Chapter 1

Fish

1.1 Submissions

How do I submit a program for the Fish Disks or FreshFish CD?

It is quite easy, just follow these directions. We are also interested in
feedback from the programmers.

Why should you consider directly submitting your material?

Free, worldwide distribution, the possibility to get in contact with
thousands of other Amiga Freaks. The possibilities of distribution via Fish
Disks, are enormous.

What are the rules?

Copy your program, with all necessary files, into a drawer on a recently
formatted non-bootable AmigaDOS disk. If possible, arrange so that your
program can be started directly from the disk. If the program requires
specific configuration files, fonts, or other files that might normally be
in some standard system location (S:, FONTS:, DEVS:, etc), first search an
appropriate subdirectory (S, FONTS, DEVS, etc) of the directory from which
the program was started.

Unfortunately we cannot send the disks back. Always send only a _copy_,
never your only copy or a master disk!

Guidelines for submissions:

– All programs must be of the state 'Freely Distributable, FD' and your
  own work. You must hold all copyright on the work. The submission of
  pirate copies of commercial product will be reported to the appropriate
  authorities and you could find yourself in court. Do not try to pass
  off other peoples work as your own!

– Each program must be accompanied by "Product-Info" file. To see how
  to create a Product-Info file, examine existing ones on the Fish Disks
  and look at the Product Infos specifications.

In case you have further questions then please call or write!
