The Package

The package consists of a HyperCard 2 stack with colour resources, and shows how the resources may be used.   There are also three (3) Kid Pix™ files, each as an example of the three (3) levels of the resources.   These resources have not been locked so that they can be examined on the disk, however they should be locked as Stationery files, as should all the other resources, in this way the original file will always remain intact, and will not be lost when children colour the pictures.   The resources on this disk have been resized so that can be used on a 12 inch colour monitor, the original pictures were created for the 13 inch monitor and are, obviously, bigger.   The disks can be ordered in both sizes, and this should be specified on the order form.

This is an extract from the Hypercard Stack showing how the "Nativity" resource would appear in Kid Pix™.
