IMPORTANT NOTE:

The EasyMail program (ie: EasyMail Administrator AND EasyMail Client) requires System software of 7.0 or LATER, as well as System 7 File Sharing.

If you do not have this version of System software, the server will not function properly. As well, 2 MB of free memory is required for the program to operate.   This means that you require at lease 4 MB of total memory.   You will also need a MINIMUM of 5 MB of free disk space available AFTER EasyMail is installed.
