To the Teacher

Glencoe's *Presentation Plus!* is an exciting multimedia teacher tool that enables you to present dynamic lessons for every unit and chapter of *The American Republic Since 1877* text. Many of the teaching resources you have come to rely on—including full-color transparencies, *Vocabulary PuzzleMaker*, *Interactive Tutor Self-Assessment*, and more—are now at your fingertips in this easy-to-use product. Using *Presentation Plus!* and a Web browser, you also get instant access to online activities and resources at the tarvol2.glencoe.com Web site.

NOTE: The *Presentation Plus!* system is based on Microsoft PowerPoint 97 (Windows), but you do not need the PowerPoint 97 (Windows) software to use this tool since a Viewer program is included with the slide shows. If you do have access to PowerPoint 97 (or a later version), you can customize your presentations.

Site License Agreement: By installing this software, you accept the terms and conditions of the McGraw-Hill Companies End User Software License Agreement. A copy of this agreement can be found on our Web site at www.epgtech.com, or on the CD-ROM under the filename LICENSE.TXT. This can also be attained by contacting our Software Support Hotline at 1-800-537-3715.

Features of *Presentation Plus!*

Each slide show includes the following features:

– View an extensive collection of regional and special-purpose maps.

– Connect to a presentation that showcases all of the United States Presidents.

– Connect to *The American Republic Since 1877* Web site for additional activities and teaching suggestions.

– Access current state profiles as needed in your instruction.

Unit Slide Shows

In addition to the features above, the unit slide shows may include the following features:

– Take a look at relevant literature selections and how they pertain to American History.

– All Cause and Effect transparencies are included in *Presentation Plus!*

– Delve into the link between geography and history.

– Step back with Time Notebook and see what people's lives were like in the time periods being studied.

Chapter Slide Shows

Chapter slide shows may also include the following features:

– Increase your students' knowledge of technology with these activities.

– Give your students the opportunity to increase their understanding of social studies.

– Guide your students through activities to improve their critical thinking skills.

– Work through these activities to help your students excel at studying and writing.

– All Why it Matters transparencies are included in *Presentation Plus!*

– Incorporate Glencoe's *PuzzlePlayer* software into your lesson plans.

– All Daily Focus Skills transparencies are included in *Presentation Plus!*

– Examine the causes and effects of important events in history.

– Add information to your lessons to build relevance and add interest.

– Did historic events really happen the way you think they did? Utilize this feature to help your students find out.

– Connect lessons in history to other academic disciplines.

– Hear about an interesting moment in history from *National Geographic*.

– Use Glencoe's *Interactive Tutor Self-Assessment* software to quiz your students.

– Integrate the You Don't Say feature into your lesson.

– Connect lessons in history with technology of that time period.

– Integrate *The American Republic Since 1877* videos where they are relevant throughout *Presentation Plus!*

Installation Instructions

Windows 95/98/Me/2000 Installation Instructions

1. Insert the disc into the CD-ROM drive. If you have autorun turned on, the installer will run automatically. In this case, skip to step 4.
2. If autorun is turned off and the installer did not run automatically, click on the **Start** button and choose the **Run** option.
3. Type the appropriate drive letter that corresponds with your CD-ROM drive. For example, **d:\setup\setup** and press **Enter**.
4. Follow the directions on the screen to complete the process.
5. After completing the installation, check to make sure that your monitor is set to high-color mode (thousands of colors) at 800 x 600 or higher resolution.
 - With your mouse, right click on the Desktop.
 - Choose the **Properties** option.
 - Click on the **Settings** tab in the Display Properties dialog box.
 - Check the *Color palette* and *Desktop area* settings.
 - Change the settings if required.
 - Apply the new settings if you made any changes.

PowerPoint Viewer 97 Installation Instructions

If you do not have PowerPoint 97 (or a later version) installed on your computer, install the Viewer 97 software provided on the *Presentation Plus!* CD-ROM.

1. Click the **Start** menu button and choose the **Run** option again.
2. Type “**d:\Media Installers\PPView97**” (include the quotes) and press **Enter**. (Remember to use the appropriate drive letter that corresponds with your CD-ROM drive.)
3. Follow the instructions on the screen to complete the installation process.

(NOTE: You must install the PowerPoint Viewer onto your hard drive. Network installation is not supported.)

Running *Presentation Plus!*

Setting Up your Equipment

Before you begin using the *Presentation Plus!* system, check your equipment connections. To use *Presentation Plus!*, you will need a computer (see System Requirements on page 9) and a projector or large-screen monitor capable of displaying high-color (800 x 600 or higher) images.

PowerPoint 97 (or a later version) Start-Up Instructions

If you have PowerPoint 97 (or a later version), you can use it instead of the Viewer to display the presentations.

(NOTE: Verify that your version of PowerPoint 97 is at least the SR-1 release by choosing About Microsoft PowerPoint in the Help menu of the program after it opens. If your copy is not SR-1, or later, download and install a free update from www.microsoft.com)

1. Start the PowerPoint software. Follow the instructions that came with the program.
2. Choose to open a presentation.
3. Select your CD-ROM drive.
4. Choose a presentation (e.g., TAR2 Unit 06, TAR2 Chapter 20).
5. Select the *Slide Show* option to begin the presentation.

6. When you start a presentation, you will see an opening slide. Click the **Forward** button to proceed to the next slide.
7. From the **Contents** (or Main menu) slide, you can access many of the *Presentation Plus!* resources. While viewing a presentation, click the navigation buttons to view the slides. Click the **Help** button for step-by-step instructions.
8. To end the presentation, click the **Exit** button or press the **Esc** (escape) key.

PowerPoint Viewer 97 Start-Up Instructions

If you do not have PowerPoint 97 (or a later version) installed on your computer, follow the instructions to run the Viewer program. If you have not installed the Viewer, refer to the installation instructions on page 7.

1. Make sure that your monitor is set to high-color mode (thousands of colors) at 800 x 600 or higher resolution. If your screen is not set properly, right click on the Desktop, choose *Properties*, and change the monitor settings.
2. Click the **Start** menu button and choose the *Programs* option.
3. Select **Microsoft PowerPoint Viewer 97** to start the Viewer program.
4. Click the **Look in:** pop-up menu and select your CD-ROM drive.

5. Choose a presentation (e.g., TAR2 Unit 06, TAR2 Chapter 20).
6. When you start a presentation, you will see an opening slide. Click the **Forward** button to proceed to the next slide.
7. From the **Contents** (or Main menu) slide, you can access many of the *Presentation Plus!* resources. While viewing a presentation, click the navigation buttons to view the slides. Click the **Help** button for step-by-step instructions.
8. To end the presentation, click the **Exit** button or press the **Esc** (escape) key.

System Requirements

- IBM PC (or 100%-compatible) computer
- Pentium 90 MHz microprocessor (or higher)
- Windows 95 (or later)
- 4x CD-ROM (or faster)
- 16 MB memory (32 or more MB recommended)
- color monitor or projection device with high color (800 x 600 or higher) resolution
- video card (1 MB memory or better)
- hard drive (20 MB free)
- mouse or similar pointing device
- 28.8 modem (or faster) (optional, but needed to utilize some features)
- printer (optional, but recommended)

Navigating the Software

Using the *Presentation Plus!* system is easy. Once you select a presentation, just use a mouse or another compatible pointing device to step through a slide show. As you view a slide show, you can use the following buttons/keys to navigate a presentation.

Use the **Forward** button to move forward one slide at a time through the software.

Click the **Back** button to move back to the previous slide.

Click the **Home** button to display the **Contents** (or Main menu) slide.

To go to the beginning of a section or part, click the **Section Start** button. Depending on where you are working in a presentation, click this button to return to the slide from which you accessed a particular option.

Click the **Exit** button or press the **Esc** (escape) key to end a slide show.

Use the **Speaker** button to listen to the audio provided in the presentations.

Click the **Speaker Off** button to turn any audio off.

Click the **Help** button to access step-by-step instructions on using *Presentation Plus!*

Click the **Map/Chart** button to access maps and charts that pertain to the Lecture Notes you are viewing.

Click the **Map/Chart/Photograph** button to access maps, charts, and photographs that pertain to the assessment question you are viewing.

Press the **Space Bar** to display the next item on a slide. If the last item is already displayed, the program will display the next slide.

Use the **Backspace** key to move to a previous item on a slide. If no items appear on a slide, the program will go to the previous slide.

The presentations also include **hyperlinks**. A **hyperlink** to another slide or to a different part of a presentation appears as yellow, underlined text. When you click on a **hyperlink**, the program takes you immediately to the location associated with the link. If you accidentally select a hyperlink, you can click the appropriate navigation button to return to where you were.

Teaching Tips

Presentation Plus! combines many of the teaching tools you are already familiar with in one complete package. Listed below are a few teaching suggestions that may be helpful for presenting *Presentation Plus!*, especially if you have never used a PowerPoint presentation before now.

