

Shooting your Mac! (The Fun Part)

The best part about Madness, is that you can get your frustrations out on your Mac by shooting it! Let's take a look at how easy it is to shoot the guns...

Checking the Trigger

First, activate the Madness - CDev (discussed under the chapter 'selecting guns'). Then look to see what the trigger is set for. See Below...

ooting the Guns

1. First you must 'cock' the gun. Simply, hold down the Command & Shift keys.
2. While continuing to depress the Command & Shift keys, press the trigger key.
3. Now the gun is active. The active cursor will change into a gun sight of the appropriate gun.

ote: Each gun has it's own different gun sight.

4. Now you are ready to shoot! Each time you want to shoot either click the mouse button or type the space bar. When the gun is empty you will hear the 'Click' sound.

Hint: To shoot rapid fire, activate the 'Keyboard' CDev and increase the 'key repeat rate' and then hold down the space bar when you are shooting.

Return everything to normal

To return your screen back to what it was before you blew holes in it.... Simply hit the return key.
