Overview

The **Easy Internet User Guide** is designed for first time users.

If you are not familiar with Windows, run the Windows tutorial. For Windows 3.1 and 3.11 users, from the Program Manager, click on the Help menu and click Windows Tutorial. Windows '95 users, click on the Start button, click on Help, when the Help dialog box appears click the Contents tab, click on Introducing Windows, then click on Open.

Welcome to Easy Internet Software

Easy Internet software provides the quickest and easiest way to configure your PC for the Internet. As a bonus, Freeware and Shareware of the most popular Internet programs are provided on the CD for free! That's right! Zero down-load time. This User Guide provides a general overview of the techniques needed to navigate through Easy Internet software. Easy Internet is straightforward and easy to use. Help with using the program is always available through the Help menu by clicking on a Help command button in a dialog box or by pressing the Shift+F1 keys.

System Requirements

A 386SX25 IBM compatible PC with 4 Mb of RAM with a VGA monitor running Windows 3.1 version or higher and a 14.4 modem.

Installation

When the Easy Internet CD-ROM is placed in the CD-ROM tray and the tray is closed, an autorun feature will launch the Installation program.

For those who do not have an autorun feature or have it disabled, you may launch the installation program by running the Enet.exe located in the root directory of the CD-ROM.

License Agreement

You must agree to the license agreement or you will not be able to install Easy Internet or any of the other software programs included on the CD-ROM.

Personal Configuration

Enter your ISP, Real Name, and ISP User Name.

ISP Configuration Code

The code required to install Easy Internet, usually the ISP name which provided you with the CD-ROM. This name is not case sensitive.

Real Name

Enter your full name. (Ex. Jane D.)

Note: There are programs that allow others to "finger" you and find out your real name. If you do not want others to find out your full name, do not enter your full name in this box.

ISP User Name

Enter just the user name, NOT user_name@isp.net

Confirm Code

Press the **Confirm Code** button once all the information boxes have been filled. If you have entered the correct code, you may now configure your PC to connect to the Internet and install the Freeware / Shareware.

No Code

Press the No Code button to install any of the Freeware / Shareware without entering a password.

Programs to Install

Left-click on the icon of the program you wish to install and either click on the **Install** button, right-click the mouse button and choose the **Install** command or keep the mouse button held down and drag it to the **Easy Computer** dialog box and release the mouse button (drag and drop it).

Use the Scroll bars and arrows to view all the icons or stretch the dialog box until all the icons are visible.

Easy Computer Description

Allows program icons to be dragged and dropped for quick installation.

Mb Free RAM/Virtual (Memory Status)

System Information about the memory status of the PC.

Physical Memory

The amount of Random Access Memory of your PC.

Page File Size

The amount of hard drive space used as Virtual Memory.

Memory Load

Amount of System Resources available to run applications.

Internet Configuration

Configures the PC for dialing into the Internet Service Provider "the Internet." Pick the Closest Location button to display the "dial up" phone number.

Pick the Closest Location

Choose the closest, "toll free" town to you, if possible your home town.

Pick a Local Number

If you are unsure which town to select and your ISP has provided a local dial-up number, type the phone number in this box.

ISP Specific Configuration

Most ISP's use dynamic or "non-fixed" Internet Protocol addresses. However, if your ISP has provided you with a static or "fixed" IP, enter the numbers in the respective boxes. The number will look like this: 172.16.48.126

Update Configuration

This is the final step to configure your PC for the Internet. Press this button after you have chosen the Location, Local Number, and ISP Specific Configuration. If the words "Not found" appear in the right column, it usually means the program has not been installed. Simply click on the OK button and install the programs that you wish to add then choose the Internet **Configuraton| Update Configuration** buttons.

Dial-Up Networking

A **Dial-Up Networking** icon will be created on your desktop. Once you have finished adding software, close EZN and double-click the **Dial-Up Networking** icon to connect to the ISP / Internet, *the ISP User Name (Ex. ZeroCool) you entered in the Personal Configuration dialog box appears here automatically*, enter your password, and press the **Connect** button. Your modem will attempt to connect to the ISP / Internet.

Note: For modem / hardware diagnostic problems, read your documentation, consult any on-line help files, or technical support.

Note: The **Save Password** checkbox will only appear if **Client for Microsoft Networks** component is added in the **Control Panel|Networks** dialog box.

Program Descriptions

Click on any of the program icons in the Programs to Install dialog box and the description of the selected program will appear in the Program Descriptions dialog box.

