Octave Quick Reference Octave Version 1.0

Starting Octave

octave	start interactive Octave session	
octave file	run Octave on commands in file	
octavehelp	describe command line options	

Stopping Octave

quit or exit	exit Octave	
INTERRUPT	(e.g. C-c) terminate current command	
	and return to top-level prompt	

${\bf Getting} \, {\bf Help}$

help	list all commands and built-in variables	
help command	briefly describe command	
help-i	use Info to browse Octave manual	
help-i command	search for <i>command</i> in Octave manual	

Motion in Info

SPC or C-v	scroll forward one screenful
DEL or M-v	scroll backward one screenful
C-1	redraw the display

Node Selection in Info

n p u t	select the next node select the previous node select the 'up' node select the 'top' node select the directory node
< > g	select the first node in the current file select the last node in the current file reads the name of a node and selects it
C-x k	kills the current node

Searching in Info

S	search for a string
C-s	search forward incrementally
C-r	search backward incrementally
i	search index & go to corresponding node
,	go to next match from last 'i' command

Command-Line Cursor Motion

C-b	move back one character
C-f	move forward one character
C-a	move the the start of the line
C-e	move to the end of the line
M-f	move forward a word
M-b	move backward a word
C-1	clear screen, reprinting current line at top

Inserting or Changing Text

M-TAB	insert a tab character	
DEL	delete character to the left of the cursor	
C-d	delete character under the cursor	
C-v	add the next character verbatim	
C-t	transpose characters at the point	
M-t	transpose words at the point	

 surround optional arguments
 ... show one or more arguments

 Copyright 1994, John W. Eaton
 Permissions on back

Killing and Yanking

C-k	kill to the end of the line
С-у	yank the most recently killed text
M-d	kill to the end of the current word

- M-DEL kill the word behind the cursor
- M-y rotate the kill ring and yank the new top

Command Completion and History

TAB M-? RET C-p C-n M-> C-r	complete a command or variable name list possible completions enter the current line move 'up' through the history list move 'down' through the history list move to the first line in the history move to the last line in the history search backward in the history list
C-s	search forward in the history list
history $\begin{bmatrix} -q \end{bmatrix} \begin{bmatrix} N \end{bmatrix}$	list N previous history lines, omitting history numbers if $\neg \mathbf{q}$
history -w $[file]$	write history to file (~/.octave_hist if no file argument)
history -r $[file]$	<pre>read history from file (~/.octave_hist if</pre>
edit_history lines	edit and then run previous commands from the history list
run_history lines	run previous commands from the history list
$\begin{bmatrix} b e g \end{bmatrix} \begin{bmatrix} e n d \end{bmatrix}$	Specify the first and last history commands to edit or run.
before editing. If beg to the end of	han end, reverse the list of commands end is omitted, select commands from the history list. If both arguments are previous item in the history list.

Shell Commands

cd dir	change working directory to dir	
рыq	print working directory	
ls [options]	print directory listing	
getenv (string)	return value of named environment variable	
<pre>shell_cmd (cmd)</pre>		

Matrices

Square brackets delimit literal matrices. Commas separate elements on the same row. Semicolons separate rows. Commas may be replaced by spaces, and semicolons may be replaced by one or more newlines. Elements of a matrix may be arbitrary expressions, provided that all the dimensions agree.

$[x, y, \ldots]$	enter a row vector
$[x; y; \ldots]$	enter a column vector $% \left({{{\left({{{\left({{{\left({{{\left({{{\left({{{c}}}} \right)}} \right.}$
[w, x; y, z]	enter a 2×2 matrix

Ranges

1

base : limit

base : incr : limit

Specify a range of values beginning with *base* with no elements greater than *limit*. If it is omitted, the default value of *incr* is 1. Negative increments are permitted.

Strings and Common Escape Sequences

A string constant consists of a sequence of characters enclosed in either double-quote or single-quote marks.

//	a literal backslash
\"	a literal double-quote character
\backslash ,	a literal single-quote character
\n	newline, ASCII code 10
\t	horizontal tab, ASCII code 9

Index Expressions

var (idx) var (idx1, idx2)	select elements of a vector select elements of a matrix
scalar	select row (column) corresponding to
	scalar
vector	select rows (columns) corresponding to the elements of <i>vector</i>
range	select rows (columns) corresponding to the elements of <i>range</i>
:	select all rows (columns)

Global Variables

global var1 ... Declare variables global.

Global variables may be accessed inside the body of a function without having to be passed in the function parameter list provided they are also declared global within the function.

