Copyright ' 1992 Visions Edge, Inc.

DocStamp is freeware but Visions Edge, Inc. retains all rights to the code and resources of the program. This document must be distributed unaltered with DocStamp . I don t believe in shareware, so do NOT send me money even if you find this XTension useful. If you feel you must compensate me in any way then purchase one of my other useful XTensions for QuarkXPress. These XTensions are listed below and are available through XChange 1-800-788-7557 or 1-303-

DocStamp allows you to place the document name in a box and every time the document is saved, the name of the document is placed in the DocStamp boxes.

Attaching a Document Stamp

To attach a DocStamp , create a new text box and select Add Document Stamp from the Utilities menu. The name of the document is inserted into the box. If the box already contains text, an alert is posted to warning you that the text will be erased when the document stamp is added. You can abort the document stamp by pressing Cancel in the alert dialog.

Removing a Document Stamp

To remove a document stamp, select the box that contains the document stamp and select Remove Document Stamp from the Utilities menu. If the box does not contain a document stamp, the Remove Document Stamp does not appear. Instead, Add Document Stamp appears in the menu. You can also remove a document stamp by deleting the box that contains the stamp.

229-0620.

AutoLib

Autolib automatically creates QuarkXPress® libraries from a folder. You put the graphics in a folder and select the folder with AutoLib and the XPress library is created with all the graphics.

ColorChange

ColorChange lets you search for and replace the colors in a QuarkXPress® document. Can selectively change text, frame, background and picture colors, as well as the color shading.

ColorBundle

ColorChange, ColorPrefs and Color Usage in one package.

Color Usage

Color Usage displays the colors that are actually being used in a document. The Color Usage dialog includes the color used as well as the page, shade and where the color is used.

CopySet

A palette that displays overset and underset text, as well as the overset and underset text count. The palette can be used to trim the box to include the text, append edit boxes to the text chain and count the words, lines and characters in a story.

FlexScale

Scales the printed output horizontally and/or vertically. Useful for flexography.

Missing Link

Allows linked text boxes that both contain text to be linked. Additionally, boxes can be removed from a text chain or duplicated while still retaining their text.

Navigator XT

Palette to allow easier movement through an XPress document. Can take you to any page, master page or position ion the current page or spread instantly.

Picture Tools

Variety of XTensions for use with pictures. Utilities include size box to picture, greek all pictures using a command key, a picture suppression dialog, and individual picture greeking.

Resize XT

Resize XT allows groups of boxes, lines, text and pictures to be scaled to any percentage between 20% and 400%.

TeXT Tools

Variety of XTensions for use with text. The XTensions include skewing text boxes, upper case to lower case conversion and exporting all the text in the document.

Thesaurus reX

A 220,000 work thesaurus for QuarkXPress®.

TimeStamp

Attaches time and date stamps that are automatically updated when the document is saved. Includes flexible date formats and the option to include the Chooser name.

Utility Pack

A variety of XTensions that include: a palette to open and close other palettes, a palette for setting the vertical text alignment and text insets, and a popup menu that allows document preferences to be stored and accessed when creating a new document.

Free XTensions

ColorPrefs

ColorPrefs allows you to change the colors of many QuarkXPress® items. Examples include dialog backgrounds, page shadows, page guides.

DocStamp

Places the document name in a box. The name is updated whenever the document name is changed.
