

This is the 2.4 release of EEDRAW, an electrical/electronic diagramming tool for the IBM PC, A major change from the 2.2 release is the inclusion of drawing layers, hence letting the user add far more data to there diagram's. Included in the package are the new libraries, and a conversion utility to upgrade drawings created on version 2.2 of EEDRAW. Also there is a simple tool to aid in handling the library files.