This is an example of the information that would be displayed when a program icon is selected.

Toolbar Description

The Toolbar allows you to quickly find the [About](#), launch the [Personal Configuration](#) or [Technical Support](#) dialog box, open Help, or Quit the program.

About

Version Information about EZ Net Setup.

Technical Support

The Technical Support button offers two methods to clean-up possible problems with your PC.

Useless WinSock Elimination

Removes useless winsock dll's from your hard drive, AOL, Compuserve, other non-ISP type winsock specific files which may cause problems configuring your PC to dial into the Internet.

ScanDisk

Launches the Microsoft ScanDisk program.

Close

Close the Technical Support dialog box and return to the main program.

Installing Programs

Left-click on the icon of the program you wish to install and either click on the **Install** button, right-click the mouse button and choose the **Install** command or keep the mouse button held down and drag it to the **Easy Computer** dialog box and release the mouse button (drag and drop it).

Use the Scroll bars and arrows to view all the icons or stretch the dialog box until all the icons are visible as seen below.

**{ewc D2HTools, D2H_256Color, help0002.bmp} Adobe Acrobat Reader 3.0
FREWARE**

Adobe Acrobat 3.0 software is the fastest way to publish any document on-line.

Adobe Acrobat 3.0 empowers everyone in your company to create and share business documents across platforms with their original look and feel intact. Check out the key features and customer success stories. Acrobat 3.0 includes a complete tool-set for converting electronic files created in your favorite applications into the Adobe Portable Document Format (PDF) and publishing them on your Web site, Intranet, CD-ROM, or by e-mail. Whether you're an executive using Microsoft(R) Office products, an engineer using a CAD program, or an art director using desktop publishing software, you can quickly deliver business documents to a colleague or to the entire company, without re-authoring or learning new applications.

Anyone with a browser and free Adobe Acrobat Reader software can instantly access PDF files on the Web. Since Acrobat is independent of platforms, applications, and distribution media, it is the ideal basis for your long-term document distribution, archiving, and retrieval strategy. You can even use Acrobat 3.0 for Windows to scan and convert everyday paper business documents to PDF. And to put large volumes or entire archives of paper on-line, try Adobe Acrobat Capture(R)!

{ewc D2HTools, D2H_256Color, help0003.bmp} FreeAGENT FREEWARE

FreeAgent is your access to news, fun and information in the Usenet newsgroups. Free Agent is offered as freeware, and is available in both 16-bit and 32-bit versions.

ONLINE/OFFLINE OPERATION

You can configure Free Agent for online or off-line operation to set your own balance between convenience and economy. In off-line mode, it briefly connects to the server to retrieve articles and headers, then lets you browse them off-line and mark the interesting ones; and then goes online for another quick session to retrieve the marked articles. In online mode, you can browse newsgroups at will, dipping into threads as they interest you. You can still mark long articles to be downloaded later, or you can download one article while browsing others.

MULTITASKING

Free Agent does internal multitasking, allowing you to do many online tasks at once. For example, you can browse articles in one news group while retrieving headers for another, or downloading articles while continuing to browse.

IMAGES and BINARY ATTACHMENTS

You can post and receive articles with binary attachments with automatic splitting and combining to span multiple messages. If the attachment is viewable (like an image or a sound) you can view it from within the news reader. The world of alt.binaries.pictures is yours to command!

EASY BROWSING

Free Agent makes it easy for you to quickly sample threads and newsgroups. You don't have to subscribe to a news group to see what's happening if you're wondering what alt.usenet.kooks is all about, you can dip into it and get only the most recent articles. You can then subscribe to it, get more articles, or just decide they're a bunch of kooks and move on.

(c) Copyright 1996, Forté

{ewc D2HTools, D2H_256Color, help0004.bmp} **CommNet** **SHAREWARE**
\$29.95

CommNet is a Windows/Windows 95/Windows NT compatible data communications application which seamlessly integrates Internet Telnet and modem dial-up and capabilities into a single, fast, full-featured, and easy-to-use application. CommNet supports both ZModem and Telnet ZModem file transfers and VT100/full-color PC ANSI emulations.

