

# Recalculate

## Sheet -> Recalculate

After you have made changes to your worksheet, use this command to recalculate the entire worksheet. If you have more than one worksheet open at the same time, Recalculate will only affect the currently active worksheet. Note that **Format -> Sheet Inspector** displays an inspector panel that allows you to turn Auto Recalc on or off. See [Sheet Inspector globalFormat](#).

The Recalculate command is effective only if Auto Recalc is turned off on the Sheet Inspector Panel.

See [Recalc Range recalcRange](#).

Parent Menu [Sheet](#).
