

About this patch...

This patch cannot work properly while virus detection software is running. Please make sure that you have disabled any virus detectors before applying the patch.

It will update the German version of Sound-Trecker 2.0 to an English version of SoundTracker 2.0. This is just a simple hack that I threw together for myself. It doesn't have documentation, and a few of the menus and dialogs are still in German, but most of the menus and dialogs are in English, as best I could translate it. Your preferences should still be preserved from the German version. Be sure to look at the balloon help also. Balloon help created using BalloonWriter 1.0b3, © 1990 Apple Computer.

If you make an English patch with more English than mine, it is suggested that you call it "SoundTracker 2.0e3" with "vers" resource showing version "2.0.3". If you use any of my modifications, please also give me credit and mail me a copy of your updater.

This software is free. Please distribute to everyone. I am not responsible for any damage whatsoever resulting from the use of this software.

Changes from version 2 of this patch

Added 'vers' resource support. The problem was that my copy of SoundTrecker and the one on the InterNet were slightly different. one said "Copyright © 1991-1993..." and the other said "© 1991-1993...".

Changes from version 1 of this patch

Fixed problem with the "vers" resource.
