

BattleField 3.20 Addendum:

I have added one major feature, and fixed one small bug in the game.

The major feature:

You are now capable of fortifying your castle. You may increase your wall height, the number of towers you have, the number of casks of burning oil you have, and the depth of the moat. They make all the difference in the game.

The bug fix:

There was a small bug that crashed BF on very RARE occasions when a person would search for a particular person and not find anything. It has been fixed. Everything else is the same.

Updating:

1. Go into the game, and reset it. (from the sysop menu)
2. Move the new version into the BBS folder.
3. Move the new Castle Menu into the BattleField folder. (it is the only menu that has been changed.)
4. Enjoy the game!