Selected Built-in Variables

EDITOR	editor to use with edit_history
Inf, NaN	IEEE infinity, NaN
LOADPATH	path to search for function files
PAGER	program to use to paginate output
ans	last result not explicitly assigned
eps	machine precision
pi	π
realmax	maximum representable value
realmin	minimum representable value

automatic_replot do_fortran_indexing implicit_str_to_num_ok output_max_field_width output_precision page_screen_output prefer_column_vectors resize_on_range_error save_precision silent_functions warn_divide_by_zero automatically redraw plots Fortran-style indexing of matrices allow strings to become numbers maximum numeric field width min significant figures displayed control whether output is paged create column vectors by default automatic resizing of matrices digits stored by **save** command suppress output from functions suppress divide by zero errors

commas_in_literal_matrix

control handling of spaces in matrices

ignore_function_time_stamp

ignore changes in function files during session

ok_to_lose_imaginary_part

allow complex to real conversion

prefer_zero_one_indexing

if ambiguous, prefer 0-1 style indexing

Arithmetic and Increment Operators

and merement operators
addition
subtraction
matrix multiplication
element by element multiplication
right division, conceptually equivalent to (inverse(y') * x')'
element by element right division
left division, conceptually equivalent to
inverse (x) * y
element by element left division
power operator
element by element power operator
negation
unary plus (a no-op)
complex conjugate transpose
transpose
increment (decrement) x, return new value
increment (decrement) x_i return old value

Assignment Expressions

var = expr	assign expression	n to variable
var (idx) = expr	assign expression	n to indexed variable

Comparison and Boolean Operators

These operators work on an element-by-element basis. Both arguments are always evaluated.

$x \leq y$	true if x is less than y
$x \leq y$	true if x is less than or equal to y
x == y	true if x is greater than y
$x \ge y$	true if x is greater than or equal to y
x > y	true if x is equal to y
x != y	true if x is not equal to y
x & y	true if both x and y are true
$x \mid y$	true if at least one of x or y is true
! bool	true bool is false

Short-circuit Boolean Operators

Operators evaluate left-to-right, expecting scalar operands. Operands are only evaluated if necessary, stopping once overall truth value can be determined. Operands are converted to scalars by applying the **all** function.

x && y	true if both x and y are true
$x \mid y$	true if at least one of x or y is true

Operator Precedence

Here is a table of the operators in $\ensuremath{\mathsf{Octave}}_{+}$ in order of increasing precedence.

; ,	statement separators
=	assignment, groups left to right
& &	logical "or" and "and"
&	element-wise "or" and "and"
< <= == >= > !=	relational operators
:	colon
+ -	addition and subtraction
/\../.\	multiplication and division
· . ·	transpose
+ - ++ !	unary minus, increment, logical "not"
^ ^	exponentiation

Statements

for identifier = expr stmt-list endfor

Execute *stmt-list* once for each column of *expr*. The variable *identifier* is set to the value of the current column during each iteration.

while (condition) stmt-list endwhile

Execute stmt-list while condition is true.

break	exit innermost loop
continue	go to beginning of innermost loop
return	return to calling function

if (condition) if-body [else else-body] endif

Execute *if-body* if *condition* is true, otherwise execute *elsebody*.

if (condition) if-body [elseif (condition) elseif-body] endif

Execute *if-body* if *condition* is true, otherwise execute the *elseif-body* corresponding to the first **elseif** condition that is true, otherwise execute *else-body*.

Any number of ${\tt elseif}$ clauses may appear in an ${\tt if}$ statement.

unwind_protect body unwind_protect_cleanup cleanup end

Execute *body*. Execute *cleanup* no matter how control exits *body*.

Defining Functions

function [ret-list] function-name [(arg-list)]

function body

endfunction

ret-list may be a single identifier or a comma-separated list of identifiers delimited by square-brackets.

arg-list is a comma-separated list of identifiers and may be empty.

Basic Matrix Manipulations

rows (a)	return number of rows of a
columns (a)	return number of columns of a
all (<i>a</i>)	check if all elements of a nonzero
any (a)	check if any elements of a nonzero
find (a)	return indices of nonzero elements
sort (a)	order elements in each column of a
sum (a)	sum elements in columns of a
prod (a)	product of elements in columns of a
min (<i>args</i>)	find minimum values
max (<i>args</i>)	find maximum values
rem (x, y)	find remainder of x/y
reshape (a, m, n)	reformat a to be m by n
diam (h)	anonto din connl montriaco

diag (v, k)	create diagonal matrices
<pre>linspace (b, l, n)</pre>	$\ensuremath{create}\xspace$ elements
logspace (b, l, n)	create vector of log-spaced elements
eye (<i>n</i> , <i>m</i>)	create n by m identity matrix
ones (<i>n</i> , <i>m</i>)	create n by m matrix of ones
zeros (<i>n</i> , <i>m</i>)	create n by m matrix of zeros
rand (n , m)	create n by m matrix of random values

Linear Algebra

chol (a)	Cholesky factorization
det (a)	compute the determinant of a matrix
eig (a)	eigenvalues and eigenvectors
expm (a)	compute the exponential of a matrix
hess (a)	compute Hessenberg decomposition
inverse (a)	invert a square matrix
norm (<i>a</i> , <i>p</i>)	compute the <i>p</i> -norm of a matrix
pinv (a)	compute pseudoinverse of a
qr (<i>a</i>)	compute the QR factorization of a matrix
rank (<i>a</i>)	matrix rank
schur (a)	Schur decomposition of a matrix
svd (a)	singular value decomposition
syl (<i>a</i> , <i>b</i> , <i>c</i>)	solve the Sylvester equation

Equations, ODEs, DAEs, Quadrature

*fsolve	solve nonlinear algebraic equations
*lsode	integrate nonlinear ODEs
*dass1	integrate nonlinear DAEs
*quad	integrate nonlinear functions

perror (nm, code) for functions that return numeric codes, print error message for named function and given error code

* See the on-line or printed manual for the complete list of arguments for these functions.

