

Diagram 1.1

Information Graphics

Diagram! is a smart, general purpose graphics tool, designed for business graphics and technical drawing. Diagram! features user customized symbol libraries, automatically redrawn rubberbanding lines, along with many more traditional drawing tool features

Diagram's simple point-and-click interface makes drawing a snap. Just drag out any of a variety of standard or customized symbols from symbol palettes and drop them into your document.

Diagram! supports hierarchical diagrams, in addition to links between diagram objects and files created by other applications. And, of course, images generated in Diagram! can be easily copied and pasted to other applications.

User-extensible palettes of graphic objects allow users to create graphics simply by dragging objects off palettes and into their documents. Users can rapidly create graphics without having to switch between modes or select new tools. Since palettes are user extensible, frequently-used figures can be re-used, eliminating repetitive drawing and formatting typically necessary with conventional illustration programs.

Smart rubberbanding lines and labels between graphic objects automatically update as you rearrange objects in your Diagram! documents. This means that Diagram! understands relationships, freeing users to modify their documents without having to mechanically update line positions, labels, and other connecting components. Diagram! is geared for the business professional rather than the artist.

Diagram! can effectively integrate a variety of files and applications into a single document. Users can use documents from other applications by dropping them into

Diagram!. Linked documents can be updated without the user having to make changes to the Diagram! document.

CASE Applications

Diagram! is the perfect tool for developers seeking to draw initial plans and requirements through the use of traditional visual CASE methodologies such as data flow diagrams and Entity-Relationship diagrams. Diagram! also speeds common documentation tasks such as adding descriptive call-out text to screen shots or interface mock-ups.

Federal

For customers in the Federal Government, Lighthouse has created Diagram! Federal. Integrated into Diagram! Federal is a extensive collection of image palettes which have been designed to meet the unique needs of end users in the U.S. Government. Images include, maps, seals, and a variety of other graphics.
