

Installation guide

Unpack the program archive and follow on screen instructions.

What is the program about?

This program is an authentic jukebox simulator. So you can make parties where the people could choose their own favorite music!

This version implement much more features. These are some of them:

- **JukeBytes is now freeware!** (For non commercial purposes.)
- Support (.m3u) and (.pls) playlist.
- Support most of the multimedia file formats.
- You can link each playlist with an image file (Yeah! Like a real jukebox)
- You can open/save a playlist group in a new file format (.ctn).
- Automatic full screen mode.
- Password to access the jukebox (Useful when you want to protect your computer at a party)
- Jukebytes miniplayer (With play, pause, stop).
- ...

What do you need to use JukeBytes?

- You must have (.mp3) (.wav) (.au) ... files. All linked at (.m3u) or (.pls) playlists.

- You need image files (.jpg) (.bmp) (.gif) . The program will attach them with the lists. Usually those images are a CD front cover.

If you want that the program link the image file with the playlist file, both files must have the same name, and must be at the same directory:

For example c:\music\queen.pls and c:\music\queen.gif , would be linked.

If you don't have any image file, don't worry. The program will show the playlist name with a blue background.

The user must assume the entire risk of using the program.

Main Window

This is the JukeBytes Loader window. Here you can select playlists exploring your PC (left panels) and add them to JukeBytes (right panel).

You can also open/save your selection using the (.ctn) file format.

BUTTONS

REMOVE: Remove selected playlist from the right panel.

ADD: Add selected playlist from your PC (left panel) to the JukeBytes load (right panel)

RELOAD: Start the jukebox with the selected playlist at the right panel.

Select All/ Deselect All: Check/Uncheck all elements at the current panel.

Collection Menu

OPEN: Open selected .ctn file from disk.

SAVE AS: Save all the playlist selected at the right panel into a (.ctn) file

EXIT: Close JukeBytes

Mode Menu

JUKEBOX SIMULATOR: In this program mode you can enable the password. Also player controls are not available. This mode is the Jukebox simulator, perfect for parties!

PASSWORD: Show the password dialog window.

JUKEBOX + MINIPLAYER: In this program mode you can not enable the password. Miniplayer controls are also available.

PASSWORD WINDOW

Here you can enter a new password or delete it. Also you can enable/disable the password.

The password is designed to protect your computer (for example at a party), because the program can't not be minimized without the previous password check.

Help Menu

CONTENTS: Launch this help file.

ABOUT: Show the About window

Main Window

This is the JukeBox simulator, here you can view up to 2.000 Playlist of 100 Songs each one. As you can see, the functionality is so easy! You only have to select a Playlist and after a song.

Right click over a playlist will fill the "selected songs list" with it. (JukeBox+MiniPlayer only.)

The selected songs list it's limited. The reason is because somebody could introduce a lot of songs, so the other people could not hear their favorite songs. At the disco pub, there was no problem, because each selection had a cost.

So the limit of this program is the size of your hard-disk and your amount of music.

Thank you for use JukeBytes!

Enjoy!
