

LineUp Preferences Dialog

In the LineUp Preferences Dialog (accessible from the Apple Menu), there is a radio button option of letting LineUp 1.0 calculate Folder Window heights (in which case the height will be a minimum, but still let all files show, without needing to scroll), or to use the height of the LineUp Window (relationship window) for all sub-Folder Windows in the selected Folder. You can also specify the minimum height and width values for a Folder Window. LineUp 1.0 also takes precautions to insure the "LinedUp" Folder Windows are NOT positioned OFF the screen.
