

VB Print v1.0

VB Print is a tool for the Microsoft Visual Basic development environment that provides customizable printing/documentation of a project. VB Print has unique features such as selectable code highlighting and right justified line wrapping. VB Print also includes project and page headers along with form and icon printing capabilities. Works with both v2 and v3. Cost is \$5. Requires VBRUN300.DLL

Note: VB Print requires the Microsoft Visual Basic v3.0 or v2.0 development system.

To install: Copy VB Print into a separate (new) directory.

For example: `COPY A:*.* C:\VB\VBPRINT`

Note: This is very important because VB Print creates and destroys *.TXT and *.FRX files in its own directory. If you place VB Print in a directory that already has these types of files - they will be deleted!

To create application icons simply drag the VBPRINT.EXE and VBPRINT.HLP from the file manager to the program manager group of choice.

Full operational information including registration is found in the VBPRINT.HLP file.
