~Changing~execution~order~

1.2 Installation Instructions

INSTALLATION:

Double click the "Install" icon to install WBStartup+ for the first time or to upgrade from a previous version.

The installation script makes 2 directories, "WBStartup (Enabled)" and "WBStartup (Disabled)". "WBStartup (Enabled)" holds all the programs that you want to run at startup, and the other holds all your disabled startup programs (ie, ones that you don't want to run at startup). Everything in your SYS:WBStartup directory is moved to the "WBStartup (Enabled)" directory. The WBStartup+ program is copied to your SYS:WBStartup directory. The WBStartup+Prefs program is copied to your SYS:Prefs directory.

1.3 Author & Tech

About the author
and other tid-bits.

Program: WBStartup+
Version: 2.3
Date: October 3, 1995
Coded by: John Hughes
Email: johughes@heartland.bradley.edu
WWW: <http://rhf.bradley.edu/~jhughes/>
Compiled with: SAS/C 6.55
Machine: A4000 68EC030/25 AmigaDOS 3.1
Required: AmigaDOS 2.0 or above
The preferences program requires AmigaDos 3.0 or above.

~Send~me~a~postcard~
Distribution: WBStartup+ is Postcardware.
As long as all of the archive stays intact and
unmodified, WBStartup+ may be distributed

- o Lets you choose the order in which the startup programs run.
- o Lets you enable and disable the running of each program quickly.
- o Allows you to have access to Workbench while all of your startup programs are being loaded.
- o Can be disabled at startup by holding left shift key down.
- o Progress window shows the icon of the program that is being loaded, and a progress bar with userdefine window background.

1.6 WBStart-Handler Info

WBStartup-Handler

The WBStart-Handler is a handler written by Stefan Becker.

The full archive can be found on Aminet:util/cli/WBStart1_4.lha

1.7 Bugs

Bugs

Thanks go out to all those who reported bugs to me.

I haven't found any bugs yet, however no program is bug free.
Please keep me informed of any bugs that you find.
E-Mail: johughes@heartland.bradley.edu

1.8 Where to get Updates

Locations to find Updates

All WBStartup updates are first posted to Aminet at:

<ftp://ftp.wustl.edu/~aminet/util/boot/WBStartupPlus.lha>

Versions 1.0 to 2.0 were put in /util/wb, sorry for the change.

Updates are also available at my web site:

<http://rhf.bradley.edu/~jhughes/>

1.9 History

History

V1.0 June 26, 1995

First release.

Thanks go to David Swasbrook for showing me an example of how to use `GTLV_Callback`.

V1.1 July 16, 1995

Corrected a "July" to "June" in the docs.

I accidentally asked to money in the "About" menu in the prefs program, all I want is a postcard.

Added MWB icons for the enabled and disabled directories.

Fixed the install script so that no files are deleted, making it much safer.

Minor changes in the documentation.

Added Title node to Prefs program's listview.

You can now change the loading priority of each startup program within the prefs program.

Fixed menus so they are the right colors.

V1.2 July 17, 1995

Bug Fix: You could change the priority of title nodes.

You can now get the WB info requester for any of the programs in the listview gadget of the Prefs program from a pulldown menu.

V1.3 July 18, 1995

Now runs programs without icons. Sorry about that :(

Bug Fix: Forgot to reply to a message in the Prefs program.

Forgot to free up some memory in the Prefs program.

V1.4 July 19, 1995

Prefs program now lists programs without icons, and no longer displays `↳` subdirectories.

V1.5 July 25, 1995

Bug Fix: Font was not being shown if it wasn't already loaded.

WBStartup+ Prefs now uses the screen font for it's text.

Added DELAY as a tooltip for WBStartup+.

WBStartup+ Prefs is completely font adaptive.

Bug Fix: It was possible to free gadgets more than once if all of them were not `↳` created.

V1.6 August 6, 1995

Selected entries in the listview are now shaded differently.

Added where to get `l:wbstart-handler` in the docs.

The list can be alphabetized from "Alphabetize list" in the "Edit" menu.

Added "ALPHABETIZE" as a tooltip. If the tooltip exists, then the list of programs will be alphabetized.

Now recognizes STARTPRI as the priority tooltype to conform more to OS3.x.
STARTUPPRI is still recognized, but obsolete, so if both STARTPRI and
STARTUPPRI are present, STARTUPPRI is ignored.
Changed the priority integer gadget to a slider gadget.

V1.7 August 15, 1995

WBStartup+Prefs window is now resizeable.
WBStartup+Prefs window now opens larger, depending on the visible screen size
and the number of lines in the listview gadget.
Can switch between Alphabetical sorting and Priority sorting via a menu.
If the list is sorted by priority, an edited priority will be moved into the
correct location in the list.
Fixed a couple font adaptive miscalculations.

V2.0 August 26, 1995

Programs can now be assigned to groups, making quick changes in the preferences
program quicker.
Holding the Left Shift key down during boot time, causes WBStartup+ to be ←
disabled.
MAJOR BUG FIX: Programs without icons (projects) were not being recognized.
Added several Group management menu items.
Added Select All, None, Toggle menu items.
WBStartup+ will not run any program with the name of "WBStartup+", that way if
you have the WBStartup+ program in the enabled directory, it will not run
recursively forever.
The alphabetic ordering in WBStartup+Prefs is now case insensitive using Locale.
Prefs window opening width is smarter.
Changed the look of the WBStartup+Prefs icon to look like the standard MWB prefs ←
icons.

V2.1 September 24, 1995

Now uses Memory Pooling instead of AllocVec().
Fixed potential bug in a list structure when alphabetizing.
Received permission to include L:WBStart-Handler in this archive.
Archive has moved to Aminet:util/boot
Removed accidental FreePool() when "Delete Group" was done, and there were no ←
groups.
Enforcer Hit removed: forgot to initialize glist=NULL before createContext().
Did I release V2.0 WBStartup+Prefs with a missing tail parenthesis in two path ←
tooltypes? Sorry.
A requester now appears when you quit without saving, and there was a group ←
modification.
WBStartup+ now has an optional Progress Indicator when it runs, which can have a ←
user defined background.
Changed the name of drawer icon images, so they don't have parentheses in them, ←
that way
they can be archived with lzx. They are copied by the installer script and ←
given their
proper default names with parentheses.
Included a WBStartup+ version for OS2.x and OS3.x
Updated installer script to recognize OS2.x and OS3.x

V2.2 September 27, 1995

Removed bug causing possible crash when disabling the PROGRESSWINDOW tooltype.

V2.3 October 3, 1995

The WBStartup+Prefs window is now a WB AppWindow, so you can drop icons into it and a requester appears asking you if you want to copy or move the files to the enabled or disabled directory.

Was allocating pathname size, and deallocating filename size.

Possible program crash removed due to another forgotten glist=NULL.

Add "... " to some menu items.

1.10 How to use WBStartup+

How to use WBStartup+

Tooltypes

~ENABLEDPATH~

~DISABLEDPATH~

~DELAY~

~PROGRESSWINDOW~

~BACKGROUNDPIC~ (for OS3.x only) link "BACKGROUNDPIC ↔
" 0} (for OS3.x only)

Disabling WBStartup+

Hold down the Left-Shift key during boot time.

~Changing~execution~order~

1.11 How to use WBStartup+Prefs

How to use WBStartup+Prefs

The Prefs program allows you to choose which program to run at startup, and in which order to run them.

Tooltypes

~ENABLEDPATH~

Must be the same as that of

~WBStartup+~

```
~DISABLEDPATH~  
    Must be the same as that of  
~WBStartup+~
```

```
~ALPHABETIZE~  
    App Window
```

You can easily copy or move files into the enabled or disabled directory by simply dropping icons into the window from workbench.

A window will appear asking you if you want to copy or move the files, and whether to put the files in the Enabled or Disabled directory.

