_____\/
```
                What does NetShare do?

                UserName

                PassWord

                What is a User?

                What is the SuperVisor?

                Copyright Information

                README If Your Using Floppys

1.2 What does NetShare do?

                NetShare is a multiuser password system for the Amiga. Once you
have used the
                Editor
                 to setup NetShare for your needs, you
will need to run to run the NShare in your Netshare directory then
a window will come up and you then type your
                Username
                 in and then

```
press enter and then type you 5 letter
                  Password
                  .
```

1.3 Editor

```
The editor is for use with NetShare and all you have to do is fill in the
box and the press enter.  If you have made a mistake and you have pressed
enter dont worry when you goto the end run it again and just press enter
until you get to the box you made the mistake on.
```

1.4 Password

```
                  The Password is the five letter/number entry code that you put in  ←
                      after
the
                  Username
                  . If you get it right then you can leave then password
program.  If you get it wrong 3 times the machine will reset.  If you
are a
                  User
                   you may be disabled from some of the available
                  Drives
                  , this
choice would be made by the
                  Supervisor
                  .  The Supervisor will have no drives
disabled because he will be the manager of the computer.
```

1.5 Username

```
                  The UserName is the nine letter/number entry code that you put in  ←
                      before
the
                  Password
                  .
```

1.6 What is a Supervisor

```
                  The Supervisor is the person who is the manager of the system and  ←
                      he/she
is not disabled from any of the
                  Drives
                  .
```

1.7   What is a User

                The User is the a person who uses system and he/she will be   ←
                   disabled
from certain
                Drives
                .

1.8   Drives

The Supervisor would decide which drives the users cannot write to
so none of the files cannot be deleted.

1.9   Copyright

The NetShare Package is Freely-Distributable Software so you cannot
charge anything for it except the cost of a disk.

1.10   If you use floppys

If you use floppys make sure you have the file "PW" in the same directory
as the Netshare program and if you use a sample make it short and small
so the disk can keep up with the diskplay.

                THANK YOU
