

MacPuke INIT

© 1987 by Daniel Green

MacPuke is an offensive INIT that will cause your Mac 2 sound like it's vomiting every time U eject a disk (well..., not quite every time). To install it, simply drag it into your system folder if U R running under HFS. IF you're not, then GET WITH THE PROGRAM. After it has been placed into your system folder, U must restart your computer in order 4 MacPuke 2 take effect. When U get tired of it, simply drag it out of your system folder and restart your computer again.

What do U mean MacPuke won't run on your machine? What's that? You're still running on the 64K ROM's ? GET WITH THE PROGRAM. Seriously though, IF U try 2 install it, it simply won't work.

MacPuke is free 2 all. It may not B sold 4 profit or used as an inducement to purchase other products(PC dealers feel free 2 use this 2 discourage someone from purchasing a Mac). I ask only that the following conditions be observed. 1st, please distribute only copies of MacPuke with the original name (Change this name at your own risk). And 2nd, please distribute this document with each copy of MacPuke. MacPuke will work on a 512e, MacPlus, & a Mac SE. It has not been tested on a Mac II, but it should work.

Dan

P.S. "**I'll B Back!**"..., Soon. So stay tuned.
