```

1.3 installation

- Laplace Manual -- Installation -

2.2) Installation

   Laplace offers an installation script. Usually there should be no problem,
just enter the destination directory and everything will be copied to this
place. Usually it is not necessary to use Expert mode, because all files are
copied to this directory and there is no danger of overwriting any files that
are not related to Laplace. The script will also create backups of your
Projects and Include files, so there is no danger of loosing these.

   The assign Laplace: is obsolete, please remove it, if it is somewhere in
your user-startup. Laplace might get confused by it!