The Listview Gadget

Each item in the list that has a checkmark will be run at startup. To toggle the checkmark, just click the left mouse button on the checkbox.

To change the startup priority of a program, click in that area of the listview, set the slider gadget to the desired priority and close the window.

To bring up the Workbench icon information window for one of the programs listed in the listview gadget, select the program name, and then select "Icon Window" from the "Edit" pulldown menu.

Creating Groups

Set the checkmarks in the listview to your desired settings. Choose "Create Group" from the "Edit" menu. Type the name that you want to call the group and press enter. You now have a new group. You MUST save the settings, or the new group will be forgotten. A requester will be appear to allow you to save any group modifications on ← quitting.

Selecting a Group

Choose "Group" from the "Select" menu. Select the name of the group you want to use from the list and select "Ok". (Double clicking works too)

Other Gadgets

Select "Save" to save the settings.
Select "Cancel" to exit the program without making any changes.

Select the "Restore" menu to restore the setting to what they were when WBStartup+Prefs was run.

1.12 Changing execution order

How to change the order in which the startup programs are run.

Use the

```
~WBStartup+Prefs~  
program.
```

OR

You may add the tooltype STARTPRI to any of the startup programs icons.

The values can be 127 to -128, where 127 has the highest priority and would be run first.

Programs without this tooltype are considered to have a priority of -128.

For instance, I gave MagicCopper : STARTPRI = 127 since I want that ugly plain looking screen to go away as soon as possible.

And I gave ToolManager : STARTPRI = 120 so it will load second, and I will have access to all my hotkeys quicker.

1.13 Tooltypes

Tooltypes

Choose the program:

```
~WBStartup+~~~~~  
  
~WBStartup+Prefs~
```

1.14 Tooltype: ENABLEDPATH

ENABLEDPATH=

Set ENABLEDPATH to the directory where the programs are that you want to run at startup (boot time).

Default:

```
ENABLEDPATH=SYS:WBStartup/WBStartup (Enabled)
```

1.15 Tooltype: DISABLEDPATH

DISABLEDPATH=

Set DISABLEDPATH to the directory where programs that should not be run at startup are. This is like a storage directory.

Default:

```
DISABLEDPATH=SYS:WBStartup/WBStartup (Disabled)
```

1.16 Tooltype: DELAY

DELAY=

Set DELAY to the number of 1/50ths of a second to wait between executing programs. So a value of 50 would wait 1 second. This was requested by someone with a slow hard drive.

Default:

DELAY=0

1.17 Tooltype: PROGRESSWINDOW

PROGRESSWINDOW

This allows you to disable the progress window.

This tooltype has NO values, it either exists or it doesn't.

To disable the progress window, simply place parenthesis around the tooltype name.

Examples:

PROGRESSWINDOW	The progress window will be shown
(PROGRESSWINDOW)	No progress window will be shown

Default:

PROGRESSWINDOW

1.18 Tooltype: BACKGROUNDPIC

BACKGROUNDPIC=

For OS3.x only.

This allows you to choose what the progress window's background picture. The datatypes.library is used, so you may use any picture format for which you have the corresponding datatype, ie. jpeg, gif, ilbm, tiff, targa, pict, pcx, bmp, etc. Although since some datatypes are slow, I recommend using ilbm pictures.

Values:

NONE	No picture is used.
SCREEN	The default Workbench Screen picture is used.
WINDOWS	The default Workbench Window/Drawer picture is used.
WORKBENCH	The default Workbench Root (non-backdrop) picture is used ↔
.	
filename	Type the pathname and filename of any picture you want.

Default:

```
BACKGROUNDPIC=WINDOWS
```

Example:

```
BACKGROUNDPIC=sys:pictures/favoritepic.iff
```

1.19 Tooltype: ALPHABETIZE

ALPHABETIZE

If this tooltype exists, the list of programs will be in alphabetical order, otherwise it will be in order by priority.

Examples:

```
ALPHABETIZE           The list will be alphabetized from A to Z.  
(ALPHABETIZE)        The list will be ordered by priority.
```
