

Configuration Manager v2.0 (C) 1994 Ad Astra Solutions

If you maintain multiple AUTOEXEC.BAT and CONFIG.SYS configurations, then Configuration Manager might just help you out. The file window displays all of your available Autoexec.* and Config.* configurations. The buttons have the following functions:

Edit: During Manual (file window) selection, brings the selected file into your editor.
 During Preset selection, brings the Autoexec and/or Config selections into your editor.
 Save As: Copies the selected file to a new extension.
 Clear: Clears the Autoexec and Config selections and Description fields.
 Delete: Deletes the selected file.
 About: Registration Information.
 Use: Copies the Autoexec and Config selections over Autoexec.Bat and Config.Sys.
 Exit Win: (Visible after pressing Use) Exits Windows and Reboots your system.
 Close: Exits Configuration Manager (without rebooting).
 Help: These instructions.

Preset Buttons:

Double-click file names or use another Preset button to populate the Autoexec and Config fields. The field to the right of Descriptions is the button label. The field below is a long description of the configuration. After supplying this values, click the Set check-box and then the desired Preset radio-button.

NOTE: After using the Clear button, you must still re-Set the particular button.

Installation

Copy ConfigMgr.exe to any place on your hard disk. Only VBRUN300.DLL needs to be in your path. Follow the regular procedure for adding a new Program Item into any Program Manager group, but set the Working Directory to the location of your configuration files (most likely C:\). This second step is not necessary, but it will save your having to browse for the location each time. You may, of course, run this program directly from the File Manager.

Customization

After the first time you use ConfigMgr, you will find the file ConfigMgr.Ini in your Windows directory. The [Preferences] section contains values you may wish to modify:
