

## Spreadsheet View

MacPing normally displays device names in the "spreadsheet" view. In this view, the NBP names, types, node numbers and percent dropped information are shown in four columns. The alternate view concatenates the device's Name and Type fields. You can toggle between the views by typing `^N`.

Use Spreadsheet view to see the most information about the devices. Use the alternate view to speed up the testing process, especially on slower Macintosh computers. (MacPing takes a long to re-format all the columns of data.)

In the Spreadsheet view, clicking on any of the column headings is equivalent to selecting the corresponding "View by..." menu choices under the "View" menu.
