

Installation Instructions for  
EMail Assist for WinCIM  
Copyright © 1994 James N. Hughes

EMail Assist for WinCIM is an add in program for CompuServe Information Manager for Windows. It adds three major features to WinCIM: spell checking, quoting, and user-defined macros, called signatures.

To run EMail Assist, you need a 286 or better, Windows 3.1 or greater, and WinCIM 1.3.

To install EMail Assist, simply run the INSTALL.EXE program. You may run it from the distribution diskette or from a temporary directory into which you have unzipped the files. The important thing is that INSTALL.EXE and INSTALL.DAT must be in the same directory.

After installing, just double-click the EMail Assist icon in Program Manager. Do not run EMail Assist while WinCIM is already running. You will find extensive instructions and information on EMail Assist in the online help file.

If you are unable to install EMail Assist, please contact me at my CIS address, 73777,3273.
