

Fill submenu

Sheet -> Fill

The Fill submenu has six commands:

Fill Down copies the values from a selected cell or row down into one or more highlighted cells or rows.

Fill Right copies the values from a selected cell or column to the right into one or more highlighted cells or columns.

Fill with Cell copies the contents of the selected cell into all the cells in the range.

Fill Smart evaluates the contents of the selected cell before taking any action. If the selected cell contains a value (numeric or string) all highlighted cells are filled with =NEXT(cell), where cell refers to the cell immediately above or to the right. However, if the selected cell contains a formula, all highlighted cells are filled with =SAME(cell), thus accomplishing a run-time copy/paste of the formula. This command can be invoked by pressing Shift-**RETURN**.

Fill Smart Down performs a SmartFill except that it bases the cells in each column of the range on the cell at the top of the column.

Fill Smart Right performs a SmartFill except that it bases the cells in each row of the range on the cell in the first column of the row.
