A brailler-style typewriter consists of six keys (one for each dot), a space bar, and a linefeed.   To simulate this, Brailler uses six keys on the bottom row of the keyboard (outlined below), the space bar, and the return key.   To type a Braille character, press a combination of the six dot keys; the character will be typed when you release all the keys.

```
    1 4            c ,
  2 5            x .
  3 6            z /
