Do It With ViewIt

   ViewIt is one of the best Mac programming tools available for creating powerful windows containing many views and custom controls.   This window, for example, is a ViewIt window containing 2 views and a large number of controls.   It takes just 5 lines of simple code to open and manage this window!   No other programming tool on the Macintosh makes it so easy to create such sophisticated windows.

   Choose items from the Topics menu above to learn more about why you should be using ViewIt to open, edit, and manage windows in your programs.