Signal Processing

fft (a)	Fast Fourier Transform using FFTPACK
ifft (a)	inverse FFT using FFTPACK
freqz (<i>args</i>)	FIR filter frequency response
sinc (x)	returns sin $(\pi \mathbf{x})/(\pi \mathbf{x})$

Image Processing

colormap (<i>map</i>)	set the current colormap
gray2ind (i, n)	convert gray scale to Octave image
image (<i>img</i> , <i>zoom</i>)	display an Octave image matrix
imagesc (<i>img</i> , <i>zoom</i>)	display scaled matrix as image
imshow (img, map)	display Octave image
imshow (<i>i</i> , <i>n</i>)	display gray scale image
imshow (r, g, b)	display RGB image
<pre>ind2gray (img, map)</pre>	convert Octave image to gray scale
ind2rgb (img, map)	convert indexed image to RGB
loadimage (file)	load an image file
rgb2ind(r, g, b)	convert RGB to Octave image
saveimage (file, img, fm)	t, map) save a matrix to file

Sets

create_set (a , b)	create row vector of unique values
complement (a , b)	elements of b not in a
intersection (a, b) union (a, b)	intersection of sets a and b union of sets a and b

Strings

strcmp (s, t)	compare strings
strcat (s, t ,)	concatenate strings

C-style Input and Output

v 1	1
fopen (name, mode)	open file <i>name</i>
fclose (file)	close file
printf (fmt, \ldots)	formatted output to stdout
fprintf (file, fmt,)	formatted output to file
sprintf (fmt,)	formatted output to string
scanf(fmt)	formatted input from stdin
fscanf (file, fmt)	formatted input from file
sscanf (str, fmt)	formatted input from string
fgets (file, len)	read len characters from file
fflush (file)	flush pending output to file
ftell (file)	return file pointer position
frewind (file)	move file pointer to beginning
freport	print a info for open files
fread (file, size, prec)	read binary data files
fwrite (file, size, prec)	write binary data files
feof (file)	determine if pointer is at EOF

A file may be referenced either by name or by the number returned from **fopen**. Three files are preconnected when Octave starts: **stdin**, **stdout**, and **stderr**.

Other Input and Output functions

save file var load file disp (var)	save variables in <i>file</i> load variables from <i>file</i> display value of <i>var</i> to screen
Miscellaneous	Functions
eval (str) feval (str,)	evaluate <i>str</i> as a command evaluate function named by <i>str</i> , passing remaining args to called function
error (message)	print message and return to top level
clear pattern exist (str) who	clear variables matching pattern check existence of variable or function list current variables

Polynomials

compan (p)	companion matrix
conv (a, b)	convolution
deconv (a, b)	deconvolve two vectors
poly (a)	create polynomial from a matrix
polyderiv (p)	derivative of polynomial
polyreduce (p)	integral of polynomial
polyval (p , x)	value of polynomial at x
polyvalm (p , x)	value of polynomial at x
roots (p)	polynomial roots
residue (a, b)	partial fraction expansion of ratio a/b

Statistics

corrcoef (x , y)	correlation coefficient
cov (x, y)	covariance
mean (<i>a</i>)	mean value
median (<i>a</i>)	median value
std (a)	standard deviation
var (a)	variance

Basic Plotting

gplot [ranges] expr [using] [title] [style]	
gsplot [ranges] expr [using] [title] [style]	

ranges	specify data ranges
expr	expression to plot
using	specify columns to plot
title	specify line title for legend
style	specify line style

If ranges are supplied, they must come before the expression to plot. The using, title, and style options may appear in any order after expr. Multiple expressions may be plotted with a single command by separating them with commas.

2D plotting 3D plotting

set options	set plotting options
show options	show plotting options
replot	redisplay current plot
closeplot	close stream to gnuplot process
purge_tmp_files	clean up temporary plotting files
automatic_replot	built-in variable

Other Plotting Functions

L L L L L L L L L L L L L L L L L L L)
plot (args)	$2\mathrm{D}$ plot with linear axes
<pre>semilogx (args)</pre>	2D plot with logarithmic x-axis
semilogy (<i>args</i>)	2D plot with logarithmic y-axis
loglog (args)	2D plot with logarithmic axes
bar (<i>args</i>)	plot bar charts
stairs (x, y)	plot stairsteps
hist (y, x)	plot histograms
title (string)	set plot title
axis (limits)	set axis ranges
xlabel (string)	set x-axis label
ylabel (<i>string</i>)	set y-axis label
grid [on off]	set grid state
hold [on off]	set hold state
ishold	return 1 if hold is on, 0 otherwise
mesh (x, y, z) meshdom (x, y)	plot 3D surface create mesh coordinate matrices
