ExpressOCR™

_____

Optical Character Regonition Application

ExpressOCR_SG-Half.tiff ¬

Express OCR uses the OCR technology which underlies several of Caere Corporation's retail products. It is comprised of an OCR technology made up of two components ...(1) the AnyFont° OCR Engine, which recognizes document images at 300 dpi and above, and (2) the AnyFax° OCR Engine, a neural net technology, which recognizes images below 300 dpi (i,.e. typical fax documents are transmitted at 200 X 200 dpi or 200 X 100 dpi). By utilizing the AnyFont/AnyFax Engines in our API, the integrator can fully insert Caere's OCR technology directly into their own NEXTSTEP° Application.

Also included   is fully integrated spell checking for English and eleven (11) Western European languages, plus we have recently integrated Caere's proprietary AnyPage° dynamic auto-threshholding technology which works with gray or colored image backgrounds, and their proprietary Supercompression technique which reduces text-images 5-8 times beyond traditional compression algorithms.   Available as a FAT binary Application,   an API   and can be embedded in PaperSight°

Features:

·   ExpressOCR uses the latest OCR technology from the Award winning Caere Corporation OCR which has won many awards in the Windows and Macintosh Environments.

·   ExpressOCR recognizes character sets of 11 European Languages making it a truly international product.

·   ExpressOCR gives the user much better control of his/her available options in input and output control than any competitor.   For example,   output can be put directly into

the Paste buffer to eliminate key strokes in depositing into your word processor of choice.

· ExpressOCR uses a built in dictionary as a spell checker to ensure the highest degree of accuracy.

· ExpressOCR is available in three flavors.
  a. An Application which runs as a Service.
  b. A programmer's API which can be used by other developers.
  c. The OCR can be embedded in PaperSight to give a high quality image management and document control product which allows autoindexing of scanned documents.
