Gosub Time ; then restart interrupts...
EndIf
Forever

And thats the main bit... The menu system is a bit of a kludge, it
works for OS2 and OS3, but the RKM says not to rely on it working for
ever. They recomend using some C macros, but as of yet I don't have
access to them to know what they do :o(
So, the menus work, might still work under OS3.5 as well, who knows...

There's some docs and examples in C in the developers docs, and a text file on Aminet: devs/asm/Exceptions.lha.

Give us a yell if you get something working, I'll need it later on :-)

There should be a drawer in Fonts: called `_Bullet_Outlines` . The .type  
extensions go in there- you may have to make them by loading the fonts  
into intellifont first so the OS can use them. It should then put all  
the files in the correct place for you

I you have a CD in CD0: with the files in Dir "A","B","C",... "Z", you  
just have to select the "CD0:A" in the left part of intellifont. The  
program then gives you all the fonts within the "A" dir. Then you  
install the fonts with Intellifont. The result is  
a) a file xxx.type in FONTS:\_bullet\_outlines

---

b) 2 files xxx.otag & xxx.font in FONTS:

to open such a font just use OpenDiskFont\_ as usual. AMIGA OS is doing everything else for you

You should have a program called Intellifont in SYS:System though, which  
is, as far as I can tell, exactly the same as Fountain. For some reason

C= changed the name for Workbench 3. :)

Hi paul!

The only reason why you would need Fountain, would be to convert the  
CGFonts to a Amiga Bitmap font.... So if you only need CGFonts...

Dont use fountain :-)

Hygge!

....Kenneth

Programming is like sex - One mistake and you have to support it for the rest of your life...

## 1.253 CGFonts

Subject: CGFonts

Hi,

This is not totaly blitz related but I could do with  
some help here. I'm trying to run a program that uses  
CGFonts but I don't have any CGFonts :) That was until  
I remembered I had a 'Fonts CD' that has been sitting  
there for the past 6 months unused. Now I have 1917  
sets of fonts! The small readme file that I found on  
the CD tells me to copy te fonts to the HD an run  
the 'sys:system/fountain' program that comes with WB2.x  
Now theres the problem. I don't have WB2.x and I can't  
find the program called Fountain on my WB1.3 or WB3.0  
disks. Can someone send me a copy if such a program exists?

Cheers,

Paul

I' ve made Karami in Blitz Basic some day ago, for karaoke party and it can drives CD to play all your CDs audio.

The player is based on SkandalfoCDP source in C.

I've send to Aminet an archive Mavati\_BlitzWork.lha which contains an example

"CD\_Support" program to drive your CD. Personnally, I use the atapi.device

It has been successfully tested by many people with many drives (SCSI and IDE).

Bye.

## 1.255 CDRom playing problems...

From: MinuteMan <atomic-interactive@nwn.de>

Date: Mon, 16 Feb 1998 19:19:43 +0100

Subject: CDRom playing problems...

Hi All!

Again, I=B4ve got some problems:

I need to play some CD audio in my game. I therefor use the =

RiCompactDiskLib. But this strange libs can only be

used together with the cd.device, not with any other one.

Is there a way to get round of this (I use tandemat\_pcmcia.device)?

Is there a better lib? Somebody coded a good CDRom-Player

in bb2?

Thanks for your help!

Yours,

MinuteMan2606

Yes, at the very minimum. What also might be a possibility, is that RWE might be able to take some shares in Blitz, if they couldn't buy it outright, so at least they could look forward to getting something from their hard work. And that way, Acid could still hold onto it if they wanted.

Yes, I was thinking along those lines as well- as Guildhall have  
nothing to lose, and everything to gain.

I've got an old number for Simon Armstrong (name drop, name drop ;-),  
I'll see if he's still there, as I've met him once before, and he should  
remember me.

You would want to put in place a structure similar to Linux/Apache  
Webserver or what Netscape intend to do. The obvious focus in our case is  
RWE who already have a working relationship with Guildhall.

I'm generally in favour of the idea, but its important that this is phrased  
the right way. someone should draw up a solid proposal outlining the  
benefits to Guildhall from this.

Have fun

Eoghann Irving

Great idea, obviously if Guildhall/ACID is going to be intrested it can=B4t cost them anything to upgrade Blitz and they should be able to use any improvements and/or ideas. Why not use a set-up similar to Netscape=B4s, where you can do anything you want to the source as long as Netscape get to use the improvements/ideas (and obviously you can=B4t sell something similar to Netscape just by nicking the source). Blitz would become a better language, Guildhall earn money and everyone get=B4s generally happy.

