

### **1. PROBLEM**

No sounds when I shoot the gun.

### **1. ANSWER**

Madness uses 'application memory' to load all of the pictures and sounds that it needs to fire a weapon.

Chances are, the application you are attempting to shoot holes into does not have enough of it's own memory to support all of the pictures and sounds required.

The way around this is to manually increase the amount of available memory an application has.

1. First locate the application giving you trouble.

2. Then select 'Get Info' from the 'File' menu.

3. Look for the suggested memory box and increase it 50K - 100K. See if this solves the problem, if not simply repeat this process until the guns sound appears. This should not be a problem for most apps.

See Below...

### **. PROBLEM**

Cursor changes into a watch and hides my gun cursor.

### **2. ANSWER**

System 7's finder and T/Maker's WriteNow application are two applications that do this. It is not a serious problem, the guns still shoot and sound. But we are working on it. Do not worry!

### **3. PROBLEM**

Madness sometimes works with the sounds and sometimes does not work with the sounds

### **3. ANSWER**

This problem is with System 6.x and the LC ONLY. We are working on it. Do not worry!