- Check your equipment setup before class begins. Configure your computer system and projector so that they work properly with each other. If you have a videodisc player, make sure that it is working properly too.
- Install the *Presentation Plus!* software. Follow the instructions for installation provided in this user guide.
- Work through at least one unit and one chapter presentation. Check out all of the features. Once you familiarize yourself with the flow and operation of one presentation, you will be ready to work with all of the others since they follow the same organization and navigation.
- Preview the presentations before using them in the classroom. Use the teaching suggestions in the **Teacher Wraparound Edition** to help you develop a plan to integrate the presentation into your lesson plan.
- If you have Microsoft PowerPoint 97 (or a later version), you can print the slides to use as handouts or as a teaching reference. Open a presentation and choose **Print** from the **File** menu. Using the Print What pop-up menu, you can choose to print 2, 3, or 6 slides per page. This will save time and paper when printing the slides. All slides have been set up to print in **black and white** so that the text shows. To print only selected slides, click on the **Slides** radio button and then enter the desired print range (e.g., 5-12).
- Refer to the **Teacher Wraparound Edition** and the print components that accompany the other integrated software components for teaching suggestions.
- Discuss proper note-taking techniques with your students. Explain how to record important words, ideas, and phrases. The lecture notes that are provided as part of *Presentation Plus!* are not designed to be copied word for word.
- If you have Microsoft PowerPoint 97 (or a later version), you can customize any of the slide presentations to meet your classroom needs. You can edit slides, add new ones, and delete unneeded slides. See page 12 for more information.

Customizing a Presentation

The *Presentation Plus!* software was created using Microsoft PowerPoint 97. Although you do not need PowerPoint 97 to view the slides, you can customize any of the presentations if you have PowerPoint 97 (or a later version). Follow the steps listed below to customize a presentation.

To customize a presentation:

1. Install PowerPoint 97 (or a later version) on your computer if it is not already installed.

IMPORTANT: If you are not thoroughly familiar with PowerPoint, practice creating your own presentations. You could also work through a tutorial to learn how to use the powerful features available in this program.

2. Before you make any changes to a PowerPoint presentation, you should create a folder on your hard drive.
3. Since you cannot make changes to the presentations on the CD-ROM, copy the presentation(s) to your hard drive. Copy them to the folder you have created. Relevant video and linked presentations will need to be copied into the folder as well. If you have enough hard disk space, you can copy all of the presentations and video to your hard drive. Approximately 650 MB disk drive space is needed. Each presentation includes all of the art, audio, and links in its own file.

4. Since you copied the files from a CD-ROM, they are set to read-only. If you change a slide show, you must save it under a different name; you can also use Microsoft Windows Explorer to change the properties for these files. Right-click on a file name that you copied to your hard drive, choose **Properties**, and then turn off the read-only attribute.
5. Customize the presentation to meet your classroom needs. Refer to the suggestions and tips listed below before you make any changes to a presentation.
 - If you have deleted any art element (e.g., a button or a picture) from a presentation, you will need to copy the element from another presentation or slide within the current presentation if you want to insert the element back into a slide show. Separate art elements are not provided as part of *Presentation Plus!*
 - All of the chapter and unit presentations use the **custom show** feature for all features accessed through buttons on the left side of the slides. You should fully understand how custom shows function before making any modifications to these slides. If, for example, you add a slide to a feature, you must also update the corresponding **custom show list** so that PowerPoint will know how to display the new slide.

- Changes to the **Chapter Introduction, Lecture Notes, and Chapter Assessment** slides can easily be made since these slides are not part of a custom show. You can add slides, delete slides, and update slides as needed.
- Hyperlinks and action settings are used to control the action for many of the buttons found in a presentation. Making changes to a hyperlink action setting is relatively straightforward. However, a special launcher program (**fscstart.exe**) controls how the **Puzzles, Interactive Tutor Self-Assessment Software (ITSA), Help, and the Internet Connect** buttons operate. If you change any of these buttons or add new buttons, you need to understand the syntax for the launcher program. To use the launcher program, choose to assign an action setting to an object. Indicate that you want to add a setting that runs a program. Enter the launcher program name along with the appropriate switch to perform the desired action.

To start the puzzle software, use... **fscstart /ar2 /1 /fsc**

To start ITSA, ... **fscstart /ar2 /2 /fsc.[unit#].[chapter#].[section#]**

To display the help information, ... **fscstart /ar2 /3 101**

To launch tarvol2.glencoe.com, ... **fscstart /ar2 /5 /111**

** Place the correct numeric value in place of the brackets and information contained within them.

Troubleshooting Tips

Glencoe provides toll-free telephone assistance for teachers who experience difficulty while using our software or templates. Before calling for assistance, please check the following:

- Is your computer working properly? On the same computer, try some other software that you know is working.
- Can you repeat the problem?
- Does the problem occur at the same point each time?
- Review the list of **troubleshooting tips** below to see if your problem is identified.

In order for the Support Center to help you as quickly as possible, have the following information at hand when you call for assistance:

- exact title and ISBN number of the software from the disk label or package
- brand, model, and configuration of the computer and printer you are using
- version of the operating system installed on your computer

The Glencoe Support Center toll-free number is **1-800-437-3715**. The Support Center is available from 8:00 a.m. to 6:00 p.m. Eastern Time. You can also contact the Support Center on the Internet at the following e-mail address: **epgtech@mcgraw-hill.com**

Using the Help System

In addition to the Glencoe Support Center, an extensive **Help** system is incorporated into *Presentation Plus!* Whenever you need help, just click the **Help** button to display step-by-step instructions.

If the appropriate topic does not appear, click on the Contents button to see the table of contents for the Help system. Or, click on the Search button to find a particular topic.

Troubleshooting Tips

The presentation is difficult to read when displayed on a screen.

The quality of the images projected through PowerPoint depends on several factors. Make sure that you are displaying the image onto a reflective surface—not a blackboard or other similar surface. Using a better screen can greatly improve the display quality. Darken the room if possible. Check the quality of your projector. This, too, greatly impacts the display quality.

The navigation buttons do not seem to work properly.

Click the **Exit** button or press the **Esc** (escape) key to exit the slide show. If you are using the Viewer, choose the presentation again to start the slide show at the beginning. If you are

using PowerPoint 97, press the **Home** key to scroll to the first slide in the presentation and then choose **Slide Show** in the **View** menu to start the presentation at the beginning.

Clicking Exit in an ancillary presentation does not go back to the original presentation.

Your version of PowerPoint 97 is not the latest version. Use the PowerPoint Viewer that is included on your **Presentation Plus!** CD-ROM to view presentations or download the latest **Microsoft Office 97 Service Release** from <http://officeupdate.microsoft.com>

Clicking the right mouse button does not move backward.

Using the Viewer, click on the **Options** button that appears when you first start the Viewer. Change the settings so that a right-click does not display the pop-up menu. Using PowerPoint 97, click on the **Tools** menu, choose **Options**, and click on the **View** tab. Turn off the setting so that the pop-up menu does not appear on right-clicks.

Colors on the slides do not seem correct.

The **Presentation Plus!** software requires that you set your monitor to high-color (16-bit) or better. If your monitor is set for 256-colors, the quality of the images as they appear on your screen may not be very good. (See the next tip for instructions on how to check or change your color settings.)

How do you set the screen resolution and colors?

Depending on your computer system and projector, you may need to set your monitor to 640 x 480 resolution. Using these instructions, you can also change the color setting. Right-click on the Desktop. From the pop-up menu, choose **Properties**, and then click on the **Settings** tab. Make the necessary changes on the Settings screen.

The highest color setting mode is 256-colors.

For best results, upgrade your video card and driver to support high-color (16-bit) mode or better. If you are using a SuperVGA monitor, you should not have to change your monitor. The various levels of color settings are more a factor of the video card and how much memory it has.

While viewing a presentation, some portions of the screen are not updated.

Ideally you want to display **Presentation Plus!** at 800 x 600 or higher resolution. Some video drivers may have difficulty displaying full-color slides in 800 x 600 (or higher) resolution. An update to your video driver may be available from the equipment vendor. If updating your video driver does not correct the problem, right-click on the Desktop. From the pop-up menu, choose **Properties** and then click on the **Settings** tab. Change the resolution to 640 x 480. You may also have to change your projector equipment to display in the same mode.

The text is not clear on the projected image, but the text is okay on the monitor.

The resolution for a projector needs to match the resolution for your monitor. If your monitor

is set to 800 x 600, for example, text may look squeezed on a projected image. Refer to your projector's manual for instructions on setting the display resolution.

Audio segments do not play.