>versions of Blitz sprouting up!  
RWE could be the centre of development, and people give their ideas to RWE.  
RWE then gives programming tasks out to various people.  
>I don't think ACID should charge for the source code if they DO NOT  
>intend to ever upgrade it. And as for Guidhall they should be happy  
>as it will give them something to sell in the future!  
Probably the best argument to give Guildhall is to say 'If you don't give us the source code, Blitz will slowly die off, and you won't be able to sell anything Blitz related. If you \*do\* give RWE the code, Blitz will get updated and you'll make money through selling Blitz related stuff'. Appeal

to their business nature.

Also, like Anton says, get hold of Simon Armstrong (or someone at Acid) and try to explain that Blitz \*has\* to be updated, and RWE are the only ones that can do it.

If they don't want to give it away, at least find some sort of agreement where it can be updated without having to pay for it.

Ciao,

Julian Kinraid

## 1.271 Blitz2 Source Code

2 Feb 98 15:14:49 GMT

From: "Mike Carter" <57229007@mmu.ac.uk>

Date: Mon, 2 Feb 1998 15:14:33 GMT

Subject: Blitz2 Source Code

Is there any way in which we can contact ACID Software?

If everybody is really serious about keeping Blitz2 alive then why don't we all e-mail the same place and see if they'll 'donate' the old source code to the Blitz list and then all you assembler codes and tear it to bits in order to create ONE improved version of Blitz. Obviously it would have to be controlled in some way to stop rouge versions of Blitz sprouting up!

I don't think ACID should charge for the source code if they DO NOT intend to ever upgrade it. And as for Guidhall they should be happy as it will give them something to sell in the future!

So erm there's my idea anyway. Wouldn't it be nice though?

Cheerio,

Mike.

>

Setup an interrupt and manually position the cursor by reading in the movement of the mouse with "MouseXSpeed" and "MouseYSpeed" and multiply the values by 2. Something along the lines of:

```
Setint 5
```

```
Cursor_positionx + (MouseXSpeed * 2)
```

```
Cursor_positiony + (MouseYSpeed * 2)
```

```
displaysprite coplist, sprite_no, Cursor_postionx,
```

```
Cursor_positiony, sprite_channel
```

```
end setint
```

There is a command called ClipBlit which does exactly what you want.

However it can only be used with Blit as apposed to BBlit or Block

AFAIK.

Hope this helps.

See you,

Liz.

## 1.276 Blitting(Blocking) with skipping pixels

From: MinuteMan <atomic-interactive@nwn.de>

Date: Thu, 03 Oct 1996 23:28:44 +0100

Subject: Blitting(Blocking) with skipping pixels

Hi All!

Another day, another problem: :)

In my game, I have to blit some buildings onto my bitmap that are, say, 64\*64 of size. As you know, I am using a 16\*16 block map. Now, if the building is in the border of the screen, say, you can only see one half of it, the shape is too big and I get a "blitting out of bitmap"(or something like that) error... One method to get around that is to have a quite large bitmap, in fact, larger than the screen.

But that=B4s a waste of memory, and does not work in my program because of some technical reasons.

The second method I thought of is to split that big shapes into small 16\*16 ones, but then I have thousands of shapes, and that doesn=B4t work too.

The solution that I want is a blit command that automatically skips those pixels that are not on the bitmap, and thus creating no errors. Does anyone know how to code some assembler statement for this special blit command?

As you probably know, any good help will be mentioned in the thanks-to list.

Yours,

Lukas Hartmann (MinuteMan2606)

## 1.279 Bitplane Bitmap

From: Daniel Allsopp <dallsopp@enterprise.net>

Date: Fri, 20 Feb 1998 15:35:57 +0000

Subject: Bitplane Bitmap

Hi,

As usual, I've found this command in the Blitz Manual but as everyone know's it's about as useful as a chocolate fireguard.

I'm using a 128 colour palette in my game. When I've got the palette correct which I'll be using then I'm going to change it to 256 colours, with the latter 128 colours half the brightness of the first 128 colours so I can create shadow effects.

I know that I've got to draw the shadow in one (unused colour) colour and then when the shape is blitted onto the bitmap, the shadow will be drawn where the crappy unused colour was, but using the last 128 colours to draw what was on the background before it was blitted.

Can anyone tell me how to achieve this effect??

--

Cheers,

- Daniel (dallsopp@enterprise.net)

Subject: Re: Bitplane Bitmap

Hi Daniel,

> I know that I've got to draw the shadow in one (unused colour) colour and then

> when the shape is blitted onto the bitmap, the shadow will be drawn where the

> crappy unused colour was, but using the last 128 colours to draw what was on

> the background before it was blitted.

> Can anyone tell me how to achieve this effect??

Imagine your first bitmap is bitmap 0. You need to make another bitmap that points to the last plane only. If this bitmap is bitmap 1 then it'll work like this:-

```
BitPlanesBitmap 0,1,%10000000
```

Now if I havn't got my binary mixed up you'll now have two blitz bitmaps.

---

Bitmap 0 is 8 planes and bitmap 1 is 1 plane. The magic thing about bitmap 1 is it shares the same memory as the final plane of bitmap 0.

Now all you need are some 1 plane shapes to blit to bitmap 1 to create some shadows. It's as simple as that! Any drawing to bitmap 1 will also create shadow effect which allows you to use Box, Plot, Line etc..

Cheers,

Paul

Date: Tue, 24 Feb 1998 13:54:21 +0100

Subject: Re: binaries in Blitz-code?

oN 23-Feb-98 yOU, Frank Otto, wROTE:

>Blitz says "token not found". I also have no experience with the command=

s

that

~~~~

>create an error message.

>\*bmap.bitmap=3DAddr BitMap(0) ; adress of BitMap (The Type not found er=

ror)

~~~~

Does it say \*token\* or \*type\* ? If it is \*type\* , and I think that it

is, I think you=B4ll have to include amigalibs.res.

Do this by writing blitzlibs:amigalibs.res into the residents(?) field in=

the "Compile Options" window.

The error probably occured because the .bitmap type isn=B4t defined in yo=

ur

program, but in the amigalibs.res file.

Hope I could help you,

## 1.284 Audio Problem

From: "Andrew" <mramiga@paparazzo.u-net.com>

Date: 21 Feb 98 11:36:51 +0000

Subject: Audio Problem

1) I've just join this mailing list. (Should of done it ages go,  
never the less I have joined now)

2) The problem

AudioLib is rubbish and to prove it use say Play16 (I'm using 1.6

04.02.96) and go and play a long sample. Then execute this

program

--

End

Filter Off

--

Yes that right End at the begging it isn't a typo. You will hear what I mean. Then run it but remark Filter Off - ;Filter Off problem fixed . The same problem will happen with most of the commands in AuidoLib. It's rather annoying.

So I tried the only other route I know off accessing Audio.device but the Blitz Audio.bb2 include is buggy. All I get is Garbage at End of File. What use is that to me?

I know that Filter Off is Move #253,\$bfe001 and Filter On is Move #2,\$bfe001.

What I want to know is how test to see if audio channels are open, allocate the channels, deallocate the channels, make a bank to store a sound, and play that sound that is in that bank. All should be as O/S friendly as pos. (I know that I'm asking lot for a newbe, but that's the newbe way!)

And is there an lib for AHI in Blitz yet?

## 1.287 Ascii code

From: "Oliver Marks" <oly@enterprise.net>

Date: 22 Feb 98 11:41:54 -0500

Subject: Ascii code

Below is the code which i am using to load in the text file  
if you know of a better way could you please tell me as i am  
quite new to blitz and do not understand the filerequestors  
that well.

```
.filerequester
```

```
MaxLen fi$=192
```

```
MaxLen pa$=192
```

```
filename$=ASLFileRequest$("Select Html Filename",fi$,pa$,"#?.txt",0,0,100,100)
```

```
count=0
```

```
test=ReadFile(0,filename$)
```

```
If test=True
```

```
FileInput 0
```

```
While NOT Eof(0)
```

```
html$=html$+Inkey$(1)
```

```
count=count+1
```

```
Wend
```

```
EndIf
```

## 1.288 Re: Ascii code

From: Paul Burkey <burkey@bigfoot.com>

Date: Sun, 22 Feb 1998 17:08:39 +0100

Subject: Re: Ascii code

Hi Oliver,

> Below is the code which i am using to load in the text file  
> if you know of a better way could you please tell me as i am  
> quite new to blitz and do not understand the filerequestors  
> that well.

```
> MaxLen fi$=192
```

```
> MaxLen pa$=192
```

```
> filename$=ASLFileRequest$("Select Html  
Filename",fi$,pa$,"#?.txt",0,0,100,100)
```

```
> count=0
```

```
> test=ReadFile(0,filename$)
```

---

> If test=True

Combine the last two lines to make:-

```
If ReadFile(0,filename$)
```

It's only a small thing but it reduced the amount of variables you're using which is always a good thing.

```
> FileInput 0
```

```
> While NOT Eof(0)
```

```
> html$=html$+Inkey$(1)
```

And I think that should be Edit\$(800) instead of Inkey\$(1). The Edit\$( ) function reads a line of text up to an 'End of Line'. The 800 is used as a realistic maximum. Rarely will you get text files with lines longer than 800 but the value you use is up to you!

