College Calculator: *Iq* 15-C

   This DA is the first attempt to completely emulate the HP15-C. The task has turned out to be more involved than I first thought. Most of the basic scientific functions have been offered in this calculator. Although some of the more complex functions are not yet available and some have been replaced by substitutions. I hope that this does not disappoint anyone to the point that they remove this calculator from their library of desk accessories. I hated to leave out the matrixes functions, but I have not had the chance to complete the program script that will allow their use. Also their are other functions that have yet to be added do to the same reason. As I get time I will work on all of the differences of this calculator and hopefully have a version that is a 100% emulation of the 15-C. I have also included a font file, which will be needed for the realism of the LCD Display.

   When I used my Mac for completing my Digital courses, I would have liked to have a calculator DA of this type. I found going from my Mac to my HP time consuming and desk cluttering, although my books and notes were already enough to clutter my desk. I hope you find this a useful addition to you software.

   All I ask in return for this DA, is that you register it by sending the $5 fee and make sure that this document does not get separated from the DA file. Also pass this around to any Mac companions that you may know and to your favorite BBS. I'm not sure when I will get back to this project, but I can promise you that it will continue until I finish what I set out to do (HP 15-C emulation).

   Since I cannot control the possibility of bugs in the construction kit that I used or their effect on resulting software and I cannot control the configuration of systems which this software is being used under, with respect to the way it is being used and distributed, there shall not be and there are no warranties expressed or implied to the condition of this software and to any conditions that may arise from use of this software. To put this in plain terms, this is "as is" software. Use it at your own risk. I do use it myself though.

Don't forget to send in your shareware fee of $5!
