# **Intranet Apps: a new model for Enterprise Client/Server**

*Jeff Scherb  
Chief Technology  
Officer,  
Dun & Bradstreet  
Software*

## Dun & Bradstreet Software

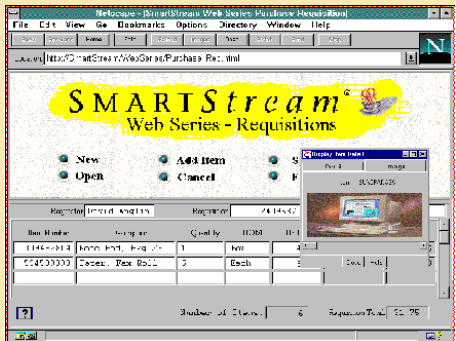

---

- \$370 Million provider of Enterprise Applications Systems:
  - Financials, Manufacturing, HR, DSS
  - Over 4000 customers
- SMART*Stream*Client/Server
  - First with embedded workflow (1991)
  - First with intelligent agents (1992)
  - First support for distributed enterprise (1995)
  - First with Java Intranet clients (1996)

# The SMARTStream Web Series

- Java-based clients for SMARTStream
- First app: Purchase Requisitions
- Beta shipping this week

# SMART *Stream* Web Series: Reinventing Client/Server

---

- Breaking the cost model:
  - Zero-administration clients (browser only) simplify deployment, maintenance
- Breaking the usability model:
  - Zero-training clients use the rich UI capabilities of HTML to provide a “Web Experience” for enterprise app users

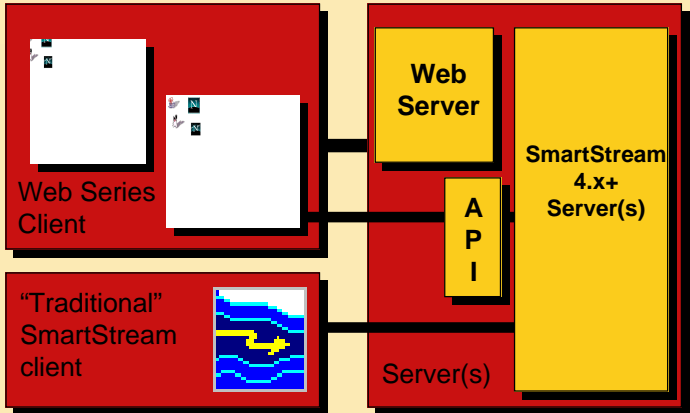

## Breaking the Cost Model of “legacy” Client/Server

---

- Commodity client software (browser)
- Client is simple to maintain
  - Nothing to install
  - Eliminates upgrade and maintenance of gazillions of clients
- Can leverage commodity servers hardware, operating systems and connectivity

# SMART*Stream* Web Series Architecture

# Thoughts On Architecture

---

- Worry about applet download time
  - Modularize application
  - Process on the server as much as possible
- Don't recreate the sins of bad first-generation client/server
  - Don't put all the business logic on the client

# Breaking the Usability Model: Thoughts On UI Design

---

- Think of the audience and purpose of the application
  - Replacement for existing application?
  - Application for new audience?
- Plan to compromise something
- Be aware of multiple browsers

# SMART*Stream* Web Series: UI Design Approach

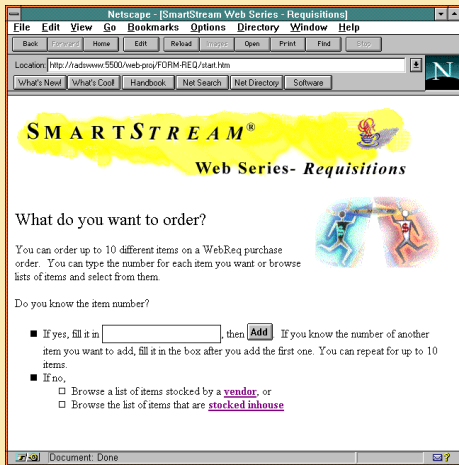

---

- Designed for a “Web experience”
  - You know how to use it when you get there
  - Don’t cram the page full of controls
    - Have a “conversation” with the user instead
  - Avoid gratuitous graphics
    - Every element should add to the user’s understanding of the function of the page

# SMARTStream Web Series “Web Experience” UI (beta 2)

- “Conversation” with the user
- An early prototype:

# SMART*Stream* Web Series: Lessons Learned

---

- Customers are enthusiastically accepting this new cost and usability model
- Don't apply conventional UI rules
- Think about application architecture and worry about applet download time
- This is a release 1.0 world

# Java In The Enterprise: Building Information Capital

*Hal L. Stern,  
Sun Microsystems*

*201 967 6111*

*hal.stern@east.sun.com*

# Four Estates Revisited

---

<b>Clergy</b>	<b>Hollywood</b>	<b>Convergence</b>
<b>Nobility</b>	<b>Wall Street</b>	<b>E-transaction</b>
<b>Commoners</b>	<b>Telco</b>	<b>Deregulation</b>
<b>Journalists</b>	<b>Publishers</b>	<b>Self-publishing</b>

- Marriages force sharing of IT practices
- Hollywood's win: effects & animation

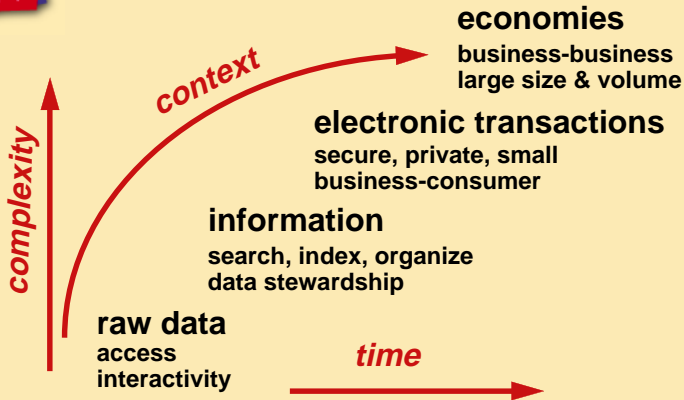

# Information Delivery

---

- Content
  - What is the data? “Just bits?”
- Context
  - How is it presented to user?
- Infrastructure
  - Physical delivery mechanism

# Network Services

# Cost Structure Challenges

---

- Access to broader/secondary markets
- Infrastructure no longer captive or a barrier to entry
- Specialized services, markets of one, aggregations (baskets)
- Branding = education, entertainment and research

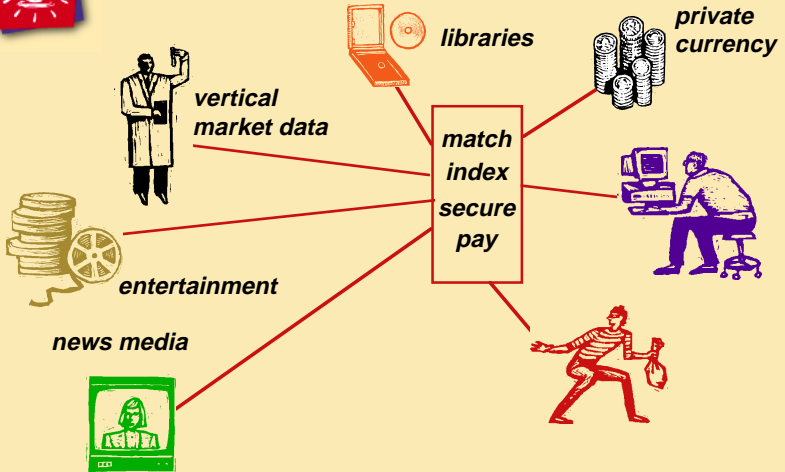

# Upside & Downside

---

- Upside
  - Time to market for product & practice
  - Serving non-traditional customers
- Downside
  - Time, quality and agility pressures
  - Non-standard competitors
  - Email as an exception handler *only*

# Network Services View

# Java Usage Framework

---

	Intranet	Internet
Inform	Richer Contexts	Animation
Transact	IT Encapsulation	Commerce Protocols

# Java Applications

---

- Networked business protocols
  - Distribution: no CD-ROM or diskettes
  - Versioning: no synchronization
  - Reliability and competence
- Interactive applications
  - Animation, video and audio replace social fabric

# Information Cycle

---

*input to decision  
support system*

**Explore**  
*Web browser*

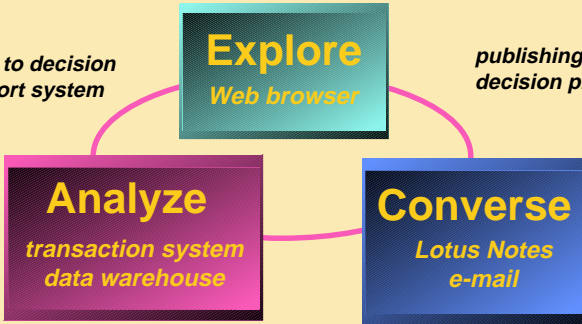

*publishing  
decision process*

**Analyze**

*transaction system  
data warehouse*

**Converse**

*Lotus Notes  
e-mail*

# Enabling Rapid Change

---

- Contact points will become networked
- What is context for exchange of data?

# Three-Tier Flexibility

- Who defines services of mid-tier?
- Java in the middle: next Powerbuilder?

# Deployment Cost Shift

- Reduce cost of *safe entry*
- Competent, rapidly evolving software
