 Don't use MetaTool - drawers copied don't require MetaTool

1.4 Selection Window - help page

Selection Window

This function opens a window that allows you to select which operation you want to have performed on the chosen object.

1.5 Show information - help page

Show information

This function opens a text window and shows a bit information about the software package.

1.6 Show documentation - help page

Show documentation

This function shows the documentation of the software package you've chosen. If there is no documentation, it will show a bit of information about it.

1.7 Start program - help page

Start program

This function starts the program which belongs to the selected software package. If there is no program, you'll just see a bit of information instead.

1.8 DirOpus 5 Window - help page

DirOpus 5 Window

If you have DirOpus 5 installed, this functions opens a window in DirOpus 5, which shows the selected drawer. Sorry, the rexx port of DirOpus 5 has a missing feature, so it is not possible, to switch this window to show icons rather than text. If you prefer icons, you'll have to use the menu of DirOpus.

1.9 Filer Window - help page

Filer Window

If you have at least OS 2.04 installed, this function will display the selected drawer in one of the lists of Filer. If Filer is not yet in memory, it will be loaded from your Meeting Pearls CD-ROM.

1.10 Copy drawer, show requester - help page

Copy drawer, show requester

If you choose this function, each access will bring up a file requester to choose the destination directory. So it's possible to copy each software package into a different destination directory.

Important: all software packages will be copied into a separate directory.

1.11 Copy drawer, no requester - help page

Copy drawer, no requester

If you choose this function, there will be no file requester. Instead, you should choose the destination directory before starting the first copy action by clicking on this button. So you'll get rid of the annoying file requester, which otherwise will appear every time you want to copy a software package.

Important: all software packages will be copied into a separate directory.

1.12 Insert in hotlist - help page

Insert in hotlist

This function adds the item you've selected to your personal hotlist or removes it on request, if it's already in there.

1.13 Help, what are all these buttons for?

There are three columns for each software package. You can click  on each of these three columns using your mouse. After that, an action will be performed, e.g. a documentation will be shown, a program started, a software package copied, a window opened in DirOpus 5 (if installed) or Filer etc. You can choose which of these actions will be performed by loading

this page and following the instructions there.

Maybe you have notices that you can create your personal hotlist. The easiest way to add an entry to your hotlist is to open the selection window of a software package and to choose "Insert in hotlist" there. So if you have loaded a page which shows software packages in three columns, you should click on the left column if you still have standard preferences in this guide. This is the column which contains the size of the software package. Then the mentioned requester will open. After you have clicked on "Insert in hotlist", the entry will be added to your hotlist. If you have chosen different preferences for the left column, you have to do things in a different way - or reset your configuration before.