I'm not sure about how safe it is to read a whole file into a string as you're doing here. Does anyone know if Blitz has a string length limit? If not then this is fine.

Cheers,

Paul

```

Depends on how you want to display it.

Repeatedly using Edit\$ will read the file a line at a time.

Repeating Nprint would display the file as a scrolling load of text in a CLI window

Urgh!

---

Alternatively, set up a GTlistview, fill it with the text (using edit\$) & then let people scroll that up & down. You might need to fiddle if you're planning on reading huge text files (anyone know the limits of this arrangement in terms of text lines/kB?).

There's a blitz manual (?) example somewhere that creates a text reader that uses a bitmap to hold the text, so I guess that that's an option too.

Yep, unfortunately there isn't a "SelectAll" command either so you have no way of selecting the text in order to paste it into the other

document.

> It's a shame SuperTed doesn't have, at least, one of these features.

Sure is.

> I've tried to contact RWE a while ago about their folding procedures, but they

> The above will freze the program using hardly any cpu time until a  
> IDCMP message arrives to your program, such as the appicon being  
> clicked on.

This won't work as the AppEvent cannot be detected using WaitEvent, unless you are able to add an event to be detected, which is not IDCMP. There is an example in the docs for the library (RIAppLib I think).

One method to reduce CPU usage is to increase the delay. This will give a slower response to the icon/menu, but will not really be noticable. Instead of "VWait" put "Delay\_ 5".

Another alternative is to use OS functions to pause program flow. If you have the address of the port that does the Appxxx stuff then you could have something like this.

; Set up app stuff as usual

WaitPort\_ \*AppPort

; Done!!

Check the syntax for this command. The program should now wait for an event at that message port.

Farewell, for now,

.oO David McMinn Oo.

 > AppEvent?????

This may be helpful. I've not actually use application icons yet so  
 not sure how they do event stuff. Try this anyway. COMmands syntax  
 may not be correct (sorry!).

Repeat

ev.l=WaitEvent

Until ev=AppEvent

The above will freze the program using hardly any cpu time until a  
 IDCMP message arrives to your program, such as the appicon being  
 clicked on.

Maybe somebody else can offer better?

Cheerio,

Mike.

From: "Wright J.A" <J.A.Wright@rhbnc.ac.uk>

Subject: AppEvent.....

Date: Wed, 18 Feb 1998 14:23:05 -0000

Hello ppl,

ok, i'm writing an app, which can be iconfied, or menufied. When  
 iconfied, it goes into the followong loop:

Repeat

VWait

---

Until AppEvent

I had to put in the VWait because otherwise, my app used nearly 100% CPU time.... however even with the VWait it uses about 50% CPU time on slower CPU's. Is there any way to get this CPU usage down to a minimum, while the app is iconfied not doing anything, just waiting for an AppEvent?????

thanks,

Darklight

> it.

Yes thats what I'm doing:

J=0 ; J= the joystick port to read from

If Joyb(J)=1

If Joyr(J)=2 them DoMove=1

If Joyr(J)=8 them DoMove=2

else

end if

Please keep in mind that I used blitz mode for this and if someone can get it

---

to work in Amiga mode then that doesn't help me as the code might be different.

Also I had an error handler but this is not displayed, all that happens is a crash.

Thanks again

Dave

## 1.299 An 030

(Post.Office MTA v3.1.2 release (PO203-101c)

for <blitz-list@netsoc.ucd.ie>; Mon, 9 Feb 1998 23:08:07 +0000

Date: Mon, 09 Feb 1998 23:08:11 +0000

From: Dave <d.boaz@virgin.net>

Subject: An 030

Hi

Resently I sent someone a program that worked find on my 020 + 4Mb . But he says when he presses fire button it crashes on his 030 amiga.

Does anyone have any idea why this happens.

The code simply checks fire button using joyr() and then calls a gosub which only alters the value of a variable , this variable holds the value of the shape to blit.

I am thinking there must be a problem with the joystick checking because there is nothing else in the code apart from a Gosub and the altering of a variable.

Has anyone with a 030 had problems with Joystick checking commands, I used Joyr

Thanks for any help

Subject: also... MOD probs?

Date: Mon, 9 Feb 1998 14:32:10 -0000

hello again,

another problem I have had is that ever since I put in an 030 board, blitz (2.15) hasn't been playing MODs properly: it keeps missing out notes. MedMODS work fine, but they're not as easy to put in as MODS.

Does anyone know why they've stopped working, and is there a fix?

### 1.302 AllocMem() patching

From: BootBlock of Carnage <j.cox2@ukonline.co.uk>

Date: Wed, 04 Feb 1998 23:13:51 GMT0

Subject: AllocMem() patching

Can someone tell me how to "patch" AllocMem() so whenever a program tries to allocate some memory, the "patch" code will instead allocate the memory and totally bypass the actual AllocMem() routine?

The reason for this is, is because I want to code a VMM type of program that DOESN'T require an MMU.

Hah, I was nearly there! Thanks very much for that.

I'm already using the 3rd party commands to get that far, so  
really I shouldn't have said "telnet" so much as connection or  
session or something, I'm not using an actual external client.

Thanks again then,

regards,

Evan Tuer.

> But do you have to log in in some simple way first? I can't  
> seem to get any response on port 80 to various GET commands.  
>  
> Thanks!

I wrote a web-browsing assistant CGI script last year, I did it in C++ on a UNIX system, so was able to use sockets and such to obtain a connection to the web server. You can get a similar effect by telnetting to port 80 on a web server as follows:

```
telnet www.servername.com 80
```

Once there, type

```
GET <document name> HTML/1.0
```

followed by two new lines (carriage returns)

You may not see the characters you type echoed back to you... don't worry, it should still work! I think however that telnet connection isn't very useful to a program, I tried that approach originally and couldn't find a way to get data from the telnet process. If you are using Blitz there is a set of TCP/IP commands available from a third party. Someone on this list should be able to help?

> program into it properly.

It sounds like you've changed your DefLibs file and forgot to include the library that contains the 'Request' command. I think you'll find 'Request' in the 'ElmoreSysLib' so all you have to do is make your deflibs again including that lib and the ?????? will become tokenized again.

What are you using to make your deflibs? I use 'Library Manager' which is a nice way to maintain my libs. The "About" requestor says it's freeware so if you want me to end it let me know! I think it comes with Blitz anyway so you may have or even use it.

Cheers,

Paul

Subject: \*sigh\*

P

Many hours have I spent arguing against PC owners, about how crap their machines are, and how shite Windows is... Yet I have just ordered a P266, which should arrive in about a week or so.

Still, I'm not giving up on my Amiga. I'm linking them up with a Parallel cable, and get some software so I can copy files across.

What I was going to ask is... those of you who have/use PCs, what's the best type of language to use on the PC? If I can get some names, then I can ask at school if they can get it, and then I'll nick the CD :)

Any info would be appreciated, because I would like to program on the PC as well as the Amiga!

cya!

the best and only is C .. but beware with Microsoft C you can only program for Win95/Win NT .. not own runnable programs (under Dos or OS/2 or whatsoever).. if you really want to program, get yourself a copy of LINUX it is the best OS for the PeCe ! .. and with it you get a complete C package ... everyone on the pece programm in c !... but if you get yourself a copy of linux then you have one more advantage, Linux also runs on normal Amigas and on Powerup (PPC) Amigas !! so you can use the

---

software on bnoth machines !

 Hi All!  
 First of all, hello to everybody - I am new to the list.  
 Here cums my question:  
 I am coding a realtime C&C clone in Blitz2, and thus I need  
 a fast GFX engine... One thing that slows it down is that  
 I need to Blockscroll a 640\*256 area in 256 cols... :)  
 Blockscroll is a bit slow and Copybitmap is doesnt fit  
 to this usage... Does anyone know of a fast block-copy  
 routine(between two bitmaps) in asm that I can include  
 as a statement??  
 If I get a good help, I=B4ll include u in the thanks-to  
 list... :)

I don't have time at the mo' to write an example, but if you have the  
Amiga Dev CD, that has some examples in  
'Amiga\_Dev\_CD\_V1.1:Extras\Development\RKM\_Companion2.04\Exec\_library\mes  
sageio\'. (or something like that).

Ciao,