Internet Telnet and Dial-Up Functions

- Phone book which provides easy access to multiple dial-up and Internet Telnet connections
- Supports one dial-up session and multiple Telnet connections simultaneously
- Supports high performance ZModem file transfers with Internet Telnet and dial-up sessions. ZModem crash recovery and auto-downloading enabled. YModem-G is also available for dial-up sessions
- Supports TTY, VT100/VT100 line drawing, and full-color PC ANSI terminal emulations
- Can be used as the Telnet application for a World Wide Web (WWW) browser
- Optimized screen graphics routines to improve response time and reduce overrun errors
- Quick access floating menu for session windows to provide fast cut/paste capability
- Session capture facility to record session text to a file. Multiple sessions can be captured simultaneously
- Entire session contents or selected portions of the session can be saved to a file or output to a printer
- Informative status bar with connect time, type of connection, system time, and modem/connection status indicator lights

Ease of Use

- Supports attached/transparent printing
- User selectable number of row and column sizes for session windows
- Drag and drop file uploading
- Toolbar with descriptive icons which provide quick access to commonly used commands and applications. Supports user-definable toolbar applications
- Natural Windows select, cut, and paste interface

Ease of Customization

- Customizable session window size, terminal settings, font, background color, and text color
- User definable fast function keys to transmit commonly used character string sequences
- Support for multimedia sound effects on specified events (requires multimedia-capable sound card)

{ewc D2HTools, D2H_256Color, help0005.bmp} Domain Name Searcher
SHAREWARE \$19.95

DomainSearcher --- Your Domain Name Research Assistant!

DomainSearcher makes it easy for you to search for domain names from Internic---the domain registration company! It's the easiest way to search for and investigate possible domain names before registering your own domain name.

Easy to use interface removes all Internet complexities. Never heard of "whois?"---Don't worry about it! Parses and presents server response in an easy to read format. View found domain name information or even open up found domains' web sites from the program (using your default browser) Save or print found domain list and information. Link to Internic's home page for domain registration.

**{ewc D2HTools, D2H_256Color, help0006.bmp} EudoraLIGHT FREWARE
(POSTCARDWARE!!)**

Eudora LIGHT is a fantastic E-mail client, versions available for Windows 3.1, Windows 95, and Mac. Without a doubt the best e-mail client in the world. This is the freeware version of Eudora for Windows. There is also a commercial version of Eudora called Eudora Pro (Version 2.0 and above). If you would like information about the commercial version, a brief description is provided in the Help menu of this freeware. Select About Eudora Pro to display this dialog. You can also subscribe to the QUALCOMM Enterprise Software Technologies (QUEST) mailing list by selecting QUEST News from the Help menu. This list will provide subscribers with occasional information about Eudora, Eudora Pro, and other QUEST products.

The Windows freeware user manual can be found at

[<ftp://ftp.qualcomm.com/quest/windows/eudora/documentation/>](ftp://ftp.qualcomm.com/quest/windows/eudora/documentation/)

Eudora Light is postcardware!

If you try out Eudora, and decide that you'd like to use it on a regular basis, then just send a postcard to the following address:

Jeff Beckley

QUEST

QUALCOMM Incorporated

6455 Lusk Blvd.

San Diego, CA 92121-2779

USA

Postcards that have something to do with where you live are an especially good choice, as I like to see all the interesting places that Eudora is being used. Humorous or unusual postcards are a favorite of mine, and you never know when I may decide that someone's postcard was interesting enough to make them a tester for the commercial version of Eudora.

The Eudora for Windows Development Team

Jeff Beckley beckley@qualcomm.com

Julia Blumin jblumin@qualcomm.com

Craig Lauer clauer@qualcomm.com

Willie Sakai c_wsakai@qualcomm.com

**{ewc D2HTools, D2H_256Color, help0007.bmp} Microsoft Internet Explorer
FREEWARE**

Want to surf the Web? Then you need Internet Explorer by MICROSOFT! This program delivers everything you need to start surfing the Web. Included with MS Explorer is a TCP/IP dialer, comic chat, and a host of other applications. If you're new to the Internet you will want to install this program first, as it contains everything needed to get up and running. Best of all this program is FREEWARE. Yours to use without payment.

Check out the favorites that we have pre-installed. You will find links to many computer manufactures, shareware sites and other pages of interest.

Without a doubt, Microsoft has released the best all around Web Browser available.... and not just because its free!

{ewc D2HTools, D2H_256Color, help0008.bmp} **HOTDOG Web Editor**
SHAREWARE **\$99.95**

The professional choice for Webmasters and web enthusiasts - HotDog Professional 3 Web Editor is the ultimate HTML Authoring power tool for Windows 95. Even though HotDog is tremendously powerful and feature-rich, the program is very user-friendly thanks to the superb built-in help files, detailed tutorials and intuitive interface.

HOTDOG PRO 3 SYSTEM REQUIREMENTS

IBM-Compatible PC, 486 or better, Windows 95 & NT, Minimum 16Mb RAM, Mouse

HotDog Pro is designed to allow you to do the latest and greatest on the web, with a minimal amount of fuss and effort. All the power of the latest HTML tags is presented to you in an easy to use format. The code is always available to you, so you can learn HTML along the way.

Here are just some of HotDog Professional 3's powerful new functions:

- Extensive support for style sheets and plug-ins

- The ability to edit files remotely on the server

- Java tools for creating multi-function animations from single or multiple graphics, and multiple text animation effects

- Gif89a Animation creation

- Easy frame creation

- Client Side image maps

- Java script effects including screen fades, splash animations and clock functions

- Document template creation

- Bandwidth conservation tools like the GIF -> JPG converter and our bandwidth buster

- Customizable and dockable toolbars

{ewc D2HTools, D2H_256Color, help0009.bmp} **KALI** **DEMO (15 min Time Limit) \$20.00**

What is Kali?

Kali is the largest Internet gaming system in the world with over 50,000 users and 150 servers in 25 countries. Kali supports more games than any other internet gaming system, including Apache, Big Red Racing, Command & Conquer, Cyberstorm, Deadlock, Descent / Descent 2, Doom / Doom II, Duke Nukem 3D, EF2000, Heretic, Hexen, Mechwarrior 2, Mortal Kombat 3, Quake, Super Karts, Terminal Velocity, Top Gun, VR Pool, Warcraft / Warcraft 2, and others. The Kali system runs in DOS, Windows 95, Macintosh, and even OS/2.

Join the Kali revolution

Kali has a simple philosophy...quality Internet gaming that won't cost you an arm and a leg every time you play. Don't worry about your wallet when you are in the middle of a fire-fight and don't know when or if you will come out of it alive. The Kali team is growing and working all the time to bring you the best in Internet gaming...at an unbeatable price.

Kali began as a DOS program that "tricked" your computer into thinking the person in Australia was actually on the same local network as your computer. The success of the DOS program led to the development of an OS/2 version, a Windows '95 version and most recently a Macintosh version.

What do I need to run Kali?

You need a good computer; a 486/50 is a minimum, with one of three things: either a modem (at 28k is HIGHLY recommended), an Ethernet card (for those with direct connections, like on many college campuses), or an ISDN modem (for those lucky enough to have the service provided; call your telephone or cable company to find out more.)

If you are like most of us, you have a modem connection to the Internet. The most common type of Internet account is PPP. It is also referred to as a Dial-Up Network Account. Be sure to get a provider that has at least a full T1 connection (not a partial T1) and offers true PPP (not an emulator). NOTE: Online services like AOL, WOW, Prodigy and Pipeline do not yet provide the required type of connection. Other services like GNN can work in Windows '95 if you use software other than what they provide.

Once you have your computer connected to the Internet by dialing into your ISP, you run Kali, find a game and launch yourself into mayhem!

{ewc D2HTools, D2H_256Color, help0010.bmp} mIRC SHAREWARE
\$15.00

mIRC is the hands down best client for connecting to IRC (Internet Relay Chat). Talk real time to thousands of people from all over the world. The interface of mIRC is extremely user friendly. With just a few minutes of practice you will be a pro!

mIRC is a SHAREWARE program and requires registration/payment if you use it longer than 30 days. A complete description of how to register can be found in the menu bar HELP/REGISTER.

mIRC has the following features:

- Colored text to ease reading
- Uncluttered display
- Comprehensive alias definitions
- Configurable multi-level pop-up menus
- DCC Send/Get/Chat/Resume
- Scripting commands
- Finger client
- Remote CTCP tool
- Simple Event handler
- Some basic fonts
- Identify server
- Simple file-server
- URL Catcher

Command History

- Function Key definitions
- Toolbar with Tool Tips
- Finger server
- A handful of options
- Many other useful bits and pieces

For the latest version of mIRC, the FAQ, information on bugs, solutions to problems, general IRC help, etc. please see the Official mIRC Homepage located at:
<http://www.mirc.co.uk>

{ewc D2HTools, D2H_256Color, help0011.bmp} Net Nanny SHAREWARE
\$39.95

Net Nanny is the only software program that allows YOU to monitor, screen and block access to anything residing on, or running in, out or through your PC, online or off. It's two-way screening in real-time and only YOU determine what is screened with the help of our site list which can be downloaded free from this site. Net Nanny allows you to deal with: WWW URLs, Newsgroups, IRC Channels, FTPs, E-mail, Non-Internet BBSs, Words, Phrases, Personal Information (address, credit card no. etc.), and control access and use of any local PC files, drives, loading of unauthorized diskettes and CD-ROMs and point & click commands. It's a complete Internet and PC management tool.