Make sure that your speakers are turned on and that the volume is set properly. On some versions of Windows 95, there is a small speaker icon in the lower, right corner of your screen. Click on it and then adjust the volume settings if necessary. If the audio files still do not play but other WAV files play correctly on your machine, you may need to install the correct audio CODECs. In Windows, Click **Start, Settings, Control Panels, Add New Hardware**. Click **No** when asked if you want Windows to search for new hardware. **Select Sound, Video, and Game Controllers**, choose **Microsoft Audio Codecs** under manufacturers, and select the **ADPCM Codec**. Follow the directions on the screen and insert the Windows disc if necessary.

When the program displays a new slide, the mouse pointer does not immediately appear.

This is a function of PowerPoint. After a new slide appears, move the mouse a few times to get the pointer to appear. PowerPoint won't show the mouse until you move it so that the pointer does not interfere with your presentation.

Long delays seem to occur randomly while viewing a presentation using Microsoft PowerPoint 97 (or a later version).

If you are using PowerPoint 97 (not the Viewer), you may want to turn off the AutoRecovery/ AutoSave feature. To do this, choose **Options** from the **Tools** menu, select the **Save** tab, and turn off the appropriate option. Since the presentations are quite large, saving the files may require a few moments. If you are viewing a presentation at that time, the slide show will appear not to respond. Even though you are viewing a slide, Microsoft PowerPoint 97 will still autosave any open files according to the set parameters.

A delay may also occur when you click on the **Connect** button. Clicking on this button launches your browser, dials your phone (if necessary), and connects to the textbook's Web site. Depending on the speed of your computer, a few minutes may be required.

PowerPoint has difficulty displaying a presentation stored on a network drive or CD-ROM network server.

Presentation Plus! must be installed locally on each computer that will run the presentations. Check to make sure that all relevant video and linked presentations are in the same directory with the main presentation you are trying to run. There may be noticeable delays running from a network. These delays can be caused by network speed, network traffic, or the server. See your network administrator if you are having difficulties.

Clicking the Connect button does not launch your Web browser.

You must have **Netscape 4.0** or **Explorer 4.0** (or later versions) installed on your computer. When you click on the **Connect** button, a minute or two may be needed for the Web browser

to launch and connect to the Internet. If you don't have enough memory or you experience problems with the connection, the Web browser may not start properly. You can quit the *Presentation Plus!* software and manually launch your Web browser. Then go to the Web site that is specified on the slide.

A memory overflow error appears when printing slides, or only a portion (e.g., half) of a slide prints.

If you try to print a slide that includes large art elements, your printer may display a memory overflow error or the printer may only print a portion of a slide. First, make sure that you are printing in the black and white mode. All of the presentations have been optimized so that only the most important information prints. Background art should be turned off. If you add your own slides, this may not be the case. Choose **Black and White** from the **View** menu. Then right-click on an object and set its black and white format. For example, you can choose not to show an object in black and white mode.

Another option to try is to set the **Print What:** field in the Print dialog box. Choose to print handouts (2 or 3 handouts per page). This option may also alleviate printing problems.

If you want to print slides with all of the art elements, you may need to add more memory to your printer. See the manual that accompanies your printer for more information.

The screen goes black when you attempt to view the show.

PowerPoint 2000 loads the entire presentation into memory when you begin to view the show. This causes a delay of up to a minute or two when you start a presentation.

Answers are not provided for the crossword puzzles.

If you want to print the answers for a puzzle, click on the **Start** button and choose **Run**. Type **d:\extras\puzzles\pzmaker** and press **Enter** to start the **PuzzleMaker** program. (Be sure to use the drive letter that corresponds to your CD-ROM drive.) After the program starts, choose to open a puzzle. Select the puzzle you want and then choose to print it. Exit the program when you are finished.

A slide show does not work properly after making changes to a presentation.

The *Presentation Plus!* slide shows contain many hyperlinks and action settings. Make sure that you did not accidentally delete or change any of these. To check for missing slides, use the **Slide Sorter** view. In this mode, you can view several slides at one time.

All of the chapter and unit presentations use the **custom show** feature for all features accessed through buttons on the left side of the slides (unless they are a linked presentation).

You should fully understand how custom shows function before you make any changes to these slides. If, for example, you add a slide to one of these parts, you must also update the corresponding custom show list so that PowerPoint will know how to display the new slide.

None of the troubleshooting tips solve the problem.

If you have not customized the presentations, call the Glencoe/McGraw-Hill technical support number listed at the beginning of this section.

If you have difficulty customizing a presentation, you may want to access the Microsoft Web site at <http://www.microsoft.com> for assistance with your problem. At this Web site, you can search through an online support database. Another excellent source for help is the Microsoft PowerPoint discussion group at microsoft.public.powerpoint

Notes:
