

ODBC Database Drivers 2.0

License Information

Included into this product is a set of ODBC version 2.0 drivers for accessing a variety of databases. These drivers allow you to access the same data sources as Microsoft Access and Visual Basic. We want to encourage you to include this technology in your applications and to use it for accessing the same data. The license contains a few restrictions that apply to people who are writing applications for commercial distribution.

The following scenarios are within the scope of your license from Microsoft for the product referenced above and do not require a special license from Microsoft.

1. If your software product requires that your end-user license a unit of Microsoft Office, Microsoft Office Professional or any component of Microsoft Office Professional for each unit acquired of your software product, then you can use, reproduce and distribute the ODBC Database Drivers in any software product.
2. If you are creating a software product that will be distributed internally and will not be sold commercially, then you can use, reproduce and distribute the ODBC Database Drivers in that software product.
3. If you do not meet the criteria in items 1 or 2 and your software product is a word processor, spreadsheet or database management system, then you can import or read data from any data source, export or write data to any data source, or store it into any data structure or document that you create.

The following scenarios are NOT within the scope of your license from Microsoft for the product referenced above. If you are developing a software product using such product in a manner as described below please contact Microsoft at 206-703-4515 for applicable license terms.

1. If you are building a query tool that will be a component or feature of a word processor, spreadsheet, or database management system, and this query tool will perform heterogeneous joins or updateable joins, then please call Microsoft for license terms.
2. If you are working with a scenario that we have not explicitly described and you are building a word processor, spreadsheet or database management system, then please call Microsoft for license terms.
