Fill Smart
Sheet -> Fill -> Fill Smart

Fill Smart evaluates the contents of the selected cell before taking any action. If the selected cell contains a value (numeric or string) all highlighted cells are filled with =NEXT(cell), where cell refers to the cell immediately above or to the right. However, if the selected cell contains a formula, all highlighted cells are filled with =SAME(cell), thus accomplishing a run-time copy/paste of the formula.

See "NEXT(value[,inc])" and "SAME(adr)" SpecialFunctions¬.

This command can be invoked by pressing **Shift-Return**.
