Greatest Children's Stories Publisher

The Greatest Children's Stories Publisher is a DOS based program. It will run through Windows if there is enough Low-DOS memory available. If you get the message "Insufficient Memory" while running the publisher from Windows, you don't have enough low-DOS memory available. There are two ways to resolve this problem.

1) Exit Windows and run the publisher from the DOS prompt.
>   (A) Exit Windows.
>   (B) Change to the CD-ROM drive.
>   If your CD-ROM Drive is drive D you would type
>
>   D: *<press ENTER> (Change the letter D to the drive letter of your CD-ROM Drive if necessary)*
>   (C) Change directory to the PUBLISH directory. Type:
>   CD   \PUBLISH   *<press ENTER>*
>
>   (D) Start the publisher. Type:
>   GRTCSPUB   *<press ENTER>*

2) Free up Low-DOS memory. The Low-Dos memory is the first 640K of memory in your computer. Programs such as device drivers and Terminate-and-Stay-Resident programs are sometimes loaded in this area of memory when the computer boots. Some of these programs may be able to be loaded into memory above this Low-Dos area. See your DOS manual about using LOADHIGH, DEVICEHIGH and MEMMAKER.
