

Choose Signal

The signal can be chosen by clicking on the buttons which say "Choose..." for either h or x.

A signal inspector panel opens up for that signal. You can then choose any one of the following functions: Sinusoidal, Window, Exponential, Triangle, Impulse or Delta, or Sinc.

The parameters can be varied either by using the slider, or by entering the value in the textfield (press return for each parameter in this case).

The signal specified is then displayed in the inspector panel.

Once you have chosen a signal and like the way it is displayed, click the "OK" button in the inspector panel.