Operates on the Internet, non-Internet BBSs, All major online services such as Compuserve, AOL & Prodigy (Both proprietary and Internet components) and all local applications running on the PC.

No monthly site update subscription fees ever!

{ewc D2HTools, D2H_256Color, help0012.bmp} NewsXpress FREEWARE

This easy to use yet extremely powerful news reader is blazing fast. It's simple GUI (Graphical User Interface) allows for quick navigation of news group. It has many advanced options such as killfiles, window arrangements, and even to show toolbars or not, so you get maximum viewing space. It's simple options are great for beginners, yet they are still advanced so you can read the newsgroups exactly the way you want.

{ewc D2HTools, D2H_256Color, help0013.bmp} Pegasus Mail FREeware

Pegasus Mail is an electronic mail system for use with Novell NetWare (versions 2.15A and later), and on standalone systems using the WINSOCK TCP/IP interface. It is a full-fledged mailer, one of its more unusual characteristics being that it is freeware - not shareware, but "free". You can use it without charge, restriction or obligation on as many servers and machines as you wish. One of the most remarkable things about Pegasus Mail is the fact that it is absolutely FREE. But if you are using Pegasus Mail, as an organization or as an individual, and if you are satisfied with its performance and features, it would be a very clever decision to order one of the (sets of) manuals. That would benefit you and/or your organization in two ways: you receive those excellent printed manuals *and* you also invest in the current and future support of the programs and their development.

{ewc D2HTools, D2H_256Color, help0014.bmp} PowWow **FREeware**

PowWow is an unique personal communications program for the Internet. It offers two main functions: a personal communicator, and a conferencing system.

As a personal communicator it allows you to call your friends, chat with up to seven (7) people by keyboard or voice, show a picture of yourself, send and receive files, play MS-Windows .WAV format sound files, and browse the World-Wide Web together as a group. All you need to know to communicate with another PowWow user is his or her email address. PowWow will automatically connect with them, provided PowWow is running on their computer.

In conference mode, PowWow allows you to set your computer up as a conference server and up to fifty (50) people can connect with you. You may set yourself up as a temporary conference, or a permanent conference. You may choose to be the conference moderator or you can create a full-time non-moderated conference.

PowWow runs in personal communicator and conference modes at the same time. If you are hosting a conference or connected to one, you can still talk with other people running PowWow and use all the personal communicator functions.

PowWow comes with a file named HISTORY.TXT which contains late-breaking news and other information not covered in the PowWow Users Guide. Please check this file before continuing.

The file README.1ST gives step-by-step instructions on how to install PowWow for the first time or upgrade an existing installation. A copy of the PowWow Frequently-Asked Questions Guide is also included. The document is a HTML document containing the answers to many common questions about PowWow. The name of this file is PW-FAQ.HTM and it can be viewed with any World-Wide Web browser.

The latest version of PowWow, along with technical support and information about Tribal Voice, may be found on the Tribal Voice World-Wide Web server at <http://www.tribal.com/powwow>.

Running PowWow

To allow other people to connect to you, you must have PowWow running. After WinSock has been initialized, double-click on the PowWow icon. A dialog box will appear requesting your Local User I.D. and password. Enter your email address as your Local User I.D. You may choose any password of up to seven (7) characters. Select OK. The PowWow main screen will appear. At the bottom of the screen the message "attempting to register with PowWow server" will appear followed "Registration accepted by Server" if your Internet connection is properly functioning. PowWow is now active and ready for connections to or from other PowWow users. If you are not intending to immediately connect with someone, minimize PowWow so it remains active in case someone wishes to connect with you.

{ewc D2HTools, D2H_256Color, help0015.bmp} Trumpet Winsock
SHAREWARE \$25 (Single User License)

A dialer and TCP/IP stack to get you connected to the Internet.
Revised documentation including online help. Improved online Internet registration system. New scripting commands. More flexible demand loading with the Login on network activity feature. An installer!

{ewc D2HTools, D2H_256Color, help0016.bmp} WebPhone SHAREWARE
\$49.95

Using WebPhone™ 2.0 ensures that you'll never have to miss out on life's most important events. WebPhone is the professional, full featured Internet telephone with an on-line/off-line integrated voice mail system that provides telephone quality, real-time, full duplex, encrypted, point-to-point voice communication over the Internet and other TCP/IP based networks. Using our WebPhone software and the Internet, you can talk and see the world without incurring any long distance charges.

WebPhone 2.0 provides the following features:

- Point-to-Point Calling via e-mail address
- Telephone quality real-time speech
- On/Off-line integrated Voice Mail System
- 4-Lines with Call Holding, Muting & Do Not Disturb
- Call Blocking
- Complete Caller ID
- NoteBoard for interactive party specific text chat
- Enhanced User Interface
- Call Conferencing
- Call Transferring
- Full Duplex Voice Communications
- Personal WebPhone Directory
- On-hold MIDI Music
- Improved audio quality with TrueSpeech™
- Last Party Redial
- Speed Dialing
- Conversation Encryption
- Integrated Real-Time Information Assistance
- Party specific, user definable, custom Outgoing Messages
- Integrated, context sensitive, interactive Multimedia User Manual
- User customizable Sound Effects
- State-of-the-art software equipment-based Graphic User Interface for simplified ease of use
- Operates on the Internet as well as over any TCP/IP based LAN or WAN
- "How To" Guide
- Much, much more...

{ewc D2HTools, D2H_256Color, help0017.bmp} Win TELNET & FTP
SHAREWARE \$29.95

WinTelnet & FTP Pro is a shareware telnet and ftp program that brings the ease of use of Windows to the Internet! No longer will you need to memorize arcane UNIX commands to use your host computer---WinTelnet & FTP Pro hides the complexities of UNIX with an easy to use Windows front end interface. It's also loaded with convenient features to make logging on a joy---auto-login profiles, automatic ftp log in, and a complete ftp client are built in!

{ewc D2HTools, D2H_256Color, help0018.bmp} ThumbsPLUS SHAREWARE
\$65.00

This program is designed to view graphic images of almost any format. Although this program is not strictly for the Internet, we have included it because of its fantastic user interface, and its ability to view a large number of pictures in a thumbnail size, at once. While your surfing the 'Net, you will collect many graphic files which you will want to view later. This program is an ideal way to help you catalog, maintain and view these images.

Give it a try, we are sure you will agree, it's a must have program for anyone on the Internet.

The Shareware Demo version can be used for 30 days. After that time you must register the program.

{ewc D2HTools, D2H_256Color, help0019.bmp} WinWeather **SHAREWARE**
\$19.95

WinWeather 2.01 is a shareware program that brings hourly weather reports and forecasts, satellite images, ski reports, even WeatherCams to your PC! With an Internet connection, you'll be able to get the latest weather and weather reports on cities all over the United States and around the world. No need to remember strange Internet addresses---if you can click a mouse, you can use WinWeather!

This program is like having the Weather Channel hooked up to your PC. A great Internet application... try it we are sure you will agree!

{ewc D2HTools, D2H_256Color, help0020.bmp} WinZIP SHAREWARE
\$29.00

What is a "ZIPPED" File? A zipped file is one file that contains one or more files, which have all been compressed. Sound complicated? With WinZip its not!

While on the Internet you will certainly download something, be it a text file, a program, or a graphic. The vast majority of these files are "zipped". When you see a program with the .zip extension, just use WinZip to open it, and it will restore the program to its original uncompressed format.

{ewc D2HTools, D2H_256Color, help0021.bmp} WsFTP LE **FREWARE**

This application is a File Transfer Protocol (FTP) client application for Windows Sockets and was designed to take full advantage of the point and click capabilities of the Windows environment. WS_FTP provides ease of use for the beginner plus a full set of functions for the power user. WS_FTP provides features like retention of site profiles and functions like multi-file transfer using standard windows methods.

There are multiple versions of WS_FTP. Most notable is the existence of a Professional version of WS_FTP and the existence of the Limited Edition version of WS_FTP. The Pro version of WS_FTP offers additional functionality and additional applications for a low cost.

Sound complicated? Its not. With WS_FTP LE using a file transfer protocol (FTP) couldn't be easier. Give this one a try, we are sure you will like it so much you will want to upgrade to PRO version (WsFTP PRO)!
